

Dyllan Ostenson

Senior Lead Full Stack Software Engineer

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

PROFESSIONAL SUMMARY

Senior full stack engineer with 12 years of experience delivering cloud-native SaaS, distributed microservices, and data-driven customer platforms using JavaScript, TypeScript, Java, Python, and SQL. Led technical initiatives, mentored developers, and partnered with product stakeholders to ship reliable AWS solutions at scale. Applies emerging AI tooling to improve engineering velocity without compromising quality, security, or iterative Agile delivery.

WORK EXPERIENCE

Senior Software Engineer

Aug/2022 - Mar/2026

TechCrunch

Remote | San Francisco, CA

- Led design and delivery of **full-stack capabilities** across **12+ distributed microservices** supporting editorial, subscription, and analytics workflows on a high-traffic media platform.
- Architected **AWS-hosted services** with **Docker and Kubernetes** orchestration, enabling consistent deployments and **zero-downtime releases** across production environments.
- Built **TypeScript and JavaScript** client applications and **Node.js and Java APIs** that reduced page load latency by **35%** through caching, bundle optimization, and service boundary refinement.
- Partnered with **product managers and data engineers** to translate business requirements into scalable cloud solutions used by **millions of monthly readers**.
- Established **SQL and NoSQL data models** across PostgreSQL, MongoDB, and Redis supporting real-time content personalization and high-volume event ingestion pipelines.
- Mentored **4 engineers** on service ownership, code review standards, and **Agile delivery practices**, improving team throughput while maintaining production stability.
- Introduced **interactive AI tooling** into development workflows for test generation, documentation, and refactoring, reducing routine implementation effort by an estimated **20%**.
- Owned cross-team **API contracts and integration patterns** between frontend, backend, and third-party services, lowering production defects tied to interface drift.
- Drove **observability improvements** with centralized logging and alerting across microservices, shortening mean time to detection for critical production incidents.

Senior Fullstack Engineer

Oct/2020 - Jul/2022

Golden Technology

Remote | Glendale, OH

- Served as **technical lead** on a remote full-stack squad delivering **healthcare SaaS modules** across React, Node.js, and Java services.
- Decomposed a monolithic application into **microservices** deployed on **AWS with Docker**, improving release independence for **6 product teams**.
- Designed **RESTful APIs** and **Python data services** integrating RDBMS and NoSQL stores for patient scheduling, billing, and reporting workflows.
- Implemented **role-based access controls** and audit logging aligned with healthcare compliance requirements without degrading application performance.
- Mentored **3 junior developers** through pairing, design reviews, and structured feedback, accelerating progression to independent feature ownership.
- Optimized **SQL query performance** and indexing strategies across PostgreSQL, reducing report generation time by **45%** for operational dashboards.
- Collaborated with stakeholders to deliver features in **two-week Agile sprints**, consistently meeting commitments across a **12-month product roadmap**.
- Built **CI/CD pipelines** automating testing and containerized deployments, decreasing manual release effort by **60%**.

Fullstack Developer

Jun/2018 - Sep/2020

IgniteTech

Remote | Austin, TX

- Developed **full-stack features** for a B2B SaaS platform using **JavaScript, TypeScript, React**, and **Node.js** services consumed by **500+ enterprise accounts**.
- Created **responsive HTML and CSS interfaces** aligned with design systems, improving usability scores in customer feedback surveys by **18%**.
- Implemented **REST APIs** backed by **PostgreSQL and MongoDB**, supporting multi-tenant configuration and reporting modules.
- Wrote **Python automation scripts** for data migrations and internal tooling, reducing manual onboarding tasks from days to hours.
- Participated in **Agile ceremonies** and cross-functional planning with product and QA, delivering **20+ production releases** over two years.
- Contributed to **Docker-based development environments** that standardized local and staging setup and reduced environment-related defects.

Frontend Developer

Feb/2014 - May/2018

Duda

Onsite | Louisville, CO

- Built **JavaScript, HTML, and CSS components** for a **website builder platform** used by thousands of small business customers.
- Translated design specifications into **reusable UI modules**, cutting duplicate front-end code across product surfaces by **30%**.
- Improved **client-side performance** through lazy loading and asset optimization, contributing to faster editor load times across supported browsers.
- Collaborated with backend engineers to integrate **REST APIs** for template management, publishing workflows, and third-party widget embedding.
- Supported **A/B testing instrumentation** and analytics hooks enabling product teams to measure feature adoption and conversion impact.
- Participated in code reviews and **Agile sprint delivery**, consistently shipping customer-facing enhancements on schedule.

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

SKILLS

Frontend: JavaScript, TypeScript, HTML, CSS, React, Vue.js, Responsive UI, SPA Architecture

Backend: Node.js, Java, Python, REST APIs, Microservices, Event-Driven Services, API Design

Databases: PostgreSQL, MySQL, MongoDB, Redis, SQL, NoSQL, Data Modeling

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD, Terraform, Container Orchestration, Linux

Monitoring & Tools: Datadog, Grafana, GitHub Actions, Jenkins, Interactive AI Tooling, Git

Workflow & PM: Agile, Scrum, Cross-functional Collaboration, Technical Mentorship, Code Review, Stakeholder Communication

CERTIFICATIONS

- Google Analytics Individual Qualification

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Designed **AI-assisted clinical workflow features** within a HIPAA-compliant architecture spanning React, Node.js, and secure cloud services.

- Implemented **encrypted data handling**, access auditing, and **microservice boundaries** isolating protected health information from general application tiers.

Shipment & Logistics Platform (Real-Time Tracking System)

- Built **real-time tracking interfaces** and **event-driven backend services** processing shipment status updates across a distributed logistics network.
- Optimized **NoSQL and SQL storage patterns** for high-volume location events, supporting sub-second dashboard refreshes for operations teams.
