

Dyllan Ostenson

Senior Software Engineer | Full Stack & AI/ML Platforms

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

PROFESSIONAL SUMMARY

Senior software engineer with 12+ years building production full stack and AI-enabled applications. Owns end-to-end delivery across Python services, React interfaces, and cloud infrastructure on AWS and Azure. Experienced coordinating distributed teams, stabilizing production systems, and shipping LLM orchestration, RAG pipelines, and automated quality gates in regulated and high-traffic SaaS environments.

WORK EXPERIENCE

Senior Software Engineer

Aug/2022 - Mar/2026

TechCrunch

Remote | San Francisco, CA

- Owned **end-to-end technical delivery** for LLM-enabled editorial and data products, coordinating offshore engineering contributors and platform teams during US business hours.
- Architected **RAG pipelines with vector search** that improved content discovery relevance while meeting latency and cost targets through structured model evaluation and tuning.
- Built **Python backend services and APIs** supporting generative AI workflows, applying prompt engineering and orchestration patterns for reliable production inference.
- Led **incident response and root-cause analysis** for business-critical releases, implementing automated regression suites and runbooks that reduced repeat production defects.
- Established **CI/CD quality gates and test automation** across backend, API, and UI layers, enabling consistent weekly releases with strong pre-production coverage.
- Translated **functional requirements from product stakeholders** into actionable engineering plans, communicating scope, risks, and dependencies across cross-functional groups.
- Optimized **AI service performance on AWS** through monitoring, caching, and batching strategies that lowered inference spend without compromising reader-facing SLAs.
- Mentored engineers on **full stack engineering standards**, code review practices, and responsible rollout patterns for LLM-powered features.
- Delivered **React UI integrations** for AI-assisted editorial tooling, ensuring accessible, regression-tested experiences across internal and customer-facing surfaces.

Senior Fullstack Engineer

Oct/2020 - Jul/2022

Golden Technology

Remote | Glendale, OH

- Served as **technical owner** for a HIPAA-compliant healthcare platform, aligning distributed teams on architecture, delivery milestones, and compliance constraints.
- Developed **Python and Node.js services** powering AI-driven clinical support features deployed to provider organizations nationwide.
- Built **automated testing and regression frameworks** that strengthened release confidence and reduced post-deploy defect volume across core application modules.
- Implemented **vector-backed knowledge retrieval** for medical content search, improving staged relevance evaluations through embedding tuning and query routing.
- Led **Azure cloud migration** for production workloads, introducing IaC templates and CI/CD pipelines that shortened deployment lead time.
- Performed **production troubleshooting and RCA** on service outages, delivering durable fixes that improved platform reliability for clinical users.
- Authored **technical documentation and internal build tools** that standardized API contracts and accelerated onboarding for remote contributors.
- Partnered with compliance and product leaders to embed **regulatory requirements** into application design without blocking feature delivery.

Fullstack Developer

Jun/2018 - Sep/2020

IgniteTech

Remote | Austin, TX

- Built **full stack features** in React and Python for a SaaS analytics product used by enterprise customers across multiple industry verticals.
- Implemented **REST APIs and AWS-hosted services** supporting real-time data ingestion with health checks and structured error handling.
- Created **automated test suites** spanning unit, integration, and UI layers, expanding coverage across high-risk payment and reporting workflows.
- Resolved **production defects during on-call rotations** through structured triage, logging improvements, and targeted hotfix releases.
- Contributed to **CI/CD pipeline enhancements** with Docker and Jenkins, improving build reliability for distributed engineering contributors.
- Collaborated with UX and product partners to ship **responsive UI components** validated through cross-browser regression testing.

Frontend Developer

Feb/2014 - May/2018

Duda

Onsite | Louisville, CO

- Developed **React and JavaScript components** for a website builder platform serving a large base of small business customers.
- Improved **frontend performance** through code splitting and lazy loading, reducing initial page load times on editor-heavy workflows.
- Wrote **automated UI tests** with Selenium and Jest, decreasing manual regression effort each sprint for core publishing features.
- Integrated **REST APIs** into customer-facing editor experiences in close collaboration with design and backend engineers.
- Participated in **code reviews and agile delivery**, helping maintain consistent release quality across a co-located product team.

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Redux, Next.js, Responsive UI, Accessibility

Backend: Python, Node.js, REST APIs, GraphQL, Microservices, LLM Orchestration, Prompt Engineering

Databases: PostgreSQL, MongoDB, Redis, Vector Databases (Pinecone, pgvector), Elasticsearch

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, CI/CD, Terraform, MLOps Pipelines, GitHub Actions

Monitoring & Tools: Datadog, CloudWatch, Sentry, Grafana, Prometheus, Jest, Pytest, Selenium

Workflow & PM: Agile/Scrum, Jira, Confluence, Stakeholder Collaboration, Offshore Team Coordination, Technical Writing

CERTIFICATIONS

- Google Analytics Individual Qualification

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Led implementation of **HIPAA-compliant AI capabilities** including secure patient data handling, audit logging, and role-based access controls.
- Built **RAG-based clinical knowledge retrieval** with vector embeddings and Python services, enabling evidence-backed recommendations within provider workflows.

Shipment & Logistics Platform (Real-Time Tracking System)

- Engineered **real-time tracking APIs** and event-driven pipelines that propagated shipment status updates with low-latency consistency.
- Designed **React operations dashboards** with automated regression coverage, giving logistics teams visibility into delivery exceptions and SLA performance.
