PROFESSIONAL SUMMARY

Senior full-stack engineer with 8+ years shipping production software across finance and SaaS. Delivers end-to-end from React/Next.js UIs through Node.js services to AWS, including RAG pipelines, tool-calling agents, and eval guardrails. Turns ambiguous requirements into hardened systems with RBAC, auditability, and PII-aware data handling. Partners with strategists and senior engineers on scope, trade-offs, and fast responsible delivery.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led **end-to-end delivery** of AI-assisted portfolio analytics using **Next.js**, **Node.js**, and **PostgreSQL**, supporting investment teams across 40+ active accounts
- Designed and shipped a **RAG pipeline** with vector retrieval over fund documents, pairing **structured prompting** with guardrails that kept responses auditable for compliance review
- Built **tool-calling agent workflows** orchestrating market data APIs and internal ledger services, enabling natural-language queries with traceable execution paths
- Owned **production hardening** for LLM features including cost controls, rate limiting, fallback models, and automated eval suites before client-facing release
- Established **RBAC and secrets management** patterns for AI services handling sensitive financial data, aligning deployments with internal security standards
- Configured **CI/CD pipelines** and staging environments on **AWS**, enabling iterative rollout of full-stack features with reduced manual release overhead
- Partnered with portfolio managers and operations leads to translate **ambiguous requirements** into scoped MVPs, iterating to production quality within tight delivery windows
- Accelerated delivery using **AI-assisted development tools** while maintaining code review standards, test coverage, and TypeScript type safety across the codebase

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Delivered **full-stack trading and risk dashboards** in **React** and **TypeScript** used daily by front-office analysts across fixed-income desks
- Built **Node.js microservices** integrating real-time market feeds with internal pricing engines, supporting sub-second refresh for 200+ instrument types
- Developed **REST APIs** backed by **PostgreSQL** for trade lifecycle management, improving data consistency across downstream reporting systems
- Implemented **authentication and authorization** controls including role-based access for regulated banking workflows and audit trail logging
- Migrated legacy reporting modules to a **modern JavaScript stack**, reducing maintenance burden and enabling faster feature iteration for business users
- Collaborated with quants and business analysts in a **regulated environment**, communicating technical trade-offs on performance, security, and delivery timelines
- Automated deployment workflows with **CI/CD** and containerized services, decreasing manual release steps and production incident frequency
- Mentored junior analysts on **software engineering practices**, code review standards, and production debugging across distributed banking systems

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **React** components for a coat-check management platform, improving checkout flow responsiveness for venue staff during peak hours
- Developed **Node.js/Express** API endpoints connecting mobile clients to ticketing and inventory services used across pilot locations
- Integrated **PostgreSQL** persistence for customer and transaction records, supporting reliable data retrieval for nightly reconciliation reports
- Wrote unit and integration tests with **Jest**, catching regressions early and maintaining stability through weekly release cadence
- Participated in **Agile sprints** with product and design, delivering scoped features from wireframes to deployed production code
- Refactored legacy JavaScript modules to **TypeScript**, improving maintainability and reducing runtime errors in shared utility libraries

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed responsive **HTML/CSS/JavaScript** pages for a nonprofit fundraising site, ensuring cross-browser compatibility and mobile-first layouts
- Implemented client-side form validation and **REST API** integration for donation processing, improving submission success rates
- Optimized page load performance through **asset compression** and lazy loading, reducing initial render time for content-heavy landing pages
- Collaborated with stakeholders to translate campaign requirements into **deployable web features** within a fast-moving volunteer engineering team
- Maintained staging and production environments using **Git** workflows, supporting weekly content updates without service disruption

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, HTML5, CSS3, Redux, Tailwind CSS, Responsive Design

Backend: Node.js, NestJS, Express, REST APIs, GraphQL, Python, Microservices, LLM Integration

Databases: PostgreSQL, Redis, SQL, pgvector, Vector Stores, Query Optimization

Cloud & DevOps: AWS, GCP, Docker, Kubernetes, CI/CD, GitHub Actions, Vercel, Infrastructure as Code

Monitoring & Tools: Datadog, Sentry, OpenTelemetry, Jest, Cypress, Cursor, Git, Postman

Workflow & PM: Agile/Scrum, Jira, Confluence, Stakeholder Communication, Technical Documentation, Cross-Functional Delivery
