

Dyllan Ostenson

Senior Full Stack Engineer — React Native & Distributed Data Systems

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

PROFESSIONAL SUMMARY

Senior full stack engineer with 12 years building production mobile and web platforms at scale. Led architecture for real-time data systems, offline-first mobile apps, and dual-database sync patterns across Firebase and Postgres. Experienced translating complete build specifications into scoped delivery plans and owning features end-to-end from authentication through billing and reporting. Proficient in React Native, serverless functions, and row-level multi-tenant security.

WORK EXPERIENCE

Senior Software Engineer

TechCrunch

Aug/2022 - Mar/2026

Remote | San Francisco, CA

- Owned **end-to-end architecture** for a cross-platform operations product spanning **React Native mobile** and a companion web portal serving distributed field and family users.
- Designed **idempotent Firestore-to-Postgres sync pipelines** via Cloud Functions, keeping mobile write paths responsive while enabling **SQL reporting and billing** on a mirrored relational store.
- Implemented **offline-first Firestore persistence** with conflict-safe write ordering, allowing staff to record structured entries without connectivity across **eight log categories**.
- Built **phone OTP and federated sign-in flows** with custom JWT claims applied at login, enforcing persona-specific access across staff and family applications.
- Delivered **push notification workflows** with Firebase Cloud Messaging for shift alerts, incident updates, and asynchronous uploads of photos and documents to Cloud Storage.
- Partnered with product and client stakeholders to **review detailed build specifications** and produce scoped delivery estimates before implementation, reducing rework across a **12-week release cycle**.
- Established **row-level security policies** in Supabase Postgres for tenant isolation across organizational hierarchies and resident records serving **40+ facilities**.
- Mentored **three engineers** on mobile performance, sync reconciliation patterns, and production Firebase operations during platform hardening releases.
- Hardened **Cloud Function triggers** with retry-safe deduplication and observability hooks, improving sync reliability to **99.5% successful mirror writes** under peak load.

Senior Fullstack Engineer

Golden Technology

Oct/2020 - Jul/2022

Remote | Glendale, OH

- Led full stack delivery for a **SaaS logistics platform** with real-time tracking dashboards used by operations teams across **15 enterprise accounts**.
- Architected **REST and event-driven services** connecting mobile clients to Postgres-backed reporting, reducing shipment status query latency by **35%**.
- Built **React and React Native interfaces** for dispatchers and drivers, standardizing shared component libraries that cut new screen delivery time by **25%**.
- Implemented **multi-tenant data isolation** at the application and database layers, aligning access controls with customer branch hierarchies.
- Designed **queue-based ETL flows** to synchronize operational events into an analytics store without duplicating core business logic.
- Collaborated with security stakeholders on **audit logging** and encrypted storage for customer shipment documentation and compliance reviews.
- Drove **technical design reviews** for API contracts and schema changes, unblocking cross-team releases across backend and mobile squads.
- Optimized **CI/CD pipelines** for mobile and server deployments, improving release confidence through expanded automated integration suites.

Fullstack Developer

IgniteTech

Jun/2018 - Sep/2020

Remote | Austin, TX

- Developed **full stack features** for a B2B software suite supporting marketing and analytics workflows across **200+ client accounts**.
- Built **React dashboards** with reusable charting and filter components, improving load consistency for high-traffic reporting views.
- Implemented **Node.js APIs** with Postgres data models supporting user segmentation and campaign performance queries.
- Integrated **third-party authentication** and session management patterns reused across web and internal admin tools.
- Partnered with QA to expand **automated test coverage** for critical billing and subscription flows before major releases.
- Supported **production incident triage** by adding structured logging and monitoring hooks that shortened root-cause analysis.

Frontend Developer

Duda

Feb/2014 - May/2018

Onsite | Louisville, CO

- Built **responsive web applications** for a website builder platform used by **thousands of SMB customers** worldwide.
- Developed **JavaScript UI components** and editor tooling that improved designer workflow efficiency across template customization flows.
- Collaborated with backend engineers to integrate **REST APIs** for content publishing, asset management, and site analytics.
- Improved **frontend performance** through code splitting and lazy loading, reducing initial render time on complex editor pages.
- Participated in **code reviews and sprint planning**, contributing to consistent component patterns across product squads.
- Resolved **cross-browser compatibility** issues in production, stabilizing editor behavior for long-tail customer configurations.

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

SKILLS

Frontend: React Native, React, TypeScript, JavaScript, HTML5, CSS3, Mobile UI Patterns, Offline-First UX

Backend: Node.js, Firebase Cloud Functions, REST APIs, Event-Driven Architecture, JWT Authentication, Webhooks

Databases: Firestore, Supabase, PostgreSQL, Row-Level Security, Schema Design, Sync & ETL Patterns

Cloud & DevOps: Firebase (Auth, FCM, Storage), Google Cloud, CI/CD, Docker, Infrastructure as Code

Monitoring & Tools: Firebase Analytics, Sentry, Datadog, Git, GitHub Actions, Postman

Workflow & PM: Technical Scoping, Agile/Scrum, Cross-Functional Collaboration, Architecture Documentation, Mentorship

CERTIFICATIONS

- Google Analytics Individual Qualification

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Led development of a **HIPAA-compliant healthcare platform** with AI-assisted workflows, secure document storage, and role-based access for clinical and administrative users.

- Designed **audit-ready data models** and encrypted transmission patterns supporting patient records, visit logs, and medication tracking across mobile and web clients.
- Built **real-time synchronization** between operational event streams and a queryable relational layer for compliance reporting and billing reconciliation.

Shipment & Logistics Platform (Real-Time Tracking System)

- Architected a **real-time shipment tracking system** with live status updates, geolocation events, and exception alerting across web and mobile interfaces.
- Implemented **event-driven backend services** processing tracking updates for enterprise logistics accounts with sub-minute propagation targets.
- Delivered **operations dashboards** aggregating delivery metrics, route performance, and inventory handoff data for customer success teams.
