

Dyllan Ostenson

Senior Software Engineer | Full Stack & AI/ML

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

PROFESSIONAL SUMMARY

Senior software engineer with 12 years building production full stack systems and AI-enabled applications. Technical owner for LLM integrations, RAG pipelines, and vector search on AWS and Azure. Strong in Python, incident response, automated testing, and coordinating distributed teams to ship reliable, compliant software at scale.

WORK EXPERIENCE

Senior Software Engineer

Aug/2022 - Mar/2026

TechCrunch

Remote | San Francisco, CA

- Owned **end-to-end delivery** for AI-assisted editorial and reader products, breaking down product goals into technical designs and scoped tasks for teams across three time zones.
- Built **Python RAG services** with vector search backing content discovery, cutting retrieval latency by 35% while improving relevance in offline evaluation runs.
- Implemented **LLM orchestration flows** using structured prompting and task routing for summarization and metadata enrichment consumed by editorial workflows.
- Shipped **full stack features** across React clients and REST/GraphQL APIs, wiring inference endpoints with regression-tested UI fallbacks for model degradation scenarios.
- Added **automated quality gates** in CI/CD covering API contracts, output evaluation, and UI snapshots, reducing release regressions by 40% over six quarters.
- Acted as **US-hours production owner**, triaging high-severity incidents, leading root-cause analysis, and landing fixes that restored service levels within target windows.
- Reviewed offshore submissions for **security, performance, and compliance** across application code, pipeline configs, and infrastructure changes before production rollout.
- Optimized **inference cost and latency** via caching, batching, and routing policies that lowered cloud spend on model workloads by 22% without quality loss.
- Published **technical runbooks and design notes** for ML-backed services, shortening onboarding time and standardizing incident response across platform teams.

Senior Fullstack Engineer

Oct/2020 - Jul/2022

Golden Technology

Remote | Glendale, OH

- Led **full stack delivery** for internal SaaS tooling used by 500+ enterprise users, owning API contracts, schema migrations, and React admin experiences.
- Integrated **legacy and cloud services** through event-driven microservices, shrinking batch job cycle times from hours to under 20 minutes.
- Expanded **automated test coverage** with unit, integration, and E2E suites that supported weekly releases and fewer hotfix cycles.
- Deployed **containerized AWS backends** with health checks and blue-green releases, enabling zero-downtime upgrades for customer-facing modules.
- Translated product goals into **actionable functional specs** with QA partners, reducing requirement churn and rework by roughly 30%.
- Mentored engineers on **debugging and code review practices**, improving merge readiness and lowering review iteration counts across the squad.
- Resolved **production bottlenecks** through profiling, query tuning, and caching that improved p95 API response times by 45%.
- Delivered **audit-ready data features** with role-based access and immutable logging for regulated client workflows.

Fullstack Developer

Jun/2018 - Sep/2020

IgniteTech

Remote | Austin, TX

- Delivered **client-facing web products** with React, Node.js, and PostgreSQL from discovery through production deployment.
- Built **REST APIs and worker jobs** for nightly data sync, processing thousands of records with retries and operational alerts.
- Introduced **automated regression tests** on critical flows and endpoints, limiting defect escape in quarterly releases.
- Worked with remote stakeholders to refine **UI prototypes and acceptance criteria** based on iterative user feedback.
- Configured **CI workflows** with linting, unit tests, and staged deployments to shorten team feedback loops.
- Investigated **customer-reported production issues**, reproduced failures, identified root causes, and shipped fixes within SLA targets.

Frontend Developer

Feb/2014 - May/2018

Duda

Onsite | Louisville, CO

- Built **responsive builder interfaces** for SMB website products, focusing on cross-browser consistency and render performance.
- Contributed **shared React components** to the internal design system, speeding feature work by standardizing common UI patterns.
- Improved **template gallery performance** through code splitting, lazy loading, and asset tuning with measurable Lighthouse gains.
- Integrated **REST APIs** for publishing, analytics views, and embedded third-party widgets alongside backend partners.
- Executed **release regression testing**, logging defects and validating fixes prior to production pushes.
- Tuned **webpack build configs** that reduced local rebuild times for frontend developers across the team.

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

SKILLS

Frontend: React, TypeScript, JavaScript, HTML/CSS, Redux, Next.js, Responsive UI, Component Libraries

Backend: Python, FastAPI, Node.js, Express, REST, GraphQL, Microservices, Background Workers

Databases: PostgreSQL, MongoDB, Redis, Vector Databases (Pinecone, pgvector), SQL Optimization

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, CI/CD, Terraform, MLOps Pipelines, GitHub Actions

Monitoring & Tools: Datadog, Sentry, Prometheus, Grafana, LLM Evaluation Frameworks, Log Analysis

Workflow & PM: Jira, Agile/Scrum, Technical Writing, Offshore Coordination, Incident Management

CERTIFICATIONS

- Google Analytics Individual Qualification

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Designed **HIPAA-compliant architecture** with encrypted data flows, audit trails, and role-based access for clinical documentation features.
- Built **AI-assisted intake workflows** using LLM summarization with human-in-the-loop review, reducing manual chart prep time for care teams.
- Implemented **automated test and evaluation suites** for model outputs and PHI handling paths before each production promotion.

Shipment & Logistics Platform (Real-Time Tracking System)

- Developed **real-time tracking dashboards** with websocket feeds and map visualizations serving high-volume shipment monitoring.

- Built **event-driven backend services** for status propagation and exception alerting across carrier integrations.
- Optimized **query and cache layers** to sustain sub-second updates for active shipment lookups at peak load.
