

Ryan Cho

Senior Full Stack AI Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full-stack engineer with 8+ years delivering production web applications, REST APIs, and data-intensive platforms for finance and SaaS. Builds React and Angular interfaces, Python backend services, and cloud-native deployments with CI/CD and observability. Integrates LLM features, RAG workflows, and AI-assisted development into enterprise products with cross-functional product and data teams.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Owned end-to-end delivery of **full-stack SaaS applications** spanning React dashboards, Python FastAPI services, and PostgreSQL data layers for portfolio analytics used by investment operations teams.
- Designed and shipped **RESTful APIs and workflow services** that exposed analytical outputs to stakeholder-facing applications, reducing manual reporting cycles and improving data freshness across daily operations.
- Built **RAG-backed document search** and conversational interfaces integrated into internal tools, connecting vector stores to LLM endpoints with guardrails for secure enterprise use.
- Developed **data ingestion pipelines and ETL jobs** syncing warehouse tables, feature stores, and application databases while maintaining consistency checks and retry policies for production reliability.
- Integrated applications with **cloud lakehouse and batch processing platforms**, enabling analysts to publish model results to production APIs without bespoke handoffs between data and engineering teams.
- Implemented **CI/CD pipelines, automated testing, and observability** on AWS with infrastructure-as-code, structured logging, and alerting that improved deployment confidence across multiple release trains.
- Leveraged **AI coding assistants** as a core delivery multiplier in daily development, establishing review practices that preserved code quality, security standards, and documentation at high iteration velocity.
- Partnered with product owners, data scientists, and platform engineers in **agile cross-functional pods**, translating ambiguous requirements into scalable architecture patterns reused across AI-enabled product surfaces.
- Mentored engineers on **full-stack design reviews**, front-end performance tuning, and API contract discipline while influencing shared standards for authentication, error handling, and service boundaries.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Delivered **production-grade full-stack applications** for capital markets and risk workflows, combining Angular interfaces with Python and Java backend services serving global operations teams.
- Built and maintained **REST APIs and microservices** processing high-volume market and reference data, with schema validation, caching, and pagination patterns tuned for latency-sensitive dashboards.
- Developed **data-intensive reporting tools** connecting relational databases, message queues, and batch feeds into cohesive analyst experiences supporting regulatory and trading use cases.
- Automated **ETL and reconciliation pipelines** that validated inbound datasets, surfaced data quality exceptions, and reduced manual intervention across nightly processing windows.
- Deployed services to **cloud-native environments** with containerized workloads, blue-green releases, and environment promotion workflows aligned to enterprise security controls.
- Contributed to **CI/CD and test automation** frameworks covering unit, integration, and contract tests that increased release cadence while containing defect escape rates.
- Collaborated with business analysts and data engineering teams to **operationalize analytical models** through API-first integrations that made model outputs actionable in daily decision workflows.

- Supported **incident response and observability** improvements via centralized metrics, trace correlation, and runbooks that shortened mean time to recovery for customer-impacting outages.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Implemented **React components and form workflows** for a customer-facing web application, improving usability through responsive layouts and accessible interaction patterns.
- Built **Node.js and REST endpoints** supporting inventory and order features, with input validation and structured error responses for reliable client integrations.
- Wrote **unit and integration tests** alongside feature development, helping the team catch regressions early in agile sprint delivery.
- Participated in **code reviews and pair sessions**, learning service design conventions and front-end state management practices from senior engineers.
- Assisted with **deployment scripts and environment configuration** that streamlined staging releases for demo-ready product iterations.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive marketing and content pages** using HTML, CSS, and JavaScript, ensuring cross-browser compatibility and mobile-friendly layouts.
- Integrated **CMS-driven templates** and reusable UI components that allowed non-technical stakeholders to publish updates without engineering support.
- Optimized **page load performance** through asset compression, caching headers, and lightweight scripting that improved perceived site responsiveness.
- Coordinated with designers to translate **wireframes into production pages**, maintaining visual consistency and accessibility across the public site.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, Angular, Next.js, TypeScript, JavaScript, HTML5, CSS3, Redux, Responsive UI, Data Dashboards

Backend: Python, FastAPI, Django, Flask, Node.js, Java, REST APIs, GraphQL, Microservices

Databases: PostgreSQL, MySQL, MongoDB, Redis, Vector Stores, Data Warehousing

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, Terraform, CI/CD, Infrastructure-as-Code

Monitoring & Tools: Datadog, Prometheus, Grafana, Git, Jest, Pytest, Selenium, AI Coding Assistants

Workflow & PM: Agile, Scrum, Jira, Confluence, Cross-functional Pods, Technical Documentation
