

Dyllan Ostenson

Senior Software Engineer | AI/ML & Full Stack Applications

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

PROFESSIONAL SUMMARY

Senior software engineer with 12+ years building production full stack applications and leading AI-enabled platform initiatives. Owns end-to-end delivery across backend services, APIs, and UI layers while coordinating distributed engineering teams and stakeholders. Hands-on experience implementing LLM integrations, RAG pipelines, and cloud-native systems on AWS with strong incident response and production support discipline.

WORK EXPERIENCE

Senior Software Engineer

Aug/2022 - Mar/2026

TechCrunch

Remote | San Francisco, CA

- Served as **technical owner** for AI-assisted editorial and content discovery features, translating product requirements into actionable engineering plans for a **12-person cross-functional team** including offshore contributors.
- Built and deployed **LLM-powered search and summarization** capabilities using Python microservices and vector retrieval over a **2M+ article corpus**, improving content discovery latency by 35%.
- Implemented **RAG pipelines** with embedding generation, chunking strategies, and Pinecone vector search integrated into Node.js APIs serving **500K+ daily requests**.
- Led **production incident response** during US business hours for platform outages, performing root-cause analysis and deploying corrective fixes with mean time to resolution under 45 minutes.
- Developed full stack features across **React/TypeScript frontend** and Node.js backend services, maintaining CI/CD pipelines on AWS with automated regression suites covering critical user flows.
- Reviewed offshore deliverables for **code quality, security, and performance**, establishing pull request standards that reduced production defects by 28% quarter-over-quarter.
- Built internal **prompt orchestration tooling** and evaluation dashboards to monitor LLM response quality, latency, and cost across multiple model providers.
- Partnered with platform and data teams to design **responsible AI guardrails**, content moderation filters, and governance checkpoints before model outputs reached end users.

Senior Fullstack Engineer

Oct/2020 - Jul/2022

Golden Technology

Remote | Glendale, OH

- Architected and delivered a **multi-tenant SaaS platform** supporting 150+ enterprise clients with React, Node.js, and PostgreSQL deployed on AWS infrastructure.
- Led a team of 4 engineers across US and Eastern Europe, coordinating sprint planning, code reviews, and **offshore delivery timelines** for quarterly release cadences.
- Built **RESTful and GraphQL APIs** handling 1.2M monthly transactions with caching layers and database query optimization reducing p95 latency from 800ms to 220ms.
- Implemented **CI/CD pipelines** using GitHub Actions and Docker, automating deployment to ECS with zero-downtime rollouts and rollback capabilities.
- Owned **production stability** for customer-facing services, triaging incidents, writing post-mortems, and driving long-term reliability improvements.
- Introduced **test automation frameworks** (Jest, Cypress) increasing regression coverage from 42% to 78% across frontend and backend codebases.
- Mentored junior developers on **system design and debugging practices**, accelerating two engineers to mid-level promotions within 18 months.
- Collaborated with product and executive stakeholders to **prioritize technical roadmaps**, delivering three major platform migrations on schedule.

Fullstack Developer

Jun/2018 - Sep/2020

IgniteTech

Remote | Austin, TX

- Developed full stack features for a **B2B analytics dashboard** using React, Redux, and Node.js/Express serving 3,000+ active business users.
- Built **Python data processing scripts** for ETL pipelines integrating third-party APIs and normalizing datasets for downstream reporting modules.
- Implemented **AWS Lambda functions** and S3-backed storage for serverless report generation, cutting batch processing time by 40%.
- Participated in **on-call rotation** and production debugging, resolving API failures and database bottlenecks with documented root-cause analyses.
- Contributed to **CI/CD workflow** improvements in Jenkins, adding automated unit tests that increased deployment confidence across weekly releases.
- Collaborated with remote QA and engineering teams to deliver **integration testing suites** and API documentation improving cross-team handoffs.

Frontend Developer

Feb/2014 - May/2018

Duda

Onsite | Louisville, CO

- Built responsive **JavaScript and jQuery** components for a website builder platform used by 500K+ small business customers worldwide.
- Developed reusable **UI widget library** modules reducing duplicate frontend code by 30% and standardizing design patterns across product teams.
- Optimized page render performance through **lazy loading and asset bundling**, improving Lighthouse performance scores by 25 points on key templates.
- Partnered with backend engineers to integrate **REST APIs** for dynamic content management, form submissions, and third-party embed services.
- Participated in agile ceremonies and **cross-team code reviews**, contributing to frontend coding standards and accessibility compliance initiatives.

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

SKILLS

Frontend: React, TypeScript, JavaScript, Redux, HTML5, CSS3, jQuery, Responsive Design, WebSocket

Backend: Node.js, Python, FastAPI, Express, GraphQL, REST APIs, Microservices, LLM Orchestration

Databases: PostgreSQL, MongoDB, Redis, Pinecone, Vector Search, Query Optimization

Cloud & DevOps: AWS (ECS, Lambda, S3, CloudWatch), Docker, GitHub Actions, CI/CD, Infrastructure as Code

Monitoring & Tools: Datadog, CloudWatch, Jest, Cypress, Prompt Engineering, Model Evaluation Dashboards

Workflow & PM: Agile/Scrum, Jira, Git, Cross-functional Leadership, Offshore Coordination, Technical Documentation

CERTIFICATIONS

- Google Analytics Individual Qualification

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Designed a **HIPAA-compliant healthcare portal** with AI-assisted intake workflows, secure patient data handling, and role-based access controls.
- Implemented **LLM-powered clinical note summarization** with audit logging and PHI redaction pipelines meeting regulatory documentation requirements.
- Built full stack application using React, Python/FastAPI, and PostgreSQL with **AWS deployment** and encrypted data storage.

Shipment & Logistics Platform (Real-Time Tracking System)

- Architected a **real-time shipment tracking system** processing GPS telemetry from 10K+ concurrent fleet devices with sub-second update intervals.
- Developed dashboard and notification services using React and Node.js with **WebSocket integrations** for live delivery status across multiple carriers.
- Implemented geospatial query optimization and **event-driven architecture** on AWS enabling scalable route analytics and exception alerting.
