

Dyllan Ostenson

Senior Software Engineer — Full Stack & AI/ML Systems

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

PROFESSIONAL SUMMARY

Senior software engineer with 12 years building production full stack applications and AI-enabled platforms. Owns end-to-end delivery across backend services, APIs, and UI layers using Python, TypeScript, and cloud infrastructure on AWS and Azure. Experienced shipping LLM integrations, RAG pipelines, and vector search into regulated, high-traffic products. Leads cross-functional execution with distributed teams, drives incident resolution, test automation, and CI/CD reliability for scalable SaaS systems.

WORK EXPERIENCE

Senior Software Engineer TechCrunch

Aug/2022 - Mar/2026

Remote | San Francisco, CA

- Owned technical execution for **AI-enabled editorial and publishing workflows**, delivering LLM-backed content tooling used by editorial teams across high-traffic news properties.
- Built and maintained **RAG pipelines with vector search** over proprietary article archives, improving retrieval precision for internal research and production support tools.
- Developed **Python microservices and REST APIs** supporting generative AI features, including prompt orchestration, evaluation gates, and latency/cost monitoring dashboards.
- Led **full stack integration** of model inference endpoints into React-based CMS and admin interfaces, coordinating UI, API, and data contract changes across platform teams.
- Served as **US-hours production owner** for business-critical services—triaging incidents, performing root-cause analysis, and shipping corrective fixes with measurable uptime gains.
- Reviewed offshore deliverables for **security, performance, and regression quality**, establishing code review standards and automated test suites that reduced release defects.
- Implemented **CI/CD and MLOps pipelines** on AWS for model-service deployments, enabling gated releases with smoke tests, canary checks, and rollback automation.
- Partnered with product and compliance stakeholders to translate **functional requirements into technical designs**, documenting architecture decisions and runbooks for on-call rotation.
- Mentored engineers on **test automation, debugging practices, and responsible AI usage**, improving team throughput for multi-squad initiatives.

Senior Fullstack Engineer Golden Technology

Oct/2020 - Jul/2022

Remote | Glendale, OH

- Architected **full stack SaaS features** for enterprise clients, owning backend services, API contracts, and React frontends deployed to production on AWS.
- Delivered **Python-based data processing services** supporting workflow automation, with emphasis on design patterns, unit testing, and maintainable service boundaries.
- Integrated **cloud-native infrastructure** including containerized workloads, environment promotion pipelines, and infrastructure-as-code practices for repeatable releases.
- Established **automated regression testing** across API and UI layers, cutting manual QA cycles and improving release confidence for customer-facing modules.
- Coordinated with **distributed engineering partners** across time zones, clarifying task breakdowns, acceptance criteria, and delivery status for multi-team roadmaps.
- Resolved **production incidents** through structured root-cause analysis, postmortems, and long-term hardening of monitoring alerts and retry policies.
- Optimized **application performance** via query tuning, caching strategies, and API payload reduction, improving response times for core user journeys.
- Produced **technical documentation and internal tooling** that standardized local development setup and accelerated onboarding for new contributors.

Fullstack Developer

Jun/2018 - Sep/2020

IgniteTech

Remote | Austin, TX

- Built **full stack web applications** with React frontends and Node/Python services, shipping features from requirements through deployment and production support.
- Developed **RESTful APIs and integration layers** connecting third-party SaaS products, with contract tests and error-handling patterns for reliable data exchange.
- Implemented **automated test coverage** including unit, integration, and UI regression suites integrated into CI pipelines for faster feedback on pull requests.
- Supported **Azure-hosted workloads** during releases and incidents, debugging service failures and coordinating hotfixes with stakeholders.
- Collaborated with **remote cross-functional teams** to refine technical specs, estimate work, and deliver incremental improvements on schedule.
- Authored **technical write-ups and debugging guides** that reduced repeated support tickets and improved developer self-service.

Frontend Developer

Feb/2014 - May/2018

Duda

Onsite | Louisville, CO

- Developed **responsive customer-facing UI components** for a website builder platform serving thousands of small-business sites with consistent cross-browser behavior.
- Implemented **JavaScript features and widget extensions** within a large frontend codebase, following component patterns and performance budgets for page load.
- Partnered with designers and backend engineers to integrate **API-driven templates and editor workflows**, ensuring functional requirements matched production behavior.
- Contributed to **regression testing and bug fixes** across release cycles, using browser debugging tools to isolate UI defects before customer impact.
- Participated in **code reviews and build tooling improvements** that strengthened frontend quality gates and reduced flaky deploy artifacts.

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

SKILLS

Frontend: React, TypeScript, JavaScript, HTML/CSS, Redux, Responsive UI, Component Architecture

Backend: Python, Node.js, REST APIs, GraphQL, Microservices, LLM Integration, RAG Pipelines, Prompt Orchestration

Databases: PostgreSQL, MySQL, Redis, Vector Databases, Embeddings, SQL Performance Tuning

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, CI/CD, Terraform, MLOps, GitHub Actions

Monitoring & Tools: Datadog, CloudWatch, Prometheus, Grafana, Sentry, Root-Cause Analysis, Incident Response

Workflow & PM: Agile/Scrum, Jira, Cross-team Coordination, Offshore Delivery, Technical Writing, Stakeholder Communication

CERTIFICATIONS

- Google Analytics Individual Qualification

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Designed **HIPAA-compliant AI workflow** for clinical data ingestion, access controls, and audit logging across distributed services.
- Built **RAG-based retrieval** over medical knowledge bases with vector embeddings, evaluation harnesses, and human-in-the-loop review gates.

- Implemented **Python backend services** with automated testing, deployment pipelines, and production monitoring for regulated healthcare workloads.

Shipment & Logistics Platform (Real-Time Tracking System)

- Delivered **real-time tracking UI and event-driven APIs** processing high-volume shipment updates with low-latency dashboards for operations teams.
- Architected **cloud-hosted data pipelines** on AWS with queuing, idempotent workers, and performance tuning for peak logistics traffic.
- Established **integration test automation** and incident playbooks that improved release stability for customer-facing logistics features.
