

Dyllan Ostenson

Senior Full Stack Engineer

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

PROFESSIONAL SUMMARY

Senior Full Stack Engineer with 10+ years building scalable web platforms across Angular, Java, and Spring Boot. Proven in designing RESTful services, containerized AWS deployments, and Jenkins CI/CD pipelines. Experienced integrating secure APIs, automated testing with Selenium and Cucumber, and Agile delivery with cross-functional teams. Combines frontend craft with resilient backend architecture for enterprise SaaS and regulated-domain applications.

WORK EXPERIENCE

Senior Software Engineer

Aug/2022 - Mar/2026

TechCrunch

Remote | San Francisco, CA

- Led modernization of **editorial publishing workflows** by delivering **Angular** modules and **Spring Boot** microservices, reducing page assembly effort across teams serving **millions of monthly readers**.
- Architected a **RESTful API** integration layer connecting advertising, analytics, and subscription systems with **secure coding standards** for token-based authentication and input validation.
- Containerized **12+ backend services** with **Docker** and orchestrated **AWS** deployments through **Jenkins CI/CD** pipelines, enabling multiple daily production releases.
- Drove **responsive and progressive web** enhancements for mobile-first article experiences, improving Core Web Vitals across high-traffic landing pages.
- Established an **automated testing** strategy spanning **Selenium** end-to-end suites, integration tests, and performance benchmarks that caught regressions before staging promotion.
- Partnered with product and editorial stakeholders to translate complex requirements into **modular, scalable** service boundaries adopted by three engineering squads.
- Mentored **four mid-level engineers** on **Agile** delivery practices, secure API design, and cross-team code review standards during a platform consolidation initiative.
- Implemented observability hooks and deployment runbooks within **DevOps** workflows, improving incident response during peak traffic events.

Senior Fullstack Engineer

Oct/2020 - Jul/2022

Golden Technology

Remote | Glendale, OH

- Owned **full stack** delivery for enterprise client portals using **Angular, Java, and Spring Boot**, supporting **HIPAA-aligned** data handling for healthcare-adjacent workloads.
- Designed **RESTful web services** consumed by internal dashboards and partner integrations, standardizing pagination, error contracts, and versioning across **20+ endpoints**.
- Built **Docker**-based local and staging environments mirroring production **AWS** topology, accelerating onboarding for distributed engineers.
- Integrated **CI/CD** pipelines with **Jenkins** and artifact repositories, enabling repeatable builds and audited deployments in regulated delivery cycles.
- Developed **Cucumber** and **Selenium** automated test coverage for critical user journeys, increasing release confidence for biweekly production releases.
- Refactored monolithic **J2EE** components into **modular services**, improving deploy independence and reducing blast radius during maintenance windows.
- Collaborated with QA and business analysts in **Agile** sprints to clarify functional specs and deliver incremental enhancements without disrupting live tenants.
- Applied **secure coding practices** including OWASP-oriented reviews, encryption at rest for sensitive fields, and role-based access controls across admin tooling.

Fullstack Developer

IgniteTech

Jun/2018 - Sep/2020

Remote | Austin, TX

- Delivered **full stack** features for B2B SaaS tooling using **JavaScript**, **HTML5**, and **CSS3**, with **responsive layouts** validated across major browsers and device breakpoints.
- Implemented **REST API** consumers and lightweight middleware services, improving data synchronization between internal CRM views and customer-facing dashboards.
- Participated in **Agile** ceremonies and paired with senior developers to ship incremental releases every two weeks across distributed remote teams.
- Wrote **unit and integration tests** for service layers and UI components, helping stabilize regression suites ahead of quarterly feature launches.
- Contributed **Docker** compose setups for local development, aligning dev environments with staging configuration patterns used in deployment pipelines.
- Communicated technical tradeoffs to non-engineering stakeholders during requirements workshops, clarifying scope for **progressive web** feature rollouts.

Frontend Developer

Duda

Feb/2014 - May/2018

Onsite | Louisville, CO

- Built **Angular**-based site builder components and drag-and-drop interfaces used by **thousands of SMB customers** to launch production websites without engineering support.
- Translated design mockups into **semantic HTML**, **CSS3**, and **JavaScript** implementations with **responsive** breakpoints for tablet and mobile editor previews.
- Improved widget load performance through lazy loading and bundle splitting, reducing editor initialization friction for users on slower connections.
- Partnered with backend teams to integrate **RESTful** content and media APIs, ensuring consistent error handling and optimistic UI updates in the builder.
- Supported **Agile** sprint delivery for customer-facing editor enhancements, participating in code reviews and shared coding standards for frontend modules.

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

SKILLS

Frontend: Angular, JavaScript, TypeScript, HTML5, CSS3, Responsive Design, Progressive Web Apps

Backend: Java, J2EE, Spring Boot, Spring MVC, RESTful Web Services, Node.js

Databases: PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: AWS, Docker, Jenkins, CI/CD, Artifactory, Kubernetes

Monitoring & Tools: Selenium, Cucumber, JUnit, Git, Postman, SonarQube

Workflow & PM: Agile/Scrum, Jira, Confluence, Cross-Functional Collaboration

CERTIFICATIONS

- Google Analytics Individual Qualification

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Architected a **HIPAA-compliant** full stack platform with **Angular** frontends and **Spring Boot** services, enforcing encryption, audit logging, and role-based access for protected health data.
- Integrated **AI-driven** clinical decision support features through **RESTful APIs**, pairing model inference endpoints with human-in-the-loop review workflows for regulated outputs.
- Deployed containerized workloads on **AWS** with **Docker** and **Jenkins** pipelines, maintaining separation between PHI and non-sensitive environments across staging and production.

- Built **Cucumber** and **Selenium** test suites covering authorization paths, data retention rules, and end-to-end patient intake flows before each release.

Shipment & Logistics Platform (Real-Time Tracking System)

- Delivered a **real-time tracking** platform using **Angular** dashboards and **Java** backend services, exposing shipment status through **REST APIs** consumed by operations and partner systems.
- Designed **modular, scalable** event-processing services to ingest GPS and warehouse scan updates, sustaining sub-second refresh rates across high-volume logistics lanes.
- Implemented **Docker** containerization and **CI/CD** automation for multi-region **AWS** deployments, supporting zero-downtime rollouts during peak shipping seasons.
- Established performance and integration testing for carrier webhook ingestion and route optimization modules, validating resilience under concurrent load spikes.
