PROFESSIONAL SUMMARY

Software engineer with 8+ years building scalable web platforms and customer-facing systems across fintech and enterprise environments. Experienced delivering Python and JavaScript services, GraphQL and REST APIs, and auth flows on GCP with Terraform and Kubernetes. Known for shipping reliable onboarding experiences, driving cross-team architecture, and mentoring engineers while partnering with product and stakeholders.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led design and delivery of **Python microservices** powering client onboarding flows, reducing time-to-first-value for new accounts through automated provisioning and verification pipelines
- Built **GraphQL gateway** resolvers and REST endpoints consumed by React dashboards, unifying access patterns across 12 internal services while maintaining backward-compatible API contracts
- Implemented **Auth0-based authentication and RBAC** across customer portals, integrating SSO, MFA, and scoped permissions aligned with compliance requirements for financial data access
- Provisioned **GCP infrastructure with Terraform**, containerizing services with Docker and deploying to **Kubernetes** clusters with blue-green release strategies that kept deployment-related incidents minimal across quarterly releases
- Partnered with product, design, and support teams to revamp **end-to-end customer onboarding**, translating feedback from stakeholder interviews into prioritized feature roadmaps and measurable UX improvements
- Established **testing and CI/CD standards** including integration suites and contract tests for GraphQL schemas, improving release confidence and enabling safe weekly production deployments
- Mentored **two junior engineers** on API design, distributed systems debugging, and code review practices, accelerating their ramp-up and expanding team delivery capacity
- Diagnosed and resolved **production incidents** across distributed tracing and logging pipelines, identifying root causes in cross-service dependencies and driving durable fixes that reduced repeat outages

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **Java and Python services** supporting trade lifecycle workflows, processing high-volume transactions with resilient error handling and idempotent message processing patterns
- Designed **RESTful APIs** for internal risk and reporting tools, enabling downstream teams to consume standardized data feeds with consistent pagination and schema versioning
- Contributed to **distributed system migrations** from monolithic batch jobs to event-driven microservices on AWS, improving throughput for end-of-day reconciliation pipelines
- Implemented **authentication middleware** and session management for internal analyst applications, aligning access controls with bank security policies and audit requirements
- Wrote **technical documentation** and runbooks for deployment procedures and API usage, reducing onboarding time for new team members and cross-department consumers
- Collaborated with **cross-functional stakeholders** in compliance, operations, and front-office teams to gather requirements and deliver features within regulatory deadlines
- Optimized **SQL queries and data structures** for portfolio analytics dashboards, cutting report generation latency and improving analyst responsiveness during market hours

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **React front-end components** for inventory management features, integrating with REST APIs and improving page load performance through lazy loading and memoization
- Developed **Node.js backend endpoints** supporting mobile and web clients, implementing validation, pagination, and structured error responses for consistent client behavior
- Participated in **Agile sprint ceremonies** and code reviews, delivering assigned stories on schedule while incorporating feedback from senior engineers
- Automated **unit and integration tests** for critical checkout flows, increasing coverage on payment-related modules and catching regressions before release
- Assisted with **database schema updates** in PostgreSQL, writing migrations and seed scripts that supported new product catalog requirements
- Documented **API changes and deployment steps** for team knowledge sharing, helping maintain continuity across intern handoffs

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive web pages** using HTML, CSS, and JavaScript for nonprofit fundraising campaigns, ensuring accessibility and cross-browser compatibility
- Integrated **third-party donation APIs** into the site backend, enabling secure payment processing and real-time confirmation callbacks
- Deployed site updates to **shared hosting environments**, coordinating release timing with marketing stakeholders for campaign launches
- Fixed **front-end defects** reported during QA, resolving layout and form validation issues ahead of public-facing deadlines
- Collaborated with **design volunteers** to implement wireframes and iterate on user feedback during a fast-paced two-month engagement

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: JavaScript, TypeScript, React, Next.js, HTML5, CSS3

Backend: Python, Go, Node.js, Java, GraphQL, REST APIs

Databases: PostgreSQL, MySQL, Redis, MongoDB

Cloud & DevOps: GCP, AWS, Terraform, Kubernetes, Docker, CI/CD

Monitoring & Tools: Auth0, Datadog, Git, Grafana, Postman

Workflow & PM: Agile/Scrum, Technical Documentation, Cross-functional Collaboration
