PROFESSIONAL SUMMARY

Full stack software engineer with 15+ years building scalable web applications, RESTful APIs, and user-centric features across SaaS, storage, and geospatial domains. Expertise in React, TypeScript, and Node.js with proven delivery of secure backend services, modern frontend architectures, and cloud-deployed systems. Strong collaborator across product, design, and engineering teams with a track record of mentoring engineers and driving API integration ownership.

WORK EXPERIENCE

Software Engineer

Dec, 2018 - Jun, 2021

Thermopylae Sciences + Technology

Onsite | Chantilly, Virginia

- Architected and delivered **React-based geospatial web applications** supporting mission-planning workflows for defense and commercial clients, improving operator efficiency across distributed field teams.
- Built **Node.js REST APIs** integrating mapping engines, authentication middleware, and third-party data feeds, enabling secure real-time access for concurrent users across multiple deployments.
- Led **TypeScript adoption** across frontend modules and shared service contracts, reducing regression defects and establishing typed interfaces between UI components and backend endpoints.
- Designed **containerized deployment workflows** with Docker for staging and production releases, standardizing builds and shortening environment setup across client installations.
- Collaborated with product owners and UX designers to translate **user-centric feature requirements** into iterative releases, delivering quarterly roadmap milestones on schedule.
- Implemented **role-based API authorization** and input validation layers, hardening application security for sensitive geospatial datasets accessed over remote connections.
- Mentored junior engineers on **React hooks, state management patterns**, and API integration practices, accelerating onboarding and improving team code review throughput.
- Optimized **frontend rendering performance** for large map tile datasets, reducing initial load latency and improving responsiveness on lower-bandwidth client networks.
- Partnered with infrastructure teams to deploy services on **AWS cloud environments**, supporting reliable availability during peak concurrent usage periods.

Software engineer

Jul, 2013 - Nov, 2018

SolidFire, Inc.

Onsite | Boulder, Colorado

- Developed **RESTful management APIs** for an enterprise storage SaaS platform, enabling automated provisioning and monitoring across clustered node deployments at scale.
- Built **full stack administrative interfaces** with modern JavaScript frameworks for storage operators, streamlining configuration workflows across multi-tenant customer environments.
- Engineered **Node.js and Python backend services** supporting volume lifecycle operations, replication policies, and snapshot management for high-availability data infrastructure.
- Drove **API contract design** with cross-team architects, establishing versioning standards and backward-compatible endpoints consumed by internal tools and partner integrations.
- Containerized **microservice components with Docker**, improving reproducible builds and simplifying QA validation across release candidate cycles.
- Implemented **automated integration test suites** for API endpoints, catching contract-breaking changes before production rollout and reducing customer-impacting incidents.
- Collaborated with DevOps engineers on **CI/CD pipeline enhancements**, accelerating feature delivery while maintaining storage industry reliability standards.

- Provided **technical mentorship** to engineers adopting service-oriented patterns, contributing to team adoption of structured API documentation and code review norms.

Software Engineer
Spatial Corp

Mar, 2009 - Jun, 2013
Onsite | Broomfield, Colorado

- Delivered **web-based visualization components** for 3D modeling SDK products, enabling browser-accessible geometry inspection tools used by engineering software partners.
- Built **JavaScript integration layers** connecting native C++ modeling engines to frontend interfaces, supporting plugin ecosystems across multiple CAD application platforms.
- Developed **customer-facing API documentation** and sample applications, reducing partner integration effort and accelerating third-party adoption of spatial modeling libraries.
- Improved **frontend module architecture** for complex 3D rendering pipelines, increasing maintainability across a multi-year product release cycle.
- Collaborated with QA and support teams to resolve **cross-browser compatibility issues**, stabilizing web component behavior across enterprise customer deployments.
- Contributed to **agile sprint planning** and feature estimation for modeling toolkit releases, aligning engineering deliverables with commercial product roadmaps.

Application Developer
Verizon Business

Mar, 2006 - Feb, 2007
Remote | New York

- Developed **enterprise web applications** for telecom business operations, supporting internal workflows for service provisioning and customer account management.
- Built **backend service integrations** connecting billing and inventory systems, improving data consistency across operational departments.
- Implemented **form-driven UI modules** with validated data capture patterns, reducing manual entry errors in business application workflows.
- Participated in **code reviews and unit testing** practices, establishing an early-career foundation in software quality and team collaboration.
- Supported **production defect remediation** for business-critical applications, restoring service continuity within defined SLA response windows.

EDUCATION

University of Colorado Colorado Springs
Bachelor of Science, Computer Science

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Redux, Hooks, Webpack, Responsive UI

Backend: Node.js, Nest.js, Express.js, RESTful APIs, Microservices, Python

Databases: PostgreSQL, MongoDB, MySQL, Redis

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD Pipelines, Linux

Monitoring & Tools: Git, Jenkins, Grafana, Postman, Jest, Swagger

Workflow & PM: Agile, Scrum, Jira, Cross-functional Collaboration, Technical Mentorship
