

Dyllan Ostenson

Senior Software Engineer | AI/ML & Full Stack

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

PROFESSIONAL SUMMARY

Senior software engineer with 12 years of full stack experience delivering production AI-enabled applications. Owns end-to-end technical execution across Python backends, React frontends, and cloud infrastructure on AWS and Azure. Hands-on with LLM orchestration, RAG pipelines, vector search, and MLOps workflows. Proven production ownership including incident response, root-cause analysis, and offshore team coordination. Background spans HIPAA-regulated healthcare and high-scale SaaS platforms.

WORK EXPERIENCE

Senior Software Engineer TechCrunch

Aug/2022 - Mar/2026

Remote | San Francisco, CA

- Owned end-to-end delivery of **LLM-powered content recommendation APIs** serving 2M+ monthly active users, coordinating offshore engineers and platform teams across sprint cycles.
- Designed and deployed **RAG pipelines with vector search** over editorial archives, reducing irrelevant suggestions by 34% while cutting inference latency by 28%.
- Built **Python microservices on AWS** for model orchestration, evaluation workflows, and prompt versioning with automated regression gates in CI/CD.
- Led **production incident response** during US business hours, performing root-cause analysis and deploying fixes that restored SLA compliance within a 45-minute median resolution.
- Implemented **test automation suites** spanning API contracts, UI integration, and ML output quality checks, increasing release confidence across 12 weekly deployments.
- Authored **technical design documents and runbooks** that aligned distributed teams on architecture decisions, security controls, and deployment procedures.
- Integrated **generative AI features into React frontends** with guarded rollout strategies, A/B evaluation metrics, and responsible-use monitoring dashboards.
- Mentored 3 engineers on **full stack debugging, code review practices, and MLOps tooling**, elevating offshore deliverable quality and review turnaround time.

Senior Fullstack Engineer Golden Technology

Oct/2020 - Jul/2022

Remote | Glendale, OH

- Architected **HIPAA-aligned healthcare APIs** processing 500K+ patient records monthly with encryption, audit logging, and access controls.
- Delivered **full stack features** across React dashboards and Node.js services, reducing clinician workflow steps by 22% through targeted UX iteration.
- Established **CI/CD pipelines on AWS** with containerized deployments, automated testing, and staged rollbacks for zero-downtime releases.
- Partnered with **offshore QA teams** to define regression suites and defect triage workflows, cutting production defects by 31% over four quarters.
- Built **real-time notification services** using WebSockets and Redis, supporting sub-second updates across distributed care coordination workflows.
- Conducted **performance tuning** on database queries and API endpoints, improving p95 response times from 890ms to 240ms under peak load.
- Owned **production support rotation**, diagnosing cross-service failures and implementing corrective actions that reduced repeat incidents by 40%.
- Prototyped **ML-assisted triage suggestions** integrating Python inference endpoints with existing patient intake flows.

Fullstack Developer

Jun/2018 - Sep/2020

IgniteTech

Remote | Austin, TX

- Developed **React and Node.js features** for a B2B SaaS platform used by 200+ enterprise accounts, improving module adoption rates by 18%.
- Built **RESTful APIs with PostgreSQL** persistence, implementing validation layers and integration tests that stabilized third-party connector releases.
- Contributed to **Azure-hosted deployments** via Jenkins pipelines, collaborating with DevOps on environment configuration and release checklists.
- Resolved **production defects** through structured debugging and log analysis, restoring customer-facing workflows within same-day turnaround targets.
- Wrote **internal technical guides** for API patterns and testing standards, helping onboard offshore contractors with consistent coding practices.
- Participated in **cross-functional requirement sessions**, translating business workflows into actionable engineering tasks with clear acceptance criteria.

Frontend Developer

Feb/2014 - May/2018

Duda

Onsite | Louisville, CO

- Built **responsive UI components** for a website builder platform supporting 1M+ published sites, improving editor load performance by 15%.
- Implemented **JavaScript widget frameworks** with modular architecture, enabling third-party plugin integrations across customer storefronts.
- Collaborated with designers on **accessibility and regression testing**, reducing UI defects caught in production by 25%.
- Optimized **frontend build tooling and asset pipelines**, decreasing bundle sizes and accelerating local development feedback loops.
- Supported **bug triage and fixes** across legacy jQuery and emerging React codebases during a major platform modernization initiative.

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Redux, Next.js, Responsive UI

Backend: Python, Node.js, Express, FastAPI, REST APIs, GraphQL, Microservices

Databases: PostgreSQL, Redis, MongoDB, Vector Databases (Pinecone, pgvector), Elasticsearch

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, CI/CD, Jenkins, GitHub Actions, Terraform, MLOps

Monitoring & Tools: Datadog, CloudWatch, Splunk, Prometheus, Grafana, Sentry, Postman

Workflow & PM: Jira, Confluence, Agile/Scrum, Technical Documentation, Offshore Coordination, Incident Management

CERTIFICATIONS

- Google Analytics Individual Qualification

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Led development of **AI-driven clinical decision support** with Python NLP services, vector retrieval, and HIPAA-compliant data handling for 50K+ encounters.
- Designed **RAG architecture** over medical knowledge bases with evaluation harnesses tracking precision, latency, and model drift across release cycles.

Shipment & Logistics Platform (Real-Time Tracking System)

- Built **real-time tracking system** with event-driven microservices, GPS ingestion pipelines, and operator dashboards serving 10K+ daily shipments.
- Implemented **automated test coverage** for routing logic and webhook integrations, supporting reliable releases across AWS multi-region deployment.
