

Dyllan Ostenson

Senior Full Stack Software Engineer | AI/ML & Production Systems

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

PROFESSIONAL SUMMARY

Senior full stack engineer with 12+ years building production SaaS platforms across frontend, backend, and cloud infrastructure. Hands-on owner of AI-enabled delivery including LLM integrations, retrieval pipelines, and model evaluation in Python. Technical leader coordinating distributed teams, translating requirements into shippable designs, and resolving incidents through root-cause analysis. Experienced with AWS, Azure, CI/CD, test automation, and regulated-domain systems.

WORK EXPERIENCE

Senior Software Engineer

Aug/2022 - Mar/2026

TechCrunch

Remote | San Francisco, CA

- Owned end-to-end delivery of **LLM-powered content generation features**, integrating retrieval pipelines and API orchestration across editorial workflows serving millions of monthly readers.
- Built and maintained **RAG pipelines with vector search** over proprietary article corpora, improving answer relevance and reducing manual research time for internal tooling teams.
- Developed **Python backend services** and RESTful APIs supporting model inference, prompt templating, and evaluation workflows with automated regression gates in CI/CD.
- Led **production incident response** during US business hours, performing root-cause analysis and shipping corrective fixes that restored SLA-backed editorial publishing flows.
- Coordinated execution across **distributed engineering teams**, translating stakeholder requirements into technical designs, sprint tasks, and measurable delivery milestones.
- Implemented **automated testing suites** spanning unit, integration, and contract tests for AI-enabled services, strengthening release confidence and reducing post-deploy defects.
- Designed **full stack UI integrations** connecting React dashboards to model monitoring, latency metrics, and cost telemetry for platform operators.
- Established **MLOps practices** including model evaluation harnesses, performance tuning for latency and cost, and responsible rollout patterns for generative features.
- Reviewed offshore and partner team deliverables for **security, performance, and compliance**, enforcing code quality standards before production promotion.

Senior Fullstack Engineer

Oct/2020 - Jul/2022

Golden Technology

Remote | Glendale, OH

- Architected **full stack SaaS modules** spanning React frontends and Python/Node backends, supporting enterprise clients with multi-tenant data isolation and role-based access controls.
- Delivered **production-grade APIs** with comprehensive test automation, debugging workflows, and structured logging that accelerated defect resolution across customer environments.
- Led **cross-team technical design reviews**, aligning product, QA, and offshore developers on functional requirements, delivery sequencing, and release readiness criteria.
- Built **CI/CD pipelines on AWS** automating build, test, and deployment stages, cutting manual release steps and improving deployment consistency across services.
- Owned **database schema evolution** and query performance tuning for PostgreSQL workloads, resolving latency spikes affecting high-traffic customer dashboards.
- Mentored **junior engineers** on testing discipline, code review practices, and production support protocols, raising team throughput without compromising quality gates.
- Partnered with stakeholders to translate **business workflows** into actionable engineering backlogs, maintaining transparent status reporting and risk escalation paths.
- Implemented **regression test automation** and monitoring alerts that surfaced production anomalies early, enabling faster triage during business-critical incidents.

Fullstack Developer

IgniteTech

Jun/2018 - Sep/2020

Remote | Austin, TX

- Shipped **full stack features** across React interfaces and Node.js services, supporting rapid product iteration for B2B SaaS customers in distributed remote teams.
- Built **automated test coverage** for API and UI layers, reducing regression defects caught late in release cycles and improving developer feedback loops.
- Diagnosed **production issues** through structured debugging and log analysis, restoring service availability and documenting root causes for prevention.
- Collaborated with product and QA on **functional requirements**, delivering technical documentation and build tooling that aligned offshore contributors on shared standards.
- Integrated **cloud-hosted services on AWS** for staging and production deployments, supporting reliable releases through containerized application packaging.
- Developed **RESTful endpoints** and data access layers with attention to performance tuning, enabling responsive user experiences under concurrent load.

Frontend Developer

Duda

Feb/2014 - May/2018

Onsite | Louisville, CO

- Built **responsive UI components** and page builder experiences used by thousands of agency customers, emphasizing accessibility, performance, and cross-browser consistency.
- Collaborated with backend teams to integrate **REST APIs** into customer-facing dashboards, translating design specifications into maintainable JavaScript application code.
- Implemented **automated UI regression tests** and debugging workflows that caught layout and interaction defects before production releases.
- Contributed to **build tooling improvements** that shortened frontend compile cycles and standardized asset pipelines across engineering squads.
- Participated in **code reviews** and technical writing for component libraries, helping onboard new developers and preserve UI consistency at scale.

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Responsive UI, Component Architecture

Backend: Python, Node.js, REST APIs, GraphQL, Microservices, Prompt Engineering, LLM Orchestration

Databases: PostgreSQL, MongoDB, Redis, Vector Databases, Vector Search, SQL Performance Tuning

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, CI/CD, Terraform, MLOps Pipelines

Monitoring & Tools: Datadog, Prometheus, Grafana, Sentry, Root Cause Analysis, Incident Management

Workflow & PM: Agile/Scrum, Offshore Coordination, Technical Documentation, Jira, Git

CERTIFICATIONS

- Google Analytics Individual Qualification

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Designed HIPAA-aware **AI diagnostic assistance workflows** with audit logging, access controls, and encrypted data handling across clinical user interfaces.
- Built **Python services and RAG retrieval layers** over medical knowledge sources, supporting evaluation gates for accuracy, latency, and responsible deployment.
- Implemented **regression and integration test automation** ensuring compliance-sensitive features remained stable through continuous delivery pipelines.

Shipment & Logistics Platform (Real-Time Tracking System)

- Developed **real-time tracking dashboards** and event-driven backend services processing high-volume shipment updates with sub-second refresh patterns.
- Tuned **database queries and API performance** under peak logistics load, maintaining reliability for operations teams during business-critical windows.
- Established **monitoring and incident playbooks** for production support, enabling rapid triage and root-cause fixes across distributed services.
