

Ryan Cho

Full Stack AI Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full stack software engineer with 8+ years building production web applications, APIs, and data-intensive platforms across finance and enterprise SaaS. Delivers end-to-end solutions with React, Python, and cloud services, integrating ML outputs and AI-assisted workflows into usable products. Known for cross-functional collaboration, scalable architecture, and high-velocity delivery with strong engineering discipline.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Owned **end-to-end delivery** of investor-facing web applications and **RESTful APIs** that surfaced portfolio analytics, risk metrics, and model outputs to business stakeholders across multiple product pods.
- Architected **React** and **TypeScript** frontends with **Python (FastAPI)** services, establishing reusable patterns for **AI-enabled dashboards**, self-serve analytics, and secure enterprise authentication flows.
- Built **data ingestion and ETL workflows** connecting market feeds, internal datasets, and **ML model endpoints**, improving pipeline reliability and reducing manual reconciliation effort for operations teams.
- Integrated **LLM-powered features** including semantic search, document summarization, and conversational assistants into production workflows, pairing **RAG retrieval** with guardrails for accuracy and compliance review.
- Partnered with data scientists to **operationalize analytical models**, translating notebook outputs into versioned APIs, feature-serving layers, and intuitive UI experiences product owners could act on directly.
- Implemented **CI/CD pipelines**, automated testing, and **infrastructure-as-code** on **AWS**, enabling weekly releases while maintaining code review, documentation, and security standards across the stack.
- Leveraged **AI coding assistants** as a core development multiplier for prototyping, refactors, and test generation, sharing team practices that preserved quality at high iteration velocity.
- Established **observability** with structured logging, metrics, and alerting across distributed services, cutting mean time to detect production regressions and supporting on-call reliability goals.
- Mentored engineers on **full-stack architecture**, API design, and cross-layer debugging, contributing to technical reviews that shaped platform standards for scalable SaaS delivery.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **full-stack components** for internal capital markets applications, delivering **React** interfaces and **Python** backend services used by trading and operations teams daily.
- Designed and maintained **RESTful APIs** that exposed pricing, reference, and position data to downstream consumers, improving response consistency and reducing integration defects across client teams.
- Built **data-intensive workflows** and batch jobs that ingested, validated, and transformed market datasets, strengthening data quality controls for reporting and analytics pipelines.
- Collaborated with **cross-functional stakeholders** in agile delivery cycles, translating ambiguous business requirements into scoped technical milestones with clear acceptance criteria.
- Automated deployment and regression testing through **CI/CD** pipelines, shortening release cycles for critical internal tools while preserving auditability required in regulated environments.
- Contributed to **cloud-native** service hardening on **Azure**, implementing monitoring hooks and failure handling that improved uptime for high-volume internal APIs.
- Supported production incidents and **root-cause analysis**, documenting runbooks and remediation steps that reduced repeat outages for shared platform services.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Shipped **full-stack features** for a SaaS compliance platform using **React** and **Node.js**, enabling customers to configure workflows and track audit activity from a unified web console.
- Implemented **REST API** endpoints and database models that powered real-time status updates, reducing page-load latency for high-traffic dashboard views.
- Built reusable **UI components** and form validation patterns adopted by the team, improving consistency across product modules and accelerating feature development.
- Wrote unit and integration tests within the team's **CI pipeline**, catching regressions early and raising confidence for weekly production deployments.
- Participated in code reviews and sprint planning, gaining hands-on experience delivering software alongside product and design partners in an agile environment.
- Documented API contracts and onboarding guides that shortened ramp-up time for subsequent interns and junior contributors joining the codebase.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Delivered a **responsive nonprofit website** with modern HTML, CSS, and JavaScript, improving mobile usability and content discoverability for community programs.
- Integrated a **content management workflow** that allowed non-technical staff to publish updates independently, reducing reliance on developer support for routine changes.
- Optimized page performance through asset compression and lazy loading, achieving faster load times on low-bandwidth connections used by field volunteers.
- Collaborated with stakeholders to translate branding and accessibility requirements into a maintainable front-end structure suitable for long-term volunteer handoff.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, Angular, TypeScript, JavaScript, HTML5, CSS3, Next.js, responsive UI design, data visualization

Backend: Python, FastAPI, Django, Flask, Node.js, RESTful APIs, microservices, API gateway patterns

Databases: PostgreSQL, MongoDB, Redis, SQL, data warehouse integration, ETL staging layers

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, Terraform, GitHub Actions, CI/CD, infrastructure-as-code

Monitoring & Tools: Datadog, Prometheus, Grafana, structured logging, Claude Code, Codex, Augment Code

Workflow & PM: Agile, Scrum, Jira, cross-functional pods, technical documentation, code review standards
