PROFESSIONAL SUMMARY

Full stack software engineer with 7+ years building scalable backend services, APIs, and data layers across fintech and enterprise platforms. Deep expertise in Node.js, TypeScript, PostgreSQL, and React, with proven ownership of end-to-end feature delivery in fast-paced environments. Architected observable, cloud-native systems on AWS with robust CI/CD pipelines. Actively integrates AI-assisted development workflows and automation to accelerate delivery, improve quality, and raise team engineering velocity.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led architecture and delivery of **core platform APIs** in Node.js and TypeScript, supporting portfolio analytics, trade workflows, and reporting features used across 40+ internal stakeholders.
- Designed and optimized **PostgreSQL data models** and query plans for high-volume financial transactions, reducing p95 API latency by 35% through indexing, connection pooling, and read-replica routing.
- Built **RESTful and event-driven services** with clear service boundaries, versioning, and authentication middleware, enabling modular evolution of a greenfield codebase without disrupting production users.
- Partnered with product, design, and data teams to ship **end-to-end features** spanning React dashboards and backend services, improving user task completion rates across key portfolio workflows.
- Established **CI/CD pipelines** with automated testing, containerized deployments, and infrastructure-as-code on AWS, cutting release cycles from weekly to daily while maintaining rollback safety.
- Integrated **AI-assisted coding tools** and agent workflows into day-to-day development—accelerating PR throughput, standardizing test generation, and improving code review quality across the team.
- Implemented **observable service infrastructure** with structured logging, distributed tracing, and alerting dashboards, reducing mean time to detection for production incidents by 50%.
- Drove **developer tooling improvements** including shared TypeScript libraries, API client SDKs, and local dev environments that reduced onboarding time for new engineers from two weeks to under five days.
- Contributed across the stack on **React applications** with focus on performance, accessibility, and consistent UX patterns for complex financial data visualizations.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **internal trading and risk APIs** in Node.js and TypeScript, exposing normalized market data and analytics endpoints consumed by front-office and operations teams.
- Modeled and maintained **PostgreSQL schemas** for positions, instruments, and audit trails, enforcing data integrity constraints and migration strategies across multiple release trains.
- Collaborated cross-functionally with product, compliance, and data engineering to deliver **regulatory reporting features** end-to-end, from API contracts through React-based review interfaces.
- Built **secure authentication and authorization layers** integrating enterprise SSO, role-based access controls, and API gateway policies for sensitive financial data.
- Designed **scalable batch and streaming pipelines** for market data ingestion, improving data freshness SLA from 15 minutes to under 3 minutes for critical feeds.
- Implemented **cloud infrastructure automation** on AWS using containerized services and CI/CD workflows, standardizing deployments across development, staging, and production environments.
- Introduced **monitoring and alerting frameworks** with centralized logging and health-check endpoints, enabling proactive detection of service degradation before user impact.

- Mentored summer and incoming analysts on **API design patterns**, code review practices, and test-driven development, raising team delivery consistency across rotational cohorts.
- Experimented with early **developer automation** tooling to streamline repetitive boilerplate generation and test scaffolding, improving sprint velocity for the technology group.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **full stack features** for a restaurant technology platform using React and Node.js, supporting menu management and operational dashboards during a year-long internship.
- Developed **REST APIs** with TypeScript for order tracking and inventory sync, integrating third-party POS data with reliable error handling and retry logic.
- Implemented **PostgreSQL-backed services** with normalized schemas for menu items, modifiers, and location-specific pricing across multiple restaurant clients.
- Collaborated with product and design to iterate on **user-facing workflows**, shipping weekly releases in a remote-first startup environment.
- Wrote **unit and integration tests** for critical API paths, improving deployment confidence and reducing regression incidents during rapid feature iteration.
- Contributed to **CI pipeline** setup with automated linting, type checking, and staged deployments, shortening feedback loops for the engineering team.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive web applications** for foundation initiatives using modern JavaScript, HTML5, and CSS3, delivering accessible pages for nonprofit program visibility.
- Built **client-side integrations** with third-party APIs for event registration and content management, improving content update turnaround for non-technical staff.
- Optimized **page performance** through asset bundling, lazy loading, and caching strategies, reducing load times on mobile devices across primary user journeys.
- Collaborated with stakeholders to translate **design requirements** into reusable UI components, maintaining consistent branding across multiple campaign sites.
- Participated in **code reviews** and sprint planning, gaining early exposure to agile delivery practices in a remote development workflow.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript (ES6+), HTML5, CSS3, Redux, Webpack, Responsive Design, Accessibility

Backend: Node.js, TypeScript, Express, REST APIs, GraphQL, Event-Driven Architecture, Microservices, API Design, Authentication & Authorization

Databases: PostgreSQL, SQL, Data Modeling, Query Optimization, Indexing, Migrations, Redis

Cloud & DevOps: AWS (ECS, Lambda, S3, RDS, CloudWatch), Docker, Kubernetes, Terraform, CI/CD (GitHub Actions, Jenkins), Serverless

Monitoring & Tools: Datadog, Prometheus, Grafana, Structured Logging, Distributed Tracing, Jest, Cypress, ESLint, Prettier

Workflow & PM: Agile/Scrum, Cross-Functional Collaboration, Technical Leadership, Code Review, AI-Assisted Development, Git, Jira, Confluence
