

Ryan Cho

Senior Software Engineer | Engineering Leader

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Engineering leader with 8+ years building scalable distributed systems across finance and enterprise SaaS. Hands-on architect specializing in Java, C#/.NET, and cloud-native microservices who mentors engineers, drives cross-functional delivery with product partners, and modernizes legacy platforms into high-availability workflow systems. Proven track record improving system performance, operational reliability, and customer-facing capabilities at scale.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected a **microservices-based workflow orchestration platform** supporting 40+ internal teams, replacing monolithic batch processes with event-driven services that improved end-to-end processing throughput by **35%**.
- Led technical design for a **SaaS modernization initiative** migrating legacy desktop tooling to a cloud-hosted web application used by **500+ operations staff** across three business units.
- **Mentored a team of six engineers** through structured code reviews, design sessions, and pairing programs, accelerating ramp-up for new hires and elevating delivery quality across two product pods.
- Partnered with **product managers and business stakeholders** to define roadmap priorities for customer-facing scheduling and order coordination features, delivering quarterly releases aligned to revenue-critical workflows.
- Designed and implemented **RESTful APIs in Java and C#/.NET** powering cross-system data exchange, reducing integration defects by 45% through contract-first development and automated regression suites.
- Drove adoption of **enterprise data platform** patterns including centralized logging, audit trails, and schema governance, cutting query latency on high-volume reporting workloads by **50%**.
- Resolved **complex production incidents** as hands-on escalation lead, establishing runbooks and on-call practices that reduced mean time to recovery for P1 outages from hours to under 45 minutes.
- Championed **CI/CD pipeline modernization** with Docker and Kubernetes deployments on AWS, enabling daily releases with zero-downtime rollout strategies for core platform services.
- Influenced **cross-team architecture standards** for authentication, API versioning, and service mesh communication adopted by four engineering groups organization-wide.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Built **scalable distributed services in Java** supporting trade lifecycle and operational workflows processing millions of transactions daily across global banking infrastructure.
- Contributed to **microservices decomposition** of legacy mainframe-adjacent systems, delivering incremental migration phases under agile two-week sprint cadences with measurable downtime reduction.
- Collaborated with **product owners and compliance teams** to ship customer-facing web capabilities meeting strict regulatory and audit requirements in financial services environments.
- Developed **REST and messaging-based integrations** connecting internal platforms with third-party vendor systems, improving data synchronization reliability for critical settlement workflows.
- Participated in **architecture review boards** presenting design proposals for high-availability backend services with failover and circuit-breaker resilience patterns.
- Automated **regression and performance testing pipelines** that caught production regressions pre-release, reducing post-deployment defect volume by 30% across the technology analyst cohort.
- **Mentored summer analyst cohorts** on Java backend development, code quality standards, and agile delivery practices during structured internship rotations.

- Optimized **SQL Server and PostgreSQL queries** for reporting and reconciliation dashboards, delivering 40% faster batch completion on end-of-day processing jobs.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Developed **full-stack web features** using JavaScript and React for inventory tracking workflows, improving data entry accuracy for warehouse operations teams.
- Implemented **backend API endpoints** in Node.js connecting mobile scanner clients to central inventory databases with validated request handling and error recovery.
- Collaborated with senior engineers in **agile standups and sprint planning**, contributing production-ready pull requests reviewed under team quality gates.
- Enhanced **unit test coverage** for core service modules, helping reduce recurring defects in shipment status updates by strengthening edge-case validation.
- Documented **API contracts and deployment steps** enabling smoother knowledge transfer during team onboarding and release handoffs.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built **responsive web pages** with HTML, CSS, and JavaScript for nonprofit fundraising campaigns, supporting mobile-first access for donor engagement.
- Integrated **third-party payment widgets** into the organization's public website, enabling secure online contribution flows with minimal custom backend overhead.
- Maintained **content management workflows** updating site sections and event listings on scheduled release cycles coordinated with marketing stakeholders.
- Applied **accessibility best practices** improving keyboard navigation and screen-reader compatibility across primary landing pages.
- Collaborated remotely with foundation leadership to translate campaign requirements into **lightweight, maintainable front-end implementations**.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Angular, Responsive Web Design

Backend: Java, Spring Boot, C#, .NET Core, Node.js, REST APIs, Microservices, Event-Driven Architecture

Databases: PostgreSQL, SQL Server, MongoDB, Redis, Query Optimization, Schema Design

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, Terraform, CI/CD, GitHub Actions, Jenkins

Monitoring & Tools: Datadog, Splunk, Grafana, Prometheus, Git, SonarQube, Postman

Workflow & PM: Agile/Scrum, Jira, Confluence, Cross-Functional Stakeholder Management, Technical Mentorship, Roadmap Planning
