

Dyllan Ostenson

Senior Full Stack Engineer

+1 646 543 0546 · dyllanostensondev@gmail.com · <https://github.com/radoicic> · Beloit, Wisconsin, United States

PROFESSIONAL SUMMARY

Senior full stack engineer with 10+ years building scalable, customer-facing web applications across SaaS and enterprise environments. Proficient in Angular, JavaScript, Java/Spring Boot, and RESTful API integrations deployed on AWS with Docker and Jenkins pipelines. Led Agile delivery teams through secure coding standards, automated test coverage, and platform modernization. Strong track record resolving complex production issues and driving continuous improvement.

WORK EXPERIENCE

Senior Software Engineer

Aug/2022 - Mar/2026

TechCrunch

Remote | San Francisco, CA

- Architected and delivered **customer-facing web modules** using **Angular** and **TypeScript**, serving **2M+ monthly active users** with performance targets across CDN-backed global delivery.
- Built **scalable RESTful services** with **Java** and **Spring Boot**, designing modular APIs that integrated **12 internal platforms** and external partner systems with consistent authentication patterns.
- Deployed **containerized microservices** on **AWS** using **Docker**, establishing blue-green release workflows that reduced deployment risk and improved release frequency across production environments.
- Implemented **Jenkins** and **Artifactory**-driven **CI/CD pipelines** with automated unit, integration, and end-to-end test gates, catching regressions before promotion to staging clusters.
- Partnered with product and design stakeholders in **Agile sprint planning** to translate requirements into secure, testable features while mentoring **4 engineers** on code review and service design practices.
- Established **secure coding standards** and input-validation frameworks across the stack, reducing vulnerability findings in security audits and hardening session and token handling.
- Led troubleshooting of **complex cross-service production incidents**, restoring SLA-critical workflows by correlating logs, tracing API failures, and coordinating hotfix releases with on-call rotations.
- Contributed to **platform modernization** initiatives by migrating legacy **AngularJS** components to Angular, improving maintainability and enabling faster feature delivery across shared UI libraries.

Senior Fullstack Engineer

Oct/2020 - Jul/2022

Golden Technology

Remote | Glendale, OH

- Owned full stack delivery of **enterprise web applications** using **Angular**, **JavaScript**, and **Java/Spring**, supporting **50K+ business users** across multi-tenant SaaS workflows.
- Designed **RESTful web services** and integration layers connecting billing, identity, and analytics systems with consistent error contracts and idempotent request handling.
- Containerized application tiers with **Docker** and orchestrated **AWS** deployments, improving environment parity and shortening release cycles for customer-facing feature rollouts.
- Built automated **JUnit**, **Selenium**, and integration test suites covering critical user journeys, raising confidence in monthly release trains and reducing manual QA bottlenecks.
- Collaborated with cross-functional teams in **Agile ceremonies** to refine backlog priorities, estimate complexity, and deliver iterative improvements aligned to customer feedback.
- Refactored monolithic backend modules into **resilient Spring Boot services**, improving fault isolation and enabling independent scaling of high-traffic API endpoints.
- Mentored junior developers on **HTML/CSS responsive patterns**, API design, and production debugging techniques during paired programming and structured code reviews.
- Drove **continuous improvement** in build tooling and dependency management, streamlining artifact promotion through **Jenkins** pipelines and shared library versioning.

Fullstack Developer

Jun/2018 - Sep/2020

IgniteTech

Remote | Austin, TX

- Developed **responsive web applications** with **AngularJS**, **JavaScript**, **HTML**, and **CSS**, delivering reusable UI components adopted across three product lines.
- Implemented **Java** and **Spring** backend endpoints exposing **RESTful APIs** consumed by single-page applications, with pagination and filtering patterns for data-intensive screens.
- Integrated third-party services through secure API adapters, handling **authentication flows** and retry logic for unreliable external dependencies in customer-facing workflows.
- Participated in **sprint planning** and daily standups, delivering features on two-week cadences with peer-reviewed pull requests and required unit test coverage.
- Diagnosed and resolved **JavaScript** and server-side defects in staging and production, documenting root causes and preventive fixes for team knowledge sharing.
- Supported **CI/CD build jobs** and deployment checklists, helping automate smoke tests that validated releases before customer-facing production pushes.

Frontend Developer

Feb/2014 - May/2018

Duda

Onsite | Louisville, CO

- Built **customer-facing website builder interfaces** using **JavaScript**, **HTML**, and **CSS**, enabling non-technical users to publish branded sites through drag-and-drop tooling adopted across the core product.
- Developed **AngularJS directives and services** powering editor widgets, improving render performance for pages containing large media libraries and complex layout configurations.
- Collaborated with designers to implement **responsive layouts** and cross-browser-compatible stylesheets, maintaining visual consistency across desktop and mobile preview modes.
- Wrote client-side validation and **REST API** consumption logic against backend endpoints, reducing form submission errors and improving onboarding completion across new account flows.
- Participated in **Agile code reviews** and QA cycles, fixing UI defects and contributing to shared component documentation used by the broader frontend engineering team.

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information Technology

2018-2013

SKILLS

Frontend: Angular, AngularJS, JavaScript, TypeScript, HTML5, CSS3, Responsive Web Design

Backend: Java, J2EE, Spring Framework, Spring Boot, RESTful APIs, Node.js

Databases: PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: AWS, Docker, Jenkins, Artifactory, CI/CD, Kubernetes

Monitoring & Tools: Selenium, Cucumber, JUnit, Grafana, Git, SonarQube

Workflow & PM: Agile, Scrum, Sprint Planning, Code Review, Continuous Improvement

CERTIFICATIONS

- Google Analytics Individual Qualification

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Led full stack development of a **HIPAA-compliant healthcare platform** using **Angular**, **Spring Boot**, and **RESTful APIs**, enabling secure patient data workflows with role-based access controls.
- Integrated **AI-assisted clinical insights** into provider dashboards while enforcing encryption, audit logging, and secure coding standards across cloud-hosted **AWS** infrastructure.
- Containerized services with **Docker** and automated deployments through **Jenkins** pipelines, supporting reliable releases with unit, integration, and end-to-end test coverage.

Shipment & Logistics Platform (Real-Time Tracking System)

- Built a **real-time shipment tracking platform** with **Angular** frontends and **Java/Spring Boot** services, exposing **REST APIs** consumed by customer and operations portals.
- Designed event-driven tracking updates and resilient integration patterns for carrier systems, improving visibility across **high-volume logistics workflows** with modular service boundaries.
- Deployed containerized workloads on **AWS** with **Docker** and CI/CD automation, incorporating performance and integration tests to validate releases before production rollout.
