

Jeremiah Sol Larocco

Senior Full Stack Software Engineer

+1 608 360 1459 · Jeremiahlarocco120@gmail.com · <https://www.linkedin.com/in/jeremiah-larocco-456aa89/> · <https://github.com/tst-jlarocco> · Colorado, United States

PROFESSIONAL SUMMARY

Full stack software engineer with 15+ years delivering production web applications, RESTful services, and scalable user experiences across enterprise SaaS platforms. Proficient in React, JavaScript/TypeScript, and Node.js with end-to-end ownership from design through deployment. Skilled in TDD, unit testing, microservices integration, and production incident response. Trusted mentor who partners with architects and cross-functional teams to ship secure, high-quality features.

WORK EXPERIENCE

Software Engineer

Dec, 2018 - Jun, 2021

Thermopylae Sciences + Technology

Onsite | Chantilly, Virginia

- Led full stack delivery of **React and TypeScript** modules integrated with **Node.js REST APIs**, improving workflow reliability for distributed geospatial operations teams serving enterprise clients.
- Architected **micro-frontend boundaries** within a modular SPA, enabling independent squad releases while preserving consistent UX across **15+ application views**.
- Drove **test-driven development** with Jest and mocking frameworks, raising unit test coverage on critical paths and reducing regression defects in production releases.
- Partnered with product owners and lead architects to translate business requirements into **scalable, security-conscious designs** aligned with enterprise compliance and quality standards.
- Mentored **junior developers** on React component patterns, API contract design, and systematic debugging during code reviews and pairing sessions.
- Owned **on-call rotation** for mission-critical web services, diagnosing outages and restoring availability for high-volume user traffic using documented runbooks.
- Built and optimized **SQL-backed reporting endpoints** and cached read models, improving dashboard response times for operations and program stakeholders.
- Implemented **CI/CD automation** with linting and test gates in Git workflows, shortening release validation cycles for cross-functional delivery teams.

Software engineer

Jul, 2013 - Nov, 2018

SolidFire, Inc.

Onsite | Boulder, Colorado

- Developed **Node.js microservices** and admin UI components supporting storage cluster management for **enterprise SaaS customers** in a 24/7 production environment.
- Designed **RESTful API** extensions consumed by internal portals and partner integrations, enabling automated provisioning workflows across distributed data centers.
- Extended **React-based management consoles** with TypeScript modules for configuration, monitoring, and capacity planning used by global support teams.
- Applied **TDD and unit testing** with mocking frameworks to validate failure-handling logic in orchestration services before each production deployment.
- Collaborated with architects on **high-availability designs** addressing concurrent node failures and sustained I/O load across multi-node storage clusters.
- Supported **complex integration projects** connecting billing, telemetry, and licensing subsystems through event-driven message flows and idempotent handlers.
- Participated in **on-call rotation** for mission-critical storage platforms, performing root-cause analysis and shipping hotfixes under strict change-control windows.
- Mentored developers on **code review standards**, shared component libraries, and API versioning strategies adopted across multiple product squads.

- Improved deployment automation through **Docker-based build pipelines** and Git-driven release workflows, reducing manual steps in weekly production pushes.

Software Engineer

Mar, 2009 - Jun, 2013

Spatial Corp

Onsite | Broomfield, Colorado

- Built **web-facing tooling and internal portals** using JavaScript and React patterns to expose 3D modeling workflows for engineering customers worldwide.
- Implemented **RESTful services** bridging desktop CAD extensions and centralized authentication, enabling license validation and feature entitlements at scale.
- Owned feature delivery from requirements through deployment for modules supporting **high-volume geometry processing** pipelines used by OEM partners.
- Wrote **unit and integration tests** with mocking frameworks to guard regression in geometry kernel interfaces consumed by downstream application teams.
- Refactored legacy UI layers toward **modular component architectures**, improving maintainability as the product suite expanded across multiple vertical markets.
- Partnered with QA and support to **resolve production defects** quickly, documenting reproduction steps and permanent fixes for customer-impacting issues.
- Contributed to **SQL schema updates** and query tuning for customer metadata, session, and audit tables supporting global user bases.
- Collaborated in **Agile Scrum** ceremonies, providing accurate estimates and communicating schedule risks to product and program stakeholders.

Application Developer

Mar, 2006 - Feb, 2007

Verizon Business

Remote | New York

- Developed **Java and web application** features for business customer portals under senior developer guidance, following documented system requirements.
- Assisted with **debugging and bug fixes** reported by QA and support, learning production triage workflows in a large telecommunications environment.
- Wrote **unit tests** for assigned modules using team-standard frameworks and participated in peer code reviews.
- Used **Git source control** in a collaborative team environment with branching strategies aligned to scheduled release trains.
- Supported **SQL queries** and data corrections for customer account workflows during routine application maintenance windows.

EDUCATION

University of Colorado Colorado Springs

Bachelor of Science, Computer Science

SKILLS

Frontend: React, JavaScript, TypeScript, HTML5, CSS3, Micro-frontends, Component-driven UI, Responsive design, Cypress, TestCafe

Backend: Node.js, RESTful APIs, Microservices, Express.js, NPM, Event-driven integration, API design

Databases: SQL, PostgreSQL, MySQL, NoSQL, Document stores, Query optimization, Schema design

Cloud & DevOps: AWS (S3, SQS, Lambda, ECS, CloudFront, API Gateway, DynamoDB, CloudFormation), Docker, CI/CD pipelines

Monitoring & Tools: Git, Jest, Mocking frameworks, OpenSearch, Application performance monitoring, Automated testing

Workflow & PM: Agile, Scrum, Kanban, JIRA, Confluence, MS Teams, On-call operations, Technical estimation
