

Ryan Cho

Senior Full-Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full-stack software engineer with 7+ years delivering scalable APIs, data pipelines, and React applications across financial services and SaaS. Proven experience productionizing LLM workflows, RAG systems, and agent tooling with Python (FastAPI), Node.js, and TypeScript. Partners effectively with research and product teams to ship reliable, observable platforms that surface real-time insights in high-velocity environments.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led design and delivery of a **full-stack portfolio analytics platform** used daily by investment and operations teams to monitor holdings, performance, and exposure across active strategies.
- Built **FastAPI and Node.js microservices** with async job queues to ingest market and reference data, exposing stable REST APIs for downstream reporting and workflow consumers.
- Shipped **React and TypeScript dashboards** with interactive charts, drill-down views, and export flows that replaced manual spreadsheet reporting for analyst review cycles.
- Productionized **LLM-assisted research workflows** using LangChain and structured prompts to extract entities and summaries from filings, cutting repetitive document review for research staff.
- Implemented **semantic search and RAG pipelines** over internal research libraries with vector embeddings and reranking, improving relevance for analyst knowledge retrieval tools.
- Orchestrated **financial data integrations** from vendor APIs and scheduled file feeds into normalized stores with validation rules, lineage metadata, and idempotent refresh jobs.
- Established **testing, monitoring, and performance** practices including integration test suites, APM tracing, and latency targets for customer-facing API endpoints.
- Partnered with **research and product leadership** to scope agent-style features from prototype to production, defining API contracts, UX flows, and staged rollout criteria.
- Mentored **two junior engineers** on full-stack patterns, code review standards, and safe deployment practices within a remote-first agile squad.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **Java and Python backend services** supporting trade lifecycle, risk reporting, and regulatory data workflows across global banking platforms.
- Built **React internal tools** for operations teams to monitor batch jobs, reconcile transactions, and surface exceptions with near real-time status views.
- Designed **relational database schemas** in PostgreSQL and Oracle for high-volume transactional data, tuning query paths used by daily reporting pipelines.
- Integrated **external financial data feeds** and vendor APIs into centralized stores with validation layers, audit trails, and retry-safe ingestion jobs.
- Collaborated with **quants and business analysts** to translate requirements into API contracts, automated reconciliation flows, and exception handling rules.
- Implemented **CI/CD pipelines** with Jenkins and GitHub Actions plus automated test coverage, reducing deployment risk for mission-critical banking applications.
- Supported **on-call incident response** by improving structured logging, alerting, and runbooks for production services used by front-office and operations teams.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Contributed to **Node.js and React features** for a SaaS platform managing restaurant compliance workflows, digital checklists, and location-level reporting.
- Implemented **REST API endpoints** and database migrations supporting authentication, role-based access control, and audit-friendly activity logging.
- Wrote **unit and integration tests** that increased release confidence and enabled safer iterative shipping on a two-week sprint cadence.
- Participated in **code reviews and agile ceremonies**, delivering incremental UI and backend improvements tied to customer onboarding milestones.
- Refactored **frontend components** for accessibility and responsive layouts, improving usability across mobile and desktop client sessions.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built **responsive public web pages** and CMS-driven content for a nonprofit foundation using HTML, CSS, and JavaScript.
- Configured **hosting and deployment workflows** that allowed non-technical stakeholders to publish site updates without engineering support.
- Optimized **page load performance** through asset minification, lazy loading, and cross-browser compatibility testing.
- Coordinated with **design stakeholders** to implement branding, layout specifications, and accessible navigation across the site.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Redux, Next.js, D3.js, WebSockets, responsive UI

Backend: Python, FastAPI, Node.js, Express, Java, REST APIs, GraphQL, async programming, microservices

Databases: PostgreSQL, MongoDB, Redis, Oracle, Pinecone, pgvector, relational and document modeling

Cloud & DevOps: AWS, Docker, Kubernetes, Terraform, CI/CD, GitHub Actions, Jenkins, containerized deployments

Monitoring & Tools: Datadog, Prometheus, Grafana, pytest, Jest, LangChain, OpenAI API, MCP, prompt engineering

Workflow & PM: Agile/Scrum, Jira, Confluence, Git, code review, cross-functional collaboration, stakeholder alignment
