

# Dyllan Ostenson

Senior Software Engineer | Full Stack & AI/ML

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

## PROFESSIONAL SUMMARY

---

Senior software engineer with 10+ years building production full stack systems and AI-enabled applications. Hands-on technical owner across Python backends, React frontends, and LLM integrations including RAG pipelines and vector search. Proven delivery across distributed teams, offshore coordination, and US-hours production support with strong incident response and root-cause analysis. Experienced in Azure and AWS, CI/CD automation, and regulated domains including HIPAA-compliant healthcare platforms.

## WORK EXPERIENCE

---

### Senior Software Engineer

Aug/2022 - Mar/2026

#### TechCrunch

Remote | San Francisco, CA

- Owned end-to-end delivery of **LLM-powered content and search features** spanning Python microservices, React UI, and vector retrieval layers serving millions of monthly readers.
- Architected and shipped **RAG pipelines with vector search** to surface contextual articles and recommendations, improving engagement across primary product surfaces.
- Served as **US-hours technical owner** for production AI-enabled applications, triaging incidents, coordinating offshore fixes, and implementing durable corrective actions.
- Built and maintained **REST and GraphQL APIs** in Python and Node.js with automated regression suites, quality gates, and deployment pipelines on AWS infrastructure.
- Led **cross-functional technical design** sessions with product and platform teams, translating business requirements into actionable tasks for distributed delivery groups.
- Implemented **prompt engineering and LLM orchestration** patterns for generative features, including evaluation hooks for latency, cost, and output quality monitoring.
- Reviewed offshore pull requests and infrastructure changes for **security, performance, and compliance**, establishing review standards adopted across the engineering organization.
- Developed internal **developer tooling and documentation** that reduced onboarding time and improved alignment between onshore and offshore contributors.
- Optimized **cloud infrastructure reliability and cost** on AWS through pipeline hardening, containerized deployments, and proactive observability dashboards.

### Senior Fullstack Engineer

Oct/2020 - Jul/2022

#### Golden Technology

Remote | Glendale, OH

- Delivered **full stack features** across React frontends and Python/Node backends for a B2B SaaS platform serving enterprise clients nationwide.
- Built **RESTful API integrations** and data synchronization layers supporting high-volume transactional workflows with sub-second response targets.
- Owned **production debugging and root-cause analysis** for customer-impacting defects, reducing mean time to resolution through structured incident runbooks.
- Established **automated test suites** covering unit, integration, and end-to-end paths that increased release confidence across monthly deployment cycles.
- Collaborated with **distributed engineering teams** to decompose requirements, sequence deliverables, and maintain quality across parallel workstreams.
- Implemented **CI/CD pipelines** with Docker containerization enabling consistent builds and faster rollback capabilities across staging and production.
- Mentored junior engineers on **API design, React patterns, and testing practices**, accelerating their contribution to core product modules.
- Migrated legacy modules to **modern TypeScript and Python service layers**, improving maintainability and reducing defect rates in critical paths.

## Fullstack Developer

Jun/2018 - Sep/2020

### IgniteTech

Remote | Austin, TX

- Developed **full stack web applications** using React, JavaScript, and Python for internal tooling and customer-facing portals.
- Integrated **third-party APIs and webhook pipelines** to automate data flows between product systems and external vendor platforms.
- Built **database models and query optimizations** in PostgreSQL and MongoDB supporting reporting dashboards used by operations teams.
- Participated in **on-call rotation and incident response**, documenting root causes and preventative fixes for recurring production issues.
- Contributed to **Azure-hosted deployments** with scripted release processes and environment configuration management.
- Wrote **technical documentation and developer guides** that standardized implementation patterns across a growing remote team.

## Frontend Developer

Feb/2014 - May/2018

### Duda

Onsite | Louisville, CO

- Built **responsive web interfaces** with JavaScript, HTML5, and CSS3 for a website builder platform used by thousands of SMB customers.
- Implemented **component-based UI architecture** patterns that improved reuse across editor tools and reduced front-end defect rates.
- Collaborated with designers and backend engineers to deliver **pixel-accurate, accessible interfaces** meeting cross-browser compatibility standards.
- Optimized **client-side performance** through bundle splitting, lazy loading, and asset optimization that improved page load metrics.
- Integrated **REST APIs** for dynamic content rendering, form submissions, and real-time preview features within the site editor.
- Participated in **code reviews and sprint planning**, contributing to iterative delivery of customer-facing product enhancements.

## EDUCATION

---

### Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

## SKILLS

---

**Frontend:** React, TypeScript, JavaScript, HTML5, CSS3, Redux, Next.js, responsive UI development

**Backend:** Python, Node.js, REST APIs, GraphQL, microservices, LLM orchestration, prompt engineering

**Databases:** PostgreSQL, MongoDB, Redis, vector databases (Pinecone, pgvector), Elasticsearch

**Cloud & DevOps:** AWS, Azure, Docker, Kubernetes, CI/CD, Terraform, MLOps pipelines, containerization

**Monitoring & Tools:** Datadog, Prometheus, Grafana, Sentry, Git, Postman, Jira

**Workflow & PM:** Agile/Scrum, offshore team coordination, technical documentation, incident management, stakeholder communication

## CERTIFICATIONS

---

- Google Analytics Individual Qualification

## PROJECTS

---

### Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Designed **HIPAA-compliant AI diagnostic workflows** with secure patient data handling, audit logging, and role-based access controls.

- Built **RAG-based clinical knowledge retrieval** using vector embeddings to assist providers with evidence-backed recommendations.
- Implemented **full stack application layers** with Python services, React dashboards, and automated test coverage for regulated release cycles.

#### **Shipment & Logistics Platform (Real-Time Tracking System)**

- Developed **real-time tracking interfaces** and event-driven backend services processing high-volume shipment status updates.
- Integrated **third-party carrier APIs** with resilient retry logic and monitoring for SLA-sensitive logistics operations.
- Built **operational dashboards and alerting** that enabled support teams to triage delivery exceptions and reduce customer inquiry volume.
