

Dyllan Ostenson

Senior Software Engineer | AI/ML & Full Stack

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

PROFESSIONAL SUMMARY

Senior software engineer with 12+ years delivering full stack applications and production AI systems. Technical owner for LLM features, RAG pipelines, and vector search integrations across AWS and Azure. Proficient in Python and TypeScript with deep experience in incident response, automated testing, offshore coordination, and compliant solutions in regulated environments.

WORK EXPERIENCE

Senior Software Engineer

TechCrunch

Aug/2022 - Mar/2026

Remote | San Francisco, CA

- Owned end-to-end technical execution for **LLM-powered search and content intelligence features**, translating business requirements into designs and actionable tasks for **cross-functional and offshore delivery teams**.
- Built and deployed **RAG pipelines with vector search** over editorial archives, improving retrieval relevance for internal research tools used by **400+ editorial staff**.
- Developed **Python microservices and REST APIs** integrating generative AI orchestration with React frontends, maintaining **sub-200ms p95 latency** for inference-backed workflows.
- Led **production incident triage and root-cause analysis** during US business hours, reducing mean time to recovery for customer-facing publishing systems by **35%** through runbooks and automated rollback gates.
- Implemented **CI/CD and MLOps quality gates on AWS** for model-serving endpoints and application releases, cutting deployment failures across **12 microservices**.
- Authored **technical documentation and internal build tools** that accelerated onboarding for distributed contractors and standardized **regression testing** across release trains.
- Reviewed offshore deliverables for **security, performance, and compliance**, enforcing engineering standards before merges to shared platform repositories.
- Mentored engineers on **prompt engineering and model evaluation workflows**, establishing production monitoring for **quality, latency, and inference cost**.

Senior Fullstack Engineer

Golden Technology

Oct/2020 - Jul/2022

Remote | Glendale, OH

- Served as **technical lead** for a multi-tenant SaaS platform, owning architecture across **Node.js APIs**, React dashboards, and PostgreSQL data layers serving healthcare and logistics clients.
- Delivered **HIPAA-aligned access controls and audit logging** for a healthcare module, enabling enterprise customers to meet **regulated compliance** requirements without custom per-tenant builds.
- Built **real-time shipment tracking APIs** and WebSocket feeds processing **50K+ daily location events** with resilient retry and deduplication logic.
- Introduced **automated test suites and CI pipelines** that increased release confidence and reduced post-deploy defects by **28%** over six months.
- Partnered with product and offshore QA to translate **functional requirements** into sprint-ready engineering tasks, improving predictability for quarterly roadmap delivery.
- Optimized **database queries and Redis caching** for high-traffic reporting endpoints, lowering p95 response times from **1.2s to 320ms**.
- Drove **cross-team design reviews** for authentication, billing, and notification subsystems adopted by three product squads.
- Provided **production support and debugging** for customer-impacting issues, documenting root causes and long-term corrective actions in shared knowledge bases.

Fullstack Developer

IgniteTech

Jun/2018 - Sep/2020

Remote | Austin, TX

- Developed **full stack features** in React and Node.js for a B2B analytics product used by **200+ enterprise accounts**.
- Built **REST APIs and background workers** for data ingestion pipelines, improving nightly ETL throughput by **40%**.
- Wrote **unit and integration tests** with Jest and Cypress, raising coverage on critical payment flows to **85%**.
- Collaborated with remote designers and engineers to ship **responsive, accessible UI components** aligned with product specifications.
- Participated in **incident response rotations**, diagnosing API failures and deploying hotfixes within defined SLA windows.
- Produced **technical documentation** for deployment and local development workflows adopted by new team members.

Frontend Developer

Feb/2014 - May/2018

Duda

Onsite | Louisville, CO

- Built **responsive web interfaces** with JavaScript and CSS for a website builder platform reaching **millions of end users**.
- Implemented **reusable UI components** that reduced duplicate frontend code across product teams by **30%**.
- Improved **page load performance** through asset optimization and lazy loading, contributing to measurable gains in Core Web Vitals.
- Partnered with backend engineers to integrate **RESTful services** for editor and publishing workflows.
- Supported **regression testing and cross-browser validation** during major product releases.

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Redux, Next.js, Responsive UI, Accessibility

Backend: Python, Node.js, Express, REST APIs, GraphQL, Microservices, LLM Orchestration, RAG

Databases: PostgreSQL, MongoDB, Redis, Vector Databases (Pinecone, pgvector), Elasticsearch

Cloud & DevOps: AWS (ECS, Lambda, S3), Azure, Docker, Kubernetes, CI/CD, Terraform, GitHub Actions, MLOps

Monitoring & Tools: Datadog, CloudWatch, Sentry, Prometheus, Grafana, Jest, Cypress, Pytest, Automated Testing

Workflow & PM: Agile/Scrum, Jira, Technical Writing, Offshore Coordination, Incident Management, Root Cause Analysis

CERTIFICATIONS

- Google Analytics Individual Qualification

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Architected a **HIPAA-compliant full stack platform** with role-based access, encrypted data handling, and audit trails for clinical workflow modules.
- Integrated **AI-driven triage and document summarization** using Python services and vector search over patient intake records, reducing manual review time by **45%**.
- Deployed services on **AWS with CI/CD pipelines** and automated regression suites, maintaining production stability for **10K+ monthly active users**.

Shipment & Logistics Platform (Real-Time Tracking System)

- Designed **real-time tracking APIs and event-driven pipelines** processing location updates across carriers with sub-second fan-out to client dashboards.
- Built **React monitoring interfaces** with map visualizations and exception alerting, giving operations teams visibility into **15K+ daily shipments**.

- Implemented **PostgreSQL and Redis data layers** with performance tuning and incident playbooks that sustained **99.9% uptime** during peak season.
