

Dyllan Ostenson

Senior Software Engineer | Full Stack & AI/ML

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

PROFESSIONAL SUMMARY

Senior full stack engineer with 10+ years delivering production SaaS and AI-enabled applications. Technical owner for APIs, UIs, and ML pipelines—including RAG, LLM orchestration, and vector search—across AWS and Azure. Strong in incident response, offshore team coordination, test automation, and regulated-domain software at platform scale.

WORK EXPERIENCE

Senior Software Engineer

Aug/2022 - Mar/2026

TechCrunch

Remote | San Francisco, CA

- Led end-to-end technical delivery for **AI-powered editorial tools**, translating stakeholder requirements into production features used by **40+ internal teams** across editorial and events workflows.
- Built and maintained **Python-based RAG services** with **vector search** integrations, enabling content teams to query archives and draft materials with **sub-2s median latency** at scale.
- Implemented **LLM orchestration** workflows for summarization, classification, and content generation with **prompt evaluation pipelines** that tracked quality, cost, and regression signals.
- Owned **full stack application layers**—React dashboards, Node/Python APIs, and async job processors—shipping weekly releases through **CI/CD pipelines on AWS**.
- Served as **US-hours production owner**, triaging incidents, performing **root cause analysis**, and coordinating fixes with **distributed engineering partners** during high-traffic event cycles.
- Established **automated testing** and quality gates spanning unit, integration, and regression suites that reduced **production defects** in AI features release-over-release.
- Reviewed offshore deliverables for **security, performance, and compliance**, providing actionable feedback that improved delivery predictability across **3 parallel workstreams**.
- Built internal **developer tooling** and technical documentation that accelerated onboarding and standardized patterns for **ML-enabled feature development**.
- Tuned **model inference performance** and caching strategies, balancing **latency and cost** while maintaining SLA targets during peak conference and breaking-news traffic.

Senior Fullstack Engineer

Oct/2020 - Jul/2022

Golden Technology

Remote | Glendale, OH

- Architected **full stack SaaS modules** for enterprise clients, owning API design, UI integration, and deployment across **12+ customer environments** with zero-downtime release practices.
- Delivered **machine learning integrations** for recommendation and anomaly detection features, connecting Python services to production UIs with robust **monitoring and alerting**.
- Led **cross-team technical design** sessions, aligning product, QA, and remote engineers on functional specs, test plans, and rollout strategy for regulated client data workflows.
- Implemented **AWS infrastructure** patterns including containerized services, automated builds, and environment promotion pipelines supporting **continuous delivery**.
- Drove **production support** during business hours, resolving customer-impacting defects through structured debugging and permanent corrective actions.
- Mentored **3 mid-level engineers** on testing discipline, code review standards, and scalable React/Node patterns adopted across the platform team.
- Built **REST and GraphQL APIs** backed by PostgreSQL and Redis, optimizing query paths that improved **p95 response times** for high-volume reporting screens.
- Introduced **regression automation** for critical user journeys, catching integration issues earlier and shortening validation cycles before production cutovers.

Fullstack Developer

IgniteTech

Jun/2018 - Sep/2020

Remote | Austin, TX

- Developed **full stack features** for a B2B analytics product using React, Node.js, and PostgreSQL, delivering **15+ customer-facing enhancements** across two release trains.
- Built **Python microservices** for data ingestion and batch processing, integrating with third-party APIs and internal ETL workflows with idempotent retry handling.
- Created **automated test suites** covering API contracts and UI flows, improving release confidence for a remotely distributed product team.
- Partnered with **offshore QA engineers** to define acceptance criteria, reproduce defects, and close loops on fixes within sprint boundaries.
- Supported **production deployments** and post-release monitoring, using logging and metrics to isolate failures and implement durable patches.
- Authored **technical documentation** for service boundaries and local development setup, reducing ramp-up time for new contributors.

Frontend Developer

Duda

Feb/2014 - May/2018

Onsite | Louisville, CO

- Built responsive **React and JavaScript interfaces** for a website builder platform used by **millions of end-user sites**, focusing on editor performance and accessibility.
- Implemented reusable **UI component libraries** and styling systems that standardized patterns across product squads and shortened feature delivery cycles.
- Collaborated with designers and backend engineers to integrate **REST APIs**, handling edge cases in dynamic layout and media rendering flows.
- Wrote **unit and integration tests** for critical editor paths, contributing to stable releases during high-frequency shipping cadences.
- Improved **front-end build tooling** and bundling configurations that reduced local build times and simplified developer workflows.
- Participated in **code reviews** and sprint planning, contributing to maintainability standards across a growing frontend organization.

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

SKILLS

Frontend: React, TypeScript, JavaScript, HTML/CSS, Next.js, Redux, Responsive UI, Accessibility

Backend: Python, Node.js, FastAPI, REST/GraphQL APIs, Microservices, Async Processing, LLM Integration

Databases: PostgreSQL, Redis, MongoDB, Vector Databases (Pinecone, pgvector), SQL Optimization

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, CI/CD, Terraform, GitHub Actions, MLOps Pipelines

Monitoring & Tools: Datadog, CloudWatch, Sentry, Prometheus, Grafana, ELK Stack, Feature Flags

Workflow & PM: Agile/Scrum, Jira, Confluence, Cross-Functional Collaboration, Offshore Coordination, Technical Writing

CERTIFICATIONS

- Google Analytics Individual Qualification

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Designed a **HIPAA-compliant healthcare platform** with role-based access, audit logging, and encrypted data handling for clinical and administrative workflows.

- Integrated **AI-assisted documentation** and retrieval features using Python services and vector search to surface relevant patient context with governance controls.
- Built **React clinician dashboards** and REST APIs that supported real-time updates, validation rules, and regression-tested release cycles in a regulated environment.

Shipment & Logistics Platform (Real-Time Tracking System)

- Developed a **real-time shipment tracking platform** with event-driven updates, map visualizations, and status notifications across web and API consumers.
- Implemented **Python backend services** and PostgreSQL schemas optimized for high-volume location events, geospatial queries, and operational reporting.
- Added **monitoring, alerting, and automated tests** for dispatch workflows, improving reliability during peak shipping windows and carrier integration changes.
