

Dyllan Ostenson

Senior Full Stack Engineer

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

PROFESSIONAL SUMMARY

Senior full stack engineer with 12 years delivering scalable platform systems across SaaS, media, and enterprise products. Expert in Java and Python services, cloud deployments, and performance engineering for high-traffic workloads. Builds internal tools, dashboards, and automation pipelines for cross-functional teams. Skilled troubleshooter with network protocol knowledge and enterprise application architecture experience. Partners with architecture, platform, and product leaders.

WORK EXPERIENCE

Senior Software Engineer

Aug/2022 - Mar/2026

TechCrunch

Remote | San Francisco, CA

- Led **performance optimization initiative** reducing API latency by 40% across publisher-facing services serving 50M+ monthly requests through profiling, caching strategies, and database query tuning
- Architected and delivered an **internal developer dashboard** consolidating build metrics, deployment status, and incident alerts used daily by 30+ engineers across platform teams
- Owned **Java microservices migration** from monolithic legacy stack, improving deployment frequency and enabling independent scaling of content delivery workloads
- Built **Python automation tooling** for load testing pipelines integrating JMeter and custom scripts, standardizing performance regression checks before production releases
- Partnered with **iOS and mobile web teams** to define API contracts and network protocol requirements for real-time content feeds consumed by cross-platform clients
- Designed **cloud deployment architecture** on AWS with containerized services, blue-green rollouts, and automated rollback safeguards for zero-downtime releases
- Mentored **4 junior engineers** on debugging practices, distributed tracing, and production incident reproduction workflows
- Established **monitoring and alerting framework** using Grafana and custom dashboards tracking SLA adherence and p95/p99 response times
- Collaborated with **architecture and platform design** stakeholders to gather requirements and translate customer experience goals into scalable backend solutions

Senior Fullstack Engineer

Oct/2020 - Jul/2022

Golden Technology

Remote | Glendale, OH

- Led full stack development of an **enterprise SaaS platform** supporting 200+ client organizations with role-based access and multi-tenant data isolation
- Optimized **Java application performance** by refactoring hot-path services and implementing connection pooling, reducing server resource costs by 35%
- Developed **real-time messaging components** enabling event-driven notifications across web and mobile client applications
- Built **operations dashboards** surfacing system health, queue depths, and error rates for customer support and engineering teams
- Implemented a **Python scripting layer** for data migration, batch processing, and automated deployment validation tasks
- Designed a **RESTful API layer** with versioning and rate limiting consumed by React frontends and third-party integrations
- Troubleshooted **production network and protocol issues** spanning load balancers, SSL termination, and WebSocket connections
- Championed **CI/CD pipeline improvements** cutting release cycle time from weekly to daily deployments

Fullstack Developer

Jun/2018 - Sep/2020

IgniteTech

Remote | Austin, TX

- Developed **full stack features** for B2B SaaS product using React, Node.js, and PostgreSQL across customer onboarding and billing modules
- Created **internal admin dashboards** providing sales and support teams visibility into account activity and usage metrics
- Implemented **Python utilities** for log parsing, error aggregation, and automated report generation
- Debugged and resolved **cross-browser compatibility** and API integration issues reported by enterprise clients
- Contributed to **cloud deployment workflows** on AWS including environment configuration and release scripting
- Collaborated with **product and QA teams** to reproduce edge-case failures and deliver targeted fixes

Frontend Developer

Feb/2014 - May/2018

Duda

Onsite | Louisville, CO

- Built **responsive frontend components** for website builder platform used by thousands of small business customers
- Developed **customer-facing dashboards** enabling users to manage site analytics, SEO settings, and content publishing
- Optimized **page load performance** through asset bundling, lazy loading, and CDN integration strategies
- Implemented **JavaScript build tooling** improvements reducing compile times and streamlining local development workflows
- Partnered with **UX and product teams** to translate wireframes into accessible, mobile-friendly interface implementations

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Responsive Design, Mobile Web, Redux

Backend: Java, Python, Node.js, Spring Boot, REST APIs, Microservices, GraphQL

Databases: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch

Cloud & DevOps: AWS, GCP, Docker, Kubernetes, Terraform, CI/CD, Jenkins, GitHub Actions

Monitoring & Tools: JMeter, Gatling, K6, Grafana, Datadog, Splunk, Git, Jira

Workflow & PM: Agile/Scrum, Cross-functional Collaboration, Technical Leadership, Mentorship, Stakeholder Communication

CERTIFICATIONS

- Google Analytics Individual Qualification

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Architected a **HIPAA-compliant full stack platform** with encrypted data storage, audit logging, and role-based access for clinical workflow tools
- Integrated an **AI-driven diagnostics module** processing patient data through Python microservices with human-in-the-loop review gates
- Built a **real-time monitoring dashboard** tracking system uptime, API error rates, and compliance audit events

Shipment & Logistics Platform (Real-Time Tracking System)

- Designed a **real-time tracking system** with WebSocket feeds and map-based dashboards for shipment visibility across distribution network
- Implemented **Java backend services** handling high-volume location updates with geospatial indexing and event streaming

- Developed **Python automation scripts** for route optimization analysis and carrier performance reporting
