

Dyllan Ostenson

Senior Software Engineer | AI/ML & Full Stack

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

PROFESSIONAL SUMMARY

Senior Software Engineer with 12+ years delivering production full stack and AI-enabled applications. Expert in Python, React, and cloud platforms (AWS, Azure), with hands-on ownership of LLM features, RAG pipelines, and vector search at scale. Proven technical leader who bridges stakeholders and offshore teams, resolves production incidents, and ships reliable software through testing, CI/CD, and MLOps.

WORK EXPERIENCE

Senior Software Engineer

Aug/2022 - Mar/2026

TechCrunch

Remote | San Francisco, CA

- Owned end-to-end delivery of **LLM-enabled product features** across Python services and React UI, coordinating **offshore engineers** and platform teams from design through production rollout.
- Built **RAG pipelines** with vector search integration that improved document retrieval precision for editorial workflow tools serving **500K+ monthly readers**.
- Implemented **prompt orchestration** and evaluation workflows to monitor latency, cost, and response quality across **generative AI services** in production.
- Led **incident response** during US business hours, performing root-cause analysis and deploying fixes that reduced recurring production defects by **35%**.
- Developed **Python microservices** and REST APIs powering AI-assisted content discovery, backed by automated regression suites and **CI quality gates**.
- Operated **AWS and Azure-hosted** application infrastructure, tuning performance and cloud spend while maintaining security and reliability standards.
- Translated **business requirements** into technical designs and actionable engineering tasks for distributed delivery teams across **three time zones**.
- Authored **technical documentation** and internal build tools that shortened onboarding time for new engineers by **40%**.
- Mentored **four engineers** on full stack patterns, test automation, and responsible AI practices for production ML features.

Senior Fullstack Engineer

Oct/2020 - Jul/2022

Golden Technology

Remote | Glendale, OH

- Led full stack development of **SaaS platform capabilities** using React, Node.js, and PostgreSQL, supporting enterprise clients with **99.9% uptime**.
- Introduced **automated testing** frameworks spanning API and UI layers, increasing release confidence and reducing post-deploy defects by **30%**.
- Designed **Python and Node backend services** for data-intensive workflows, optimizing query performance across **2M+ daily transactions**.
- Coordinated with **remote and offshore contractors** on feature delivery, reviewing code for security, performance, and compliance readiness.
- Built **CI/CD pipelines** on AWS enabling weekly production releases with rollback automation and deployment monitoring.
- Partnered with product stakeholders to refine **functional requirements** into scalable architecture proposals adopted across **two product squads**.
- Drove **production support** rotation, resolving priority incidents through systematic debugging and long-term corrective actions.
- Implemented **observability tooling** with logging, metrics, and alerting that cut mean time to detection for service outages by **50%**.

Fullstack Developer

Jun/2018 - Sep/2020

IgniteTech

Remote | Austin, TX

- Delivered **full stack features** for a B2B SaaS product using React, Python, and MySQL, supporting **10K+ active users**.
- Built **REST APIs** and integrated third-party services, improving data synchronization reliability across customer workflows by **25%**.
- Created **automated test suites** with Jest and Pytest, establishing regression coverage for critical user journeys.
- Collaborated with **distributed engineering teams** on sprint planning, technical specifications, and cross-functional platform delivery.
- Optimized **frontend performance** and bundle size, reducing page load times by **40%** on high-traffic application views.
- Supported **production deployments** and debugging across staging and live environments with structured incident triage.

Frontend Developer

Feb/2014 - May/2018

Duda

Onsite | Louisville, CO

- Developed **responsive web interfaces** with JavaScript, HTML/CSS, and React for a website builder platform powering **1M+ published sites**.
- Implemented **reusable UI components** and design-system patterns that improved consistency across editor and dashboard experiences.
- Partnered with backend engineers to integrate **API-driven features**, ensuring reliable data flow and error handling in production.
- Wrote **unit and integration tests** for frontend modules, contributing to stable release cycles for customer-facing tools.
- Participated in **code reviews** and iterative refinement of user workflows informed by analytics and customer feedback.

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

SKILLS

Frontend: React, JavaScript/TypeScript, HTML/CSS, Redux, REST API Integration, Responsive UI

Backend: Python, Node.js, REST APIs, Microservices, LLM Integration, RAG Pipelines, Prompt Engineering

Databases: PostgreSQL, MySQL, MongoDB, Vector Databases (Pinecone, pgvector), Redis

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, CI/CD, Terraform, MLOps, GitHub Actions

Monitoring & Tools: Datadog, Prometheus, Grafana, Sentry, Jest, Pytest, Git

Workflow & PM: Agile/Scrum, Jira, Offshore Team Coordination, Technical Writing, Incident Management

CERTIFICATIONS

- Google Analytics Individual Qualification

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Architected a **HIPAA-compliant healthcare platform** with AI-assisted clinical workflows, role-based access controls, and audit logging for regulated data handling.
- Built **Python backend services** and React dashboards integrating LLM-powered summarization with human-in-the-loop review for care team efficiency.
- Deployed on **AWS with CI/CD pipelines**, automated testing, and monitoring that maintained production stability across multi-tenant environments.

Shipment & Logistics Platform (Real-Time Tracking System)

- Developed a **real-time shipment tracking platform** with event-driven updates, geolocation APIs, and operator dashboards for logistics teams.
- Implemented **Node.js and PostgreSQL services** processing high-volume status events with sub-second latency for active shipment queries.
- Added **automated regression testing** and alerting that reduced undetected tracking failures during peak shipping periods by **45%**.
