PROFESSIONAL SUMMARY

Software engineer with 8+ years delivering production Python services, React interfaces, and cloud-native integrations across finance and SaaS. Experienced building REST and GraphQL APIs, event-driven workflows, and LLM-assisted automation with secure auth and observability on AWS. Collaborates with product and UX to ship iterative, testable features with strong code review and CI/CD standards.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Owned **Python microservices** exposing REST and GraphQL APIs for portfolio analytics and reporting, standardizing contract schemas that reduced cross-team integration friction across multiple product surfaces.
- Built **LLM-assisted document workflows** with orchestration, prompt guardrails, and human-in-the-loop review to extract structured data from unstructured filings, increasing analyst throughput on high-volume processing queues.
- Translated Figma and design-system specs into **React interfaces** with reusable components, centralized state, and accessible patterns wired to backend APIs used daily by operations and research teams.
- Integrated **event-driven messaging** between internal services and external data vendors using queues and pub/sub consumers, improving reliability during peak market windows with idempotent handlers and retry policies.
- Codified **AWS deployments** with Terraform and CloudFormation for containerized services, embedding secure networking, secrets management, and promotion workflows across staging and production environments.
- Partnered with product and UX in **agile delivery cycles** tracked in Jira, decomposing platform requirements into iterative increments with clear estimates, demos, and production-ready acceptance criteria.
- Strengthened **OAuth/OIDC and RBAC** enforcement across service boundaries and expanded observability with structured logging, metrics, and tracing to accelerate diagnosis of cross-stack production incidents.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **Python backend services** supporting trade lifecycle, regulatory reporting, and internal tooling APIs consumed by front-office, risk, and compliance stakeholders across global markets.
- Replaced legacy batch interfaces with **REST/JSON endpoints** backed by SQL persistence, improving data freshness for downstream dashboards and reducing manual reconciliation steps for operations teams.
- Delivered **React configuration tooling** for reporting parameters and workflow visibility, aligning UI behavior with shared component patterns and stable API contracts used by multiple business units.
- Supported **cloud-native deployments on AWS** with containerized workloads, collaborating on secure networking, environment isolation, and release practices appropriate for regulated financial systems.
- Contributed **unit and integration tests** and active code review participation to uphold readability, secure coding standards, and release quality across a multi-team delivery train.
- Implemented **event-driven notifications** linking clearing, settlement, and reference data systems via message queues during high-volume trading periods with monitored delivery guarantees.
- Worked with business analysts and engineers to refine requirements, size backlog work, and deliver **quarterly platform releases** on schedule with documented runbooks and stakeholder sign-off.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Implemented **JavaScript and Vue features** for check-processing workflows, connecting REST APIs to partner-facing interfaces that supported daily transaction review and exception handling.

- Designed **SQL queries and data models** powering search, filtering, and reconciliation views, enabling operations staff to resolve discrepancies without direct engineering intervention.
- Participated in **code reviews and pairing** with senior engineers, improving test coverage, API error handling, and readability across a small full-stack codebase.
- Built responsive UI from wireframes with consistent component behavior across browsers, maintaining **accessible customer-facing flows** for restaurant partner onboarding and support.
- Helped automate **CI test execution** on pull requests, catching regressions earlier and shortening feedback loops for a team shipping weekly increments.
- Authored **API and onboarding documentation** that reduced ramp-up time for subsequent interns and clarified integration patterns for external partner developers.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Delivered **custom web pages and CMS-driven content** for nonprofit campaigns, enabling stakeholders to publish timely updates without engineering dependency.
- Built **responsive layouts** across marketing sites, preserving visual consistency and readable typography on mobile and desktop donor journeys.
- Improved **page load performance** through asset optimization and caching adjustments that strengthened engagement on high-traffic fundraising landing pages.
- Coordinated with distributed contributors using **Git-based workflows** for content and code changes, keeping releases organized during a fast-moving campaign cycle.
- Resolved **cross-browser defects** in styling and form behavior, maintaining accessible interactions for donation and volunteer signup experiences.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, Vue, JavaScript, TypeScript, Tailwind CSS, HTML5, CSS3, Design Systems, Responsive UI, Figma-to-Code

Backend: Python, Node.js, REST APIs, GraphQL, Event-Driven Architecture, OAuth, OIDC, RBAC, API Design

Databases: PostgreSQL, MySQL, SQL, NoSQL, Redis, Data Modeling, Persistence Patterns

Cloud & DevOps: AWS, Docker, Containerization, Orchestration, Terraform, CloudFormation, CI/CD, Cloud-Native Development

Monitoring & Tools: Logging, Metrics, Tracing, Observability, Git, Jira, LangChain, OpenAI API, Secure Coding Practices

Workflow & PM: Agile Delivery, Iterative Planning, Cross-functional Collaboration, Code Review, Technical Documentation, Stakeholder Communication
