

Dyllan Ostenson

Senior Software Engineer | AI/ML & Full Stack Platforms

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

PROFESSIONAL SUMMARY

Senior software engineer with 12+ years building production full stack and AI-enabled applications. Owns end-to-end delivery across APIs, UI, and ML pipelines including RAG systems and LLM orchestration. Experienced coordinating distributed teams, resolving production incidents, and shipping reliable features on AWS and Azure. Strong in Python, test automation, and regulated-domain software including HIPAA-compliant platforms.

WORK EXPERIENCE

Senior Software Engineer

Aug/2022 - Mar/2026

TechCrunch

Remote | San Francisco, CA

- Owned **technical execution** for AI-enabled editorial and analytics features, translating stakeholder requirements into **actionable engineering work** across backend services, APIs, and UI integration layers.
- Built and maintained **RAG pipelines** and vector search integrations supporting content discovery, reducing manual research effort across **15+ internal tools** used by editorial and data teams.
- Implemented **LLM orchestration** workflows for automated summarization and classification, applying prompt engineering and evaluation gates that improved output quality while cutting **median latency by 35%**.
- Developed production **Python services** and Node.js APIs powering full stack features serving **2M+ monthly readers**, backed by regression and integration test suites guarding critical release paths.
- Led **incident triage** during US business hours for production-impacting issues, performing root-cause analysis and deploying corrective fixes within defined SLA windows.
- Reviewed deliverables from **distributed engineering partners** for security, performance, and compliance before merge, upholding quality standards across **4 product squads**.
- Maintained **CI/CD pipelines** on AWS for reliable deployments, integrating automated testing and monitoring to support a weekly release cadence with minimal rollback events.
- Built internal **developer tooling** and technical documentation that improved onboarding efficiency and reduced duplicate integration work across engineering teams.
- Tuned model and service performance for quality, latency, and cost, establishing **evaluation dashboards** tracking accuracy, response time, and infrastructure spend.

Senior Fullstack Engineer

Oct/2020 - Jul/2022

Golden Technology

Remote | Glendale, OH

- Served as **technical lead** for full stack SaaS modules, coordinating feature delivery across frontend, backend, and data layers for enterprise client deployments.
- Architected **RESTful APIs** and React dashboards supporting real-time operational workflows, improving client task completion rates by **28%** across core product areas.
- Introduced **automated test suites** covering unit, integration, and regression scenarios, cutting production defects in billing and account flows by **40%**.
- Deployed containerized services on **AWS** with health checks and rollback strategies that improved deployment reliability for customer-facing portals.
- Partnered with **remote and offshore contributors** to review code, clarify requirements, and unblock delivery across multiple time zones.
- Debugged **production incidents** affecting customer-facing portals, documenting root causes and preventive measures in runbooks used by support teams.
- Migrated legacy modules to modern **TypeScript** and Python microservices, reducing maintenance overhead and enabling faster feature iteration.
- Mentored junior engineers on **software design**, testing practices, and code review standards during team expansion from 6 to 14 engineers.

Fullstack Developer

Jun/2018 - Sep/2020

IgniteTech

Remote | Austin, TX

- Delivered **full stack features** across React frontends and Node.js APIs for B2B SaaS products serving mid-market customers.
- Built **automated testing** coverage for critical user journeys, reducing regression bugs reported post-release by **30%**.
- Integrated third-party APIs and webhook pipelines, improving data sync reliability for **500+ active client accounts**.
- Collaborated with product and QA to translate **functional requirements** into scoped technical tasks and sprint-ready deliverables.
- Supported **production troubleshooting** and hotfix deployments, resolving customer-impacting defects within same-day windows.
- Authored technical documentation for service endpoints and deployment workflows, accelerating new developer ramp-up.

Frontend Developer

Feb/2014 - May/2018

Duda

Onsite | Louisville, CO

- Developed **responsive UI components** and client-side features for a website builder platform used by **1M+ SMB sites**.
- Improved page editor performance through **frontend optimization**, reducing render times on complex layouts by **25%**.
- Implemented A/B testing integrations and analytics hooks supporting **data-driven product experiments** across the editor experience.
- Partnered with designers and backend engineers to ship **accessible, cross-browser interfaces** meeting WCAG guidelines.
- Participated in code reviews and **regression testing** cycles, maintaining quality across frequent weekly releases.

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Responsive UI, Component Architecture, Accessibility (WCAG)

Backend: Python, Node.js, REST APIs, Microservices, LLM Orchestration, Prompt Engineering, RAG Pipelines, Webhooks

Databases: PostgreSQL, MongoDB, Redis, Vector Databases, Vector Search, Data Modeling

Cloud & DevOps: AWS, Azure, Docker, CI/CD, MLOps, Infrastructure Automation, Containerized Deployments

Monitoring & Tools: Root Cause Analysis, Incident Management, Automated Testing, Regression Testing, Performance Tuning, Evaluation Dashboards

Workflow & PM: Agile/Scrum, Technical Writing, Offshore Coordination, Stakeholder Communication, Cross-Team Delivery

CERTIFICATIONS

- Google Analytics Individual Qualification

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Designed a **HIPAA-compliant healthcare platform** with AI-driven clinical decision support, enforcing access controls and audit logging across protected health data workflows.
- Built **RAG-based retrieval** over medical knowledge sources with vector search, enabling clinicians to surface relevant guidance while maintaining compliance guardrails.

- Implemented **evaluation and monitoring** for model outputs, tracking accuracy, latency, and failure modes to support responsible deployment in a regulated environment.

Shipment & Logistics Platform (Real-Time Tracking System)

- Developed a **real-time tracking platform** with event-driven updates across shipment lifecycle stages, supporting operations teams and external API consumers.
- Built **Python backend services** and dashboard integrations for route visibility, exception handling, and status notifications across high-volume logistics workflows.
- Established **automated testing and CI/CD gates** for release pipelines, improving deployment confidence for production logistics features.
