

Dyllan Ostenson

Senior Software Engineer | Full Stack & AI/ML Applications

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

PROFESSIONAL SUMMARY

Senior software engineer with 12 years delivering production full stack and AI-enabled applications across SaaS, media, and regulated healthcare domains. Owns end-to-end execution for LLM integrations, RAG pipelines, and vector search while building backend APIs, UI workflows, and test automation. Proficient in Python, AWS and Azure operations, CI/CD, and production incident triage. Partners with offshore teams, platform engineers, and business stakeholders to ship reliable, compliant features at scale.

WORK EXPERIENCE

Senior Software Engineer TechCrunch

Aug/2022 - Mar/2026

Remote | San Francisco, CA

- Owned technical delivery for **LLM-powered content discovery** features, integrating **RAG pipelines** and **vector search** to surface relevant articles across a catalog exceeding 2M indexed pages.
- Built and maintained **Python microservices** and **Node.js APIs** supporting editorial workflows, reducing manual curation effort by **35%** through automated tagging and summarization.
- Led **full stack implementation** of AI-assisted publishing tools spanning React dashboards, GraphQL gateways, and event-driven ingestion services used by 40+ internal stakeholders.
- Established **test automation suites** and CI quality gates covering regression, API contracts, and UI flows, cutting release-cycle defects by **28%** over six quarters.
- Served as **US-hours production owner**, triaging incidents, performing **root-cause analysis**, and coordinating offshore fixes that restored SLA compliance within agreed response windows.
- Designed **prompt engineering** and evaluation workflows for generative features, monitoring latency, cost, and output quality with dashboards tied to release readiness criteria.
- Partnered with **offshore delivery teams** and platform engineers to review pull requests, infrastructure changes, and pipeline updates for security, performance, and compliance standards.
- Authored **technical documentation** and internal build tools that standardized local development setup, shortening onboarding time for new engineers by roughly two weeks.
- Optimized **AWS-hosted services** and containerized deployments, tuning autoscaling and cache layers to sustain traffic spikes during major product launches.

Senior Fullstack Engineer Golden Technology

Oct/2020 - Jul/2022

Remote | Glendale, OH

- Architected **HIPAA-aware full stack modules** for a healthcare analytics platform serving clinical operations teams across 12 hospital networks.
- Delivered **Python and TypeScript services** powering patient intake workflows, appointment scheduling, and secure document exchange with role-based access controls.
- Implemented **retrieval workflows** over structured and unstructured medical records, enabling care coordinators to surface relevant history within seconds during live calls.
- Built **React clinician dashboards** and administrative consoles with accessibility-focused UI patterns adopted as team standards for subsequent releases.
- Introduced **automated testing** across unit, integration, and end-to-end layers, raising deployment confidence and reducing post-release hotfixes by **40%** year over year.
- Mentored three engineers on **API design**, database modeling, and code review practices while acting as technical liaison between product owners and implementation squads.
- Debugged production issues involving **third-party EHR integrations**, isolating failure points and deploying corrective changes under tight regulatory audit timelines.
- Migrated legacy monolith components into **modular AWS services**, improving release cadence from monthly to biweekly without increasing operational incidents.

Fullstack Developer

Jun/2018 - Sep/2020

IgniteTech

Remote | Austin, TX

- Developed **full stack features** for enterprise knowledge-management SaaS using React, Express, and PostgreSQL used by 5,000+ licensed users.
- Built **REST APIs** and background jobs for content indexing, search, and permissions, supporting multi-tenant isolation across customer environments.
- Integrated **CI/CD pipelines** with automated regression suites that caught integration failures before production promotion.
- Collaborated with **distributed engineers** across time zones to deliver roadmap items, translating functional requirements into actionable sprint tasks.
- Resolved **production support tickets** involving data sync errors and authentication edge cases, documenting root causes for recurring issue prevention.
- Created reusable **UI component libraries** that accelerated feature delivery and maintained visual consistency across product modules.

Frontend Developer

Feb/2014 - May/2018

Duda

Onsite | Louisville, CO

- Built **responsive web interfaces** for a drag-and-drop website builder platform used by agencies managing thousands of client sites.
- Implemented **JavaScript and CSS enhancements** to the editor experience, improving page-load performance for template previews by **22%**.
- Partnered with backend engineers to integrate **REST endpoints** for billing, publishing, and asset management within customer-facing workflows.
- Participated in **cross-browser regression testing** and bug fixes that stabilized releases across Chrome, Safari, and legacy Internet Explorer targets.
- Contributed to **design-system components** reused across dashboard, analytics, and onboarding surfaces for consistent UX patterns.

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, GraphQL, Responsive UI, Component Libraries

Backend: Python, Node.js, Express, REST APIs, GraphQL, Microservices, Event-Driven Architecture

Databases: PostgreSQL, MongoDB, Redis, Vector Databases, pgvector, Search Indexing

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, CI/CD, Terraform, Container Orchestration, MLOps Pipelines

Monitoring & Tools: Datadog, Prometheus, Grafana, Git, Jest, Cypress, Pytest, LLM Evaluation Tooling

Workflow & PM: Agile/Scrum, Jira, Confluence, Technical Writing, Stakeholder Collaboration, Offshore Team Coordination

CERTIFICATIONS

- Google Analytics Individual Qualification

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Led development of an **AI-driven clinical workflow platform** with HIPAA-compliant data handling, role-based access, and audit logging for regulated healthcare operations.
- Built **RAG-backed retrieval** over patient records and care guidelines, enabling coordinators to obtain context-aware summaries during high-volume intake cycles.

- Integrated **Python inference services** and React portals with encrypted storage layers, supporting monitored release pipelines across AWS environments.

Shipment & Logistics Platform (Real-Time Tracking System)

- Delivered a **real-time tracking system** with live shipment status, geolocation updates, and exception alerting consumed by warehouse and carrier partners.
- Implemented **event-driven microservices** and WebSocket feeds that sustained sub-second update propagation across 50K+ daily tracked parcels.
- Added **automated regression suites** and operational dashboards for incident triage, improving mean time to detect routing failures by **30%**.
