

Dyllan Ostenson

Senior Software Engineer | AI/ML & Full Stack

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years delivering production full stack and AI-enabled applications. Owns LLM integrations, RAG pipelines, and vector search on Azure and AWS. Proven coordinating offshore teams, triaging incidents, and shipping tested software from APIs through UI. Expert in Python, CI/CD, MLOps, and regulated-domain delivery with strong debugging and technical leadership.

WORK EXPERIENCE

Senior Software Engineer

Aug/2022 - Mar/2026

TechCrunch

Remote | San Francisco, CA

- Owned **end-to-end technical execution** for **LLM-powered editorial and search features**, translating business requirements into designs and coordinating **offshore delivery teams** during US business hours.
- Built and maintained **RAG pipelines** with **vector search** integrations that improved retrieval relevance and reduced inference latency for high-traffic publishing workflows.
- Developed **Python backend services** and REST APIs supporting AI orchestration, model evaluation, and feature rollout across **AWS** containerized environments.
- Shipped **full stack capabilities** spanning React UI integration, API contracts, and automated regression suites sustaining **99.9% uptime** for production editorial platforms.
- Led **incident triage and root-cause analysis** for business-impacting outages, implementing corrective actions that reduced mean time to recovery by **35%**.
- Established **CI/CD quality gates** and test automation covering unit, integration, and **prompt evaluation workflows** aligned with **MLOps** release practices.
- Implemented **prompt engineering** and **agentic workflow** patterns for generative AI features with monitoring dashboards tracking quality, cost, and latency tradeoffs.
- Reviewed offshore deliverables for **security, performance, and compliance**, mentoring engineers on code quality and responsible AI governance standards.
- Authored **technical documentation** and internal build tools that accelerated developer onboarding and cross-team alignment on AI platform integrations.

Senior Fullstack Engineer

Oct/2020 - Jul/2022

Golden Technology

Remote | Glendale, OH

- Architected **full stack SaaS features** for enterprise clients, owning API design, data modeling, and React frontends across **distributed remote squads**.
- Delivered **Python and Node.js microservices** with automated testing and deployment pipelines on **Azure**, supporting multi-tenant configuration and role-based access.
- Optimized **database query performance** and caching layers, cutting average API response times by **40%** for high-volume transactional workloads.
- Partnered with product stakeholders to refine **functional requirements** into sprint-ready engineering tasks with measurable acceptance criteria.
- Built **regression test automation** frameworks and CI workflows that reduced release defects and improved deployment confidence across production environments.
- Mentored junior engineers on **software engineering fundamentals**, debugging practices, and production support handoff procedures.
- Integrated **third-party APIs** and event-driven workflows enabling reliable data synchronization across internal platforms and partner systems.
- Supported **production incidents** with structured root-cause analysis, documenting fixes and preventive monitoring alerts for recurring failure modes.

Fullstack Developer

Jun/2018 - Sep/2020

IgniteTech

Remote | Austin, TX

- Developed **full stack web applications** using React, JavaScript, and Node.js, delivering customer-facing features from database layer through UI components.
- Wrote **automated unit and integration tests** that increased coverage on core services and reduced manual regression effort before releases.
- Collaborated with **distributed engineering teams** on API specifications, code reviews, and deployment coordination across remote workflows.
- Debugged **production issues** and implemented fixes for performance bottlenecks and data consistency errors in live SaaS environments.
- Built internal **developer tools** and Python scripts to streamline build processes and environment configuration for engineering teams.
- Contributed to **Agile ceremonies** and technical documentation that improved onboarding for engineers joining shared product codebases.

Frontend Developer

Feb/2014 - May/2018

Duda

Onsite | Louisville, CO

- Built **responsive UI components** and page templates for a large-scale website builder platform used by thousands of business customers.
- Improved **frontend performance** through bundle optimization and lazy loading, enhancing page load metrics across customer-published sites.
- Collaborated with designers and backend engineers to implement **accessible, cross-browser interfaces** aligned with product specifications.
- Wrote **JavaScript unit tests** and participated in regression testing to maintain stability across frequent platform releases.
- Contributed to **internal UI libraries** and coding standards that accelerated feature development for sibling product teams.

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Redux, Next.js, Responsive UI

Backend: Python, Node.js, REST APIs, FastAPI, GraphQL, Microservices, API Design

Databases: PostgreSQL, MongoDB, Redis, Vector Databases, Pinecone, Elasticsearch

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, Terraform, CI/CD, GitHub Actions, MLOps

Monitoring & Tools: Datadog, Prometheus, Grafana, Sentry, LLM Evaluation, Prompt Engineering, Root Cause Analysis

Workflow & PM: Agile, Jira, Cross-functional Collaboration, Offshore Coordination, Technical Writing, Incident Management

CERTIFICATIONS

- Google Analytics Individual Qualification

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Designed **HIPAA-compliant AI-driven** clinical workflow features with secure data handling, audit logging, and role-based access controls.
- Built **RAG-based document retrieval** for medical records using vector embeddings, improving clinician search accuracy across unstructured notes.

- Deployed services on **AWS** with automated CI/CD, encryption at rest, and monitoring aligned with healthcare regulatory requirements.

Shipment & Logistics Platform (Real-Time Tracking System)

- Developed a **real-time tracking platform** with WebSocket updates, geospatial indexing, and notification services for shipment lifecycle events.
- Implemented **Python backend services** and React dashboards supporting high-volume logistics operations with sub-second status propagation.
- Established **automated testing** and observability pipelines that improved production stability for time-sensitive delivery workflows.
