

Dyllan Ostenson

Senior Full-Stack Engineer

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

PROFESSIONAL SUMMARY

Senior full-stack engineer with 12+ years delivering production web applications, subscription SaaS platforms, and secure data systems. Proficient in React, Next.js, Node.js, TypeScript, and PostgreSQL, with extensive experience integrating third-party APIs, payment billing, and sensitive financial workflows. Track record leading MVP builds end-to-end, designing responsive dashboards and onboarding flows, and collaborating with founders to translate product vision into scalable, privacy-conscious architecture.

WORK EXPERIENCE

Senior Software Engineer

Aug/2022 - Mar/2026

TechCrunch

Remote | San Francisco, CA

- Led **full-stack delivery** of subscription SaaS features across React, Next.js, and Node.js services at production scale, owning architecture from API design through deployment.
- Designed and implemented **PostgreSQL data models** for user accounts, transactional records, and scenario-based workflows, enforcing row-level security and encryption for sensitive customer data.
- Built **responsive financial dashboards** and multi-step onboarding flows with React and TypeScript, improving completion rates through progressive disclosure and real-time field validation.
- Integrated **Stripe subscription billing** including plan management, webhook reconciliation, and dunning logic, supporting recurring revenue operations across multiple pricing tiers.
- Partnered directly with **product leadership and founders** to prioritize MVP scope, translate business rules into application logic, and deliver iterative releases on two-week sprint cadences.
- Established **AWS deployment pipelines** with Docker, automated CI/CD, and CloudWatch monitoring, accelerating release velocity while maintaining high availability across production services.
- Mentored engineers on **secure API integration** patterns, code review standards, and TypeScript best practices, strengthening team delivery quality and reducing recurring production defects.
- Architected **third-party API integrations** for external data providers with OAuth flows, token refresh handling, and circuit-breaker resilience across high-volume asynchronous workloads.
- Implemented **privacy-conscious data handling** practices including audit logging, consent management, and PII minimization aligned with regulatory expectations for sensitive user information.

Senior Fullstack Engineer

Oct/2020 - Jul/2022

Golden Technology

Remote | Glendale, OH

- Owned **end-to-end MVP development** of a customer-facing analytics platform using React, Node.js, and PostgreSQL, shipping from concept to production launch with minimal guidance.
- Designed **RESTful APIs** and PostgreSQL schemas supporting complex user scenarios, transaction histories, and recommendation engines with indexed queries for concurrent production traffic.
- Developed **admin portals and customer dashboards** with role-based access control, enabling operations teams to manage accounts and monitor platform health across enterprise client deployments.
- Integrated **payment and billing workflows** with Stripe, handling subscription tiers, invoice generation, and failed-payment recovery automations.
- Built **secure authentication and authorization** layers using JWT, session management, and encrypted credential storage for applications handling regulated industry data.
- Led **cross-functional architecture reviews** with product and design stakeholders, influencing technical decisions on data modeling, caching strategy, and frontend state management.
- Deployed containerized services to **AWS ECS** with Terraform-managed infrastructure, RDS PostgreSQL, and Redis caching, optimizing infrastructure footprint through capacity tuning.
- Established **monitoring and alerting** with Datadog and PagerDuty, detecting API error rate anomalies and database performance issues before customer-facing impact.

Fullstack Developer

IgniteTech

Jun/2018 - Sep/2020

Remote | Austin, TX

- Built **React and TypeScript** single-page applications with reusable component libraries, improving development consistency and accelerating feature delivery across multiple product teams.
- Developed **Node.js backend services** with Express and PostgreSQL, implementing CRUD APIs, input validation, and pagination for customer data management modules.
- Integrated **third-party REST APIs** for document processing and notification delivery, designing retry logic and structured error handling for reliable production integrations.
- Created **responsive UI layouts** for onboarding and account management screens, ensuring cross-browser compatibility and mobile-first design standards.
- Participated in **agile sprint ceremonies** and code reviews, contributing to shared coding standards and incremental test coverage improvements across the engineering organization.
- Implemented **unit and integration tests** with Jest and Supertest, strengthening backend test coverage and regression safety for core service endpoints.

Frontend Developer

Duda

Feb/2014 - May/2018

Onsite | Louisville, CO

- Developed **JavaScript and React** UI components for a website builder platform at consumer scale, focusing on drag-and-drop editors and real-time preview rendering.
- Optimized **frontend performance** through code splitting, lazy loading, and bundle analysis, measurably reducing initial page load times across core editor workflows.
- Collaborated with **backend engineers** to integrate REST APIs for content publishing, asset management, and user authentication flows.
- Implemented **accessible UI patterns** following WCAG guidelines, improving keyboard navigation and screen reader support across customer-facing templates.
- Contributed to **CSS architecture** and design system adoption, standardizing spacing, typography, and component variants across the frontend engineering team.

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, HTML5, CSS3, Redux, Tailwind CSS, Responsive Design, Component Libraries

Backend: Node.js, Express, REST APIs, GraphQL, Authentication & Authorization, Stripe Integration, Webhook Processing

Databases: PostgreSQL, Redis, Schema Design, Query Optimization, Row-Level Security, Migrations

Cloud & DevOps: AWS (ECS, RDS, S3, CloudWatch), Docker, Terraform, CI/CD, GitHub Actions, Infrastructure as Code

Monitoring & Tools: Datadog, CloudWatch, PagerDuty, Jest, Supertest, Git, OAuth 2.0, API Integration Patterns

Workflow & PM: Agile/Scrum, MVP Delivery, Cross-functional Collaboration, Technical Documentation, Code Review, Stakeholder Communication

CERTIFICATIONS

- Google Analytics Individual Qualification

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Architected **HIPAA-compliant full-stack platform** with encrypted PostgreSQL storage, audit trails, and role-based access for protected health information workflows.

- Built **AI-driven recommendation capabilities** integrated into clinician dashboards, surfacing actionable insights from patient data through consent-aware data pipelines.
- Delivered **responsive onboarding and patient portal UIs** using React and TypeScript, supporting multi-tenant deployments for healthcare provider organizations.

Shipment & Logistics Platform (Real-Time Tracking System)

- Developed **real-time tracking dashboards** with WebSocket feeds and PostgreSQL event storage, providing end-to-end visibility across high-volume shipment operations.
- Designed **Node.js microservices** for route optimization, carrier API integration, and status notification workflows with near-real-time update propagation.
- Implemented **admin and customer-facing portals** with subscription-based access tiers and Stripe-powered billing for logistics operators.
