

Ryan Cho

Senior Full Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full stack software engineer with 6+ years building production web applications across finance and enterprise SaaS. Owns features end-to-end across React SPAs, backend services, and AWS infrastructure while prioritizing performance, accessibility, and reliability. Applies AI-assisted development to accelerate delivery without compromising code quality. Mentors engineers, partners with product and design, and drives architectural improvements across distributed agile teams.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led **end-to-end delivery** of React portfolio dashboards for investment teams, replacing manual reporting workflows and surfacing **real-time position data** across multiple asset classes.
- Designed **Java microservices** with REST/JSON APIs consumed by React clients, establishing interface contracts and versioning patterns adopted by **three engineering squads**.
- Improved **full stack performance** through query caching, route-based code splitting, and lazy loading, reducing initial page load times by **40%** and strengthening Core Web Vitals on primary flows.
- Championed **accessibility and usability** (WCAG 2.1) across SPA components, partnering with design to simplify analyst workflows and raise task completion across key user journeys.
- Integrated **AI-assisted development** into daily workflows for code generation, refactoring, and test scaffolding while enforcing peer review standards that kept production changes safe and maintainable.
- Deployed **containerized services on AWS (ECS, Lambda, RDS)** with Docker-based CI/CD pipelines, enabling **multiple daily releases** with automated health checks and rollback safeguards.
- Mentored **four engineers** on React architecture, state management, and testing practices, improving squad delivery consistency and reducing recurring production defects.
- Implemented **Datadog observability** across frontend and backend services, building dashboards and alerts that shortened incident triage and improved reliability for business-critical applications.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Built and maintained **production React single-page applications** for trading and risk workflows, supporting **500+** daily active users across global operations.
- Developed **Java backend services and REST/JSON APIs** consumed by web clients and downstream systems, preserving data consistency under high transaction volume and strict compliance requirements.
- Partnered with product, design, and engineering teams across **distributed time zones** to translate business requirements into technical designs and deliver features in **two-week agile sprints**.
- Expanded **automated test coverage** with Jest, React Testing Library, and integration suites, reducing regression defects by **35%** and supporting a steady continuous delivery cadence.
- Strengthened **application security** through authentication middleware, input validation, and hardened API patterns aligned with enterprise audit and regulatory standards.
- Refactored legacy UI modules into a **modular component architecture** with centralized state management, cutting onboarding time for new engineers and simplifying long-term maintenance.
- Optimized client data access by integrating **GraphQL and REST services** with backend teams, reducing redundant network calls by **50%** and improving responsiveness on data-heavy screens.
- Led **constructive design and code reviews**, delivering actionable feedback that raised engineering standards and accelerated knowledge sharing across the technology organization.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Developed **React components** for inventory tracking features, integrating REST APIs to deliver near real-time updates for warehouse operations teams.
- Authored **unit and integration tests** with Jest to validate component behavior and API contracts before each production release.
- Contributed to **Webpack build configuration** and linting standards, helping the team maintain consistent formatting and reliable frontend builds.
- Collaborated in **agile ceremonies** with senior engineers to prototype UI flows from product requirements and design mockups through iterative delivery.
- Resolved **cross-browser compatibility** issues in SPA routing and form validation, improving reliability for users across desktop and mobile browsers.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built **responsive web pages** with HTML, CSS, and JavaScript for nonprofit outreach campaigns, ensuring consistent rendering across devices and screen sizes.
- Integrated **third-party APIs** to synchronize donation and event data with backend services, supporting accurate reporting for foundation stakeholders.
- Implemented **UI improvements** from user feedback on navigation and layout, iterating quickly to make public-facing content easier to discover and use.
- Maintained existing **web application codebases**, fixing defects and applying security updates to keep public sites stable and current.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React.js, JavaScript, TypeScript, HTML5, CSS3, Component Architecture, State Management, React Router, Webpack, Vite, Jest, React Testing Library, Cypress, WCAG Accessibility

Backend: Java, Go, REST/JSON APIs, GraphQL, Microservices, Authentication & Authorization, API Design, Service Integration

Databases: MySQL, DynamoDB, RDS, SQL Query Optimization, Data Modeling

Cloud & DevOps: AWS (ECS, Lambda, RDS), Docker, Containerized Deployments, CI/CD Pipelines, Infrastructure as Code

Monitoring & Tools: Datadog, Application Performance Monitoring, Logging & Alerting, npm/yarn, ESLint, Prettier, Git

Workflow & PM: Agile/Scrum, Technical Mentorship, Code & Design Reviews, Cross-Functional Collaboration, AI-Assisted Development, Distributed Team Communication
