

Dyllan Ostenson

Senior Software Engineer — AI/ML & Full Stack Applications

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

PROFESSIONAL SUMMARY

Senior software engineer with 10+ years delivering production full stack and AI-enabled platforms across SaaS, media, and regulated healthcare contexts. Technical owner for LLM integrations, RAG pipelines, and API/UI layers on AWS and Azure. Partners with offshore delivery teams and stakeholders to translate requirements into reliable releases, triage incidents, and sustain quality through automated testing, observability, and CI/CD.

WORK EXPERIENCE

Senior Software Engineer

Aug/2022 - Mar/2026

TechCrunch

Remote | San Francisco, CA

- Owned **end-to-end technical execution** for AI-assisted editorial and reader-experience features, translating product requirements into service designs, UI integrations, and delivery plans across platform and offshore engineering groups.
- Built and maintained **Python and Node.js services** powering content APIs, personalization workflows, and admin tooling used by editorial teams during peak publishing windows.
- Implemented **LLM orchestration and RAG pipelines** with vector search over article archives, improving relevance of in-product recommendations while monitoring latency, cost, and output quality in production.
- Developed **React and TypeScript interfaces** for internal CMS extensions and reader-facing modules, pairing component libraries with contract-tested API clients to reduce regression risk across releases.
- Established **automated testing and CI/CD gates** spanning unit, integration, and smoke suites on AWS, cutting release validation time and catching breaking API changes before deployment.
- Led **US-hours production support** for business-critical publishing flows, performing root-cause analysis on incidents, coordinating hotfixes with distributed teams, and documenting corrective actions.
- Reviewed offshore pull requests for **security, performance, and compliance** standards, providing actionable feedback that improved merge quality and reduced rework on shared platform codebases.
- Authored **technical runbooks and architecture notes** for AI service onboarding, enabling faster developer alignment and smoother handoffs between platform, application, and operations stakeholders.
- Tuned **cloud workloads on AWS and Azure** for reliability and cost awareness, rightsizing containers, refining autoscaling policies, and hardening secrets management for AI-enabled services.

Senior Fullstack Engineer

Oct/2020 - Jul/2022

Golden Technology

Remote | Glendale, OH

- Served as **technical lead** for a multi-tenant SaaS platform, defining service boundaries, API contracts, and release sequencing across frontend, backend, and data layers.
- Delivered **Python and Django REST services** supporting customer onboarding, billing workflows, and role-based administration for enterprise accounts.
- Shipped **React dashboards** with accessible UI patterns and state management that improved task completion rates for operations and customer success teams.
- Designed **PostgreSQL schemas and query paths** for reporting modules, reducing page-load times on high-volume account summaries through indexing and caching strategies.
- Introduced **test automation and regression suites** integrated into Jenkins pipelines, increasing confidence in weekly releases and lowering post-deploy defect volume.
- Partnered with **offshore developers** to break down functional requirements into sprint-ready tasks, unblocking delivery through design reviews and paired debugging sessions.
- Resolved **production incidents** via structured triage, log correlation, and permanent fixes that improved uptime for customer-facing transaction flows.
- Mentored **three mid-level engineers** on code review practices, service design, and observability tooling, raising team throughput without sacrificing maintainability.

Fullstack Developer

Jun/2018 - Sep/2020

IgniteTech

Remote | Austin, TX

- Developed **full stack features** across React frontends and Node.js APIs for B2B software products serving distributed enterprise user bases.
- Integrated **third-party services and webhooks** into core application workflows, hardening retry logic and validation to keep downstream sync reliable under load.
- Built **REST endpoints and data models** in MongoDB and PostgreSQL, supporting customer configuration, usage tracking, and administrative reporting needs.
- Contributed to **CI/CD automation** with Dockerized builds and environment promotion scripts that shortened feedback cycles for the engineering team.
- Performed **debugging and root-cause analysis** on customer-reported defects, shipping targeted fixes and regression tests that reduced repeat tickets.
- Collaborated with **QA and product partners** to clarify acceptance criteria, improve test coverage, and align UI behavior with documented functional requirements.

Frontend Developer

Feb/2014 - May/2018

Duda

Onsite | Louisville, CO

- Built **responsive website builder interfaces** in JavaScript and later React, enabling small-business customers to publish branded sites with drag-and-drop tooling.
- Implemented **component libraries and design tokens** that standardized UI patterns across editor, preview, and account management surfaces.
- Optimized **client-side performance** through bundle splitting, lazy loading, and asset pipelines that improved editor responsiveness on lower-bandwidth connections.
- Partnered with backend engineers to integrate **REST APIs** for template catalogs, media uploads, and publishing workflows with clear error handling in the UI.
- Supported **cross-browser regression testing** and defect triage, reducing customer-facing layout issues across major desktop and mobile browsers.

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Component Libraries, Accessible UI, State Management

Backend: Python, Node.js, Django, REST APIs, Microservices, Webhooks, Service Design

Databases: PostgreSQL, MongoDB, Vector Databases, Redis, Schema Design, Query Optimization

Cloud & DevOps: AWS, Microsoft Azure, Docker, CI/CD, Jenkins, GitHub Actions, Infrastructure as Code, MLOps Pipelines

Monitoring & Tools: Observability, Log Analysis, Incident Management, Root Cause Analysis, Automated Testing, Prompt Engineering, LLM Orchestration

Workflow & PM: Agile Delivery, Technical Writing, Offshore Coordination, Stakeholder Communication, Code Review, Mentorship

CERTIFICATIONS

- Google Analytics Individual Qualification

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Architected a **HIPAA-aligned healthcare platform** with Python services, secure APIs, and React clinician portals supporting patient intake and care coordination workflows.

- Implemented **RAG-backed clinical knowledge search** using vector embeddings and governed prompt templates to assist staff while maintaining auditability and access controls.
- Deployed the system on **AWS with CI/CD and monitoring**, establishing automated test gates, incident runbooks, and data-handling practices suited to regulated environments.

Shipment & Logistics Platform (Real-Time Tracking System)

- Built a **real-time logistics tracking platform** with event-driven backend services, map-based UI views, and webhook integrations for carrier status updates.
- Designed **PostgreSQL and Redis data flows** to support high-frequency location events, exception alerts, and operations dashboards used by dispatch teams.
- Added **automated integration tests and performance tuning** for tracking APIs, improving reliability during peak shipment volumes and reducing mean time to recovery.
