

Dyllan Ostenson

Senior Software Engineer | AI/ML & Production Platforms

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

PROFESSIONAL SUMMARY

Senior software engineer with 10+ years building production full stack and AI-enabled platforms. Owns end-to-end delivery across backend services, API design, and UI integration with hands-on Python, cloud deployment, and operational stability. Experienced shipping LLM workflows, retrieval pipelines, and regulated healthcare systems while coordinating distributed teams and stakeholder alignment.

WORK EXPERIENCE

Senior Software Engineer

Aug/2022 - Mar/2026

TechCrunch

Remote | San Francisco, CA

- Owned **end-to-end technical execution** for AI-enabled product features spanning Python services, REST APIs, and React UI integrations used daily by **40+ editorial and data teams**
- Architected and shipped **retrieval-augmented generation pipelines** with vector search, prompt orchestration, and evaluation gates that improved content discovery latency by **35%**
- Led **production incident response** during US business hours, performing root-cause analysis and deploying corrective fixes that maintained **99.9% uptime** across core publishing services
- Built **test automation suites** and CI/CD quality gates covering regression, API contracts, and LLM output validation across **12 microservices**
- Reviewed offshore and platform team deliverables for **security, performance, and compliance** before release, reducing post-deploy defects by **28%**
- Implemented **MLOps monitoring** for model latency, cost, and quality drift with dashboards that cut mean time to detection from hours to minutes
- Partnered with product and executive stakeholders to translate **functional requirements** into technical designs and sprint-ready engineering tasks
- Mentored **4 engineers** on full stack patterns, debugging practices, and responsible AI governance standards across generative features

Senior Fullstack Engineer

Oct/2020 - Jul/2022

Golden Technology

Remote | Glendale, OH

- Drove **full stack application development** for enterprise SaaS modules serving **2,000+ active users** with React, Node.js, and PostgreSQL
- Delivered **Python-based data services** and workflow APIs that powered real-time dashboards and third-party integrations across client tenants
- Established **automated testing** frameworks with unit, integration, and E2E coverage that increased release confidence and reduced rollback frequency by **40%**
- Owned **Azure cloud operations** including container deployments, environment configuration, and cost-aware scaling for production workloads
- Performed **performance tuning** and profiling on database queries and service layers, improving p95 API response times by **45%**
- Coordinated with **distributed engineering partners** on code reviews, sprint planning, and cross-timezone handoffs for on-time milestone delivery
- Built internal **developer tooling** and technical documentation that shortened onboarding time for new contributors by **30%**
- Supported **production stability** through on-call rotations, debugging escalations, and long-term corrective actions for recurring failure modes

Fullstack Developer

Jun/2018 - Sep/2020

IgniteTech

Remote | Austin, TX

- Developed **full stack features** across React frontends and Node.js APIs for a multi-tenant SaaS platform used by **500+ business accounts**
- Implemented **RESTful services** and database models in PostgreSQL, enabling configurable workflows and role-based access controls
- Added **regression test coverage** and debugging tooling that reduced customer-reported UI defects in production releases
- Deployed application updates through **CI/CD pipelines** on AWS with staged rollouts and automated smoke validation
- Collaborated with QA and product teams to clarify requirements, estimate work, and ship iterative improvements on two-week cadences
- Refactored legacy components into **reusable UI modules**, improving page load performance and maintainability across the product suite

Frontend Developer

Feb/2014 - May/2018

Duda

Onsite | Louisville, CO

- Built **responsive web interfaces** and CMS tooling in JavaScript and React for a website builder platform supporting **1M+ published sites**
- Partnered with backend engineers to integrate **REST APIs** and optimize client-side rendering for complex drag-and-drop editor workflows
- Implemented **automated UI testing** with Jest and integration checks that caught regressions before production releases
- Improved **accessibility and cross-browser compatibility** across core editor surfaces, reducing support tickets tied to rendering issues
- Contributed to **build tool** and bundler configuration that decreased local and CI build times for the frontend monorepo
- Participated in code reviews and sprint ceremonies, delivering **feature increments** aligned with product roadmap priorities

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

SKILLS

Frontend: React, TypeScript, JavaScript, HTML/CSS, Redux, Responsive UI, Accessibility

Backend: Python, Node.js, REST APIs, Microservices, GraphQL, LLM Orchestration, RAG Pipelines

Databases: PostgreSQL, MongoDB, Redis, Vector Databases, Pinecone, Elasticsearch

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, CI/CD, Terraform, MLOps, GitHub Actions

Monitoring & Tools: Datadog, Prometheus, Grafana, Sentry, pytest, Jest, Cypress, Postman

Workflow & PM: Agile/Scrum, Jira, Stakeholder Communication, Offshore Coordination, Technical Writing

CERTIFICATIONS

- Google Analytics Individual Qualification

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Built **HIPAA-compliant clinical workflow** features with secure data handling, audit logging, and role-based access for provider-facing tools
- Implemented **vector search and LLM orchestration** layers with evaluation harnesses to monitor answer quality, latency, and hallucination rates
- Designed full stack architecture spanning React UI, **Python microservices**, and PostgreSQL with encryption at rest and in transit

Shipment & Logistics Platform (Real-Time Tracking System)

- Developed **real-time tracking** dashboards and notification services processing thousands of shipment events per hour with sub-second updates
- Built Python and Node.js **backend services** integrated with third-party logistics APIs, geolocation data, and automated exception routing
- Established **CI/CD pipelines** on AWS with integration tests and production monitoring that supported reliable releases during peak volume windows
