

Dyllan Ostenson

Senior Full Stack Engineer — Mobile & Cloud Platforms

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

PROFESSIONAL SUMMARY

Senior full stack engineer with 12 years delivering production React Native apps, Firebase backends, and PostgreSQL data layers. Experienced architecting dual-service sync between real-time mobile stores and relational query layers with row-level tenant isolation. Proven at reading complete build specs, scoping delivery accurately, and owning architecture end-to-end for healthcare and SaaS platforms.

WORK EXPERIENCE

Senior Software Engineer

Aug/2022 - Mar/2026

TechCrunch

Remote | San Francisco, CA

- Led end-to-end architecture for a multi-tenant care platform spanning **React Native** mobile and a supplementary **React web** console, coordinating structured logging workflows with **offline-first** client patterns.
- Designed **idempotent Cloud Functions** that mirrored every real-time Firestore write into **Supabase Postgres**, unlocking SQL-driven billing computation, operational reports, and cross-facility analytics.
- Implemented **multi-provider authentication** including phone OTP and Google Sign-In flows, setting **custom JWT claims** at login to enforce role-based access across staff and family applications.
- Established mandatory **offline persistence** initialization before Firestore operations, sustaining reliable field data capture across intermittent connectivity environments.
- Built **Firebase Cloud Messaging** pipelines delivering contextual push alerts to staff and family devices, sustaining engagement across **15,000+ monthly active installs**.
- Enforced **row-level security policies** in Postgres for chain, branch, and resident tenant boundaries, satisfying audit requirements for regulated healthcare data handling.
- Integrated **Cloud Storage** workflows for voice notes, care photos, and document exports using signed URL access and retention controls aligned to compliance needs.
- Produced technical read-back estimates from complete build specifications, scoping **solo 12-week delivery plans** with explicit risk, dependency, and staffing recommendations for leadership review.

Senior Fullstack Engineer

Oct/2020 - Jul/2022

Golden Technology

Remote | Glendale, OH

- Architected a **React Native** shipment tracking application with real-time location updates and **offline queue replay** for drivers operating in low-connectivity regions.
- Built **Firebase Auth** and Firestore services processing **8,000+ daily operational events** across dispatch, proof-of-delivery, and exception handling workflows.
- Developed **Cloud Functions sync jobs** replicating mobile-origin writes into a **PostgreSQL warehouse** for billing snapshots and route performance analytics.
- Established **Supabase RLS policies** segregating carrier, depot, and customer tenant boundaries across multi-branch logistics operations.
- Delivered a complementary **React web console** for dispatch managers covering scheduling, fleet visibility, and exception resolution dashboards.
- Owned technical design from finalized client specifications, delivering milestone-based execution without open-ended discovery cycles.
- Reduced cross-store sync failures by **35%** through **idempotent write reconciliation** and conflict-safe retry logic between mobile and backend layers.
- Mentored two engineers on mobile state management and dual-datastore patterns, improving release stability across concurrent platform updates.

Fullstack Developer

Jun/2018 - Sep/2020

IgniteTech

Remote | Austin, TX

- Developed **React** and **React Native** modules for a B2B SaaS workspace platform serving **200+ enterprise accounts** with role-aware dashboards.
- Integrated **Firestore Authentication** and real-time listeners enabling collaborative updates across mobile and web client surfaces.
- Built **Node.js REST APIs** backed by PostgreSQL, supporting tenant-scoped queries and exportable reporting for customer success teams.
- Shipped **push notification** workflows via Firebase Cloud Messaging with topic-based routing for administrative alert cohorts.
- Contributed to sprint planning and code review practices that helped drive a **25% reduction** in production incident volume over two quarters.

Frontend Developer

Feb/2014 - May/2018

Duda

Onsite | Louisville, CO

- Built responsive **React** UI components for a website builder platform powering **1M+ small business sites** worldwide.
- Developed **JavaScript** widget libraries and editor extensions that streamlined template customization for non-technical publisher users.
- Improved frontend rendering performance, reducing **largest contentful paint by 20%** across high-traffic editor and preview surfaces.
- Partnered with backend engineers to integrate **REST APIs** for dynamic content publishing, form capture, and analytics instrumentation.
- Authored **Jest** unit and integration tests maintaining **85%+ coverage** on mission-critical editor modules.

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

SKILLS

Frontend: React Native, React, TypeScript, JavaScript, HTML5, CSS3, Redux, Mobile Offline Patterns, Responsive Web UI

Backend: Node.js, Firebase Cloud Functions, REST APIs, Express, Serverless Architecture, JWT Authentication

Databases: Firestore, Supabase, PostgreSQL, Row-Level Security, Idempotent Sync/ETL, Relational Data Modeling

Cloud & DevOps: Firebase (Auth, Storage, Cloud Messaging), Supabase, AWS, CI/CD Pipelines, Docker

Monitoring & Tools: Firebase Analytics, Google Analytics, Sentry, Git, Jest, Postman

Workflow & PM: Agile/Scrum, Technical Scoping, Spec Read-back, Jira, Cross-functional Collaboration

CERTIFICATIONS

- Google Analytics Individual Qualification

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Owned full stack delivery of a **HIPAA-aligned care management system** combining React Native field apps, a React admin portal, and dual Firestore-Postgres data layers.
- Implemented **AI-assisted documentation** workflows for care notes and incident summaries, reducing manual entry time for clinical staff by **30%**.
- Designed **tenant-isolated Postgres schemas** with row-level security mirroring real-time mobile writes for billing, compliance reporting, and audit trails.

Shipment & Logistics Platform (Real-Time Tracking System)

- Built a **real-time tracking platform** with React Native driver apps and a React dispatch console, processing live GPS and delivery status across multi-depot operations.

- Engineered **offline-capable mobile capture** with background sync into Firestore and a mirrored PostgreSQL layer for route analytics and invoice generation.
- Delivered **push notification** and exception alert flows that improved on-time delivery visibility for operations teams managing **500+ daily shipments**.
