PROFESSIONAL SUMMARY

Full stack engineer with 9 years building production SaaS and enterprise platforms in TypeScript, Angular, and Node.js. Designs RESTful microservices and multi-tenant cloud systems on GCP and Kubernetes, with strong API design, automated testing, and cross-browser client delivery. Partners with product and stakeholders to ship stable, customer-facing features in Agile teams.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected **customer-facing Angular applications** delivered across web, desktop shells, and embedded partner contexts, strengthening adoption across a **multi-tenant SaaS portfolio** serving institutional clients.
- Built **RESTful Node.js microservices** for account workflows and analytics, reducing API latency through query tuning and **MongoDB aggregation pipelines** spanning multiple upstream data sources.
- Led **TypeScript module design** for shared UI libraries adopted by three product teams, eliminating duplicate front-end code and standardizing component contracts for **cross-browser compatibility**.
- Implemented **unit and end-to-end test suites** with Jest and Cypress, raising coverage on new features and stabilizing weekly production releases across distributed services.
- Containerized workloads with **Docker and Kubernetes on GCP**, configuring load-balanced ingress and health checks to sustain **high-availability production traffic** during peak usage windows.
- Instrumented application and API layers for **production performance metrics**, enabling faster incident triage and data-driven optimization of critical customer journeys.
- Partnered with product management on specifications, delivery estimates, and **technical documentation** for platform capabilities, aligning engineering output with roadmap priorities and stakeholder expectations.
- Drove **API design and integration patterns** for CRM-adjacent workflows, enabling secure embedding of client features in partner environments without compromising platform stability.
- Mentored engineers through **code reviews and architecture discussions**, promoting testing discipline and maintainable patterns across front-end and back-end codebases.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **TypeScript and JavaScript services** for internal banking platforms, integrating REST APIs that supported trading, reporting, and compliance workflows across distributed engineering teams.
- Built interactive **Angular dashboards** for operations analysts, presenting aggregated metrics from multiple backend sources with responsive layouts for enterprise workstations.
- Designed and maintained **MongoDB data models** for reference and reporting datasets, applying indexing and aggregation strategies that improved query reliability under peak load.
- Deployed containerized workloads to **Kubernetes clusters**, partnering with infrastructure teams on rollout strategies, secrets management, and service monitoring in cloud environments.
- Authored **engineering specifications and API documentation** for cross-functional initiatives, enabling consistent implementation across Java, .NET, and Node.js service boundaries.
- Expanded **automated test coverage** using Jest and integration harnesses, catching regressions early and supporting safer releases within Agile sprint cadences.
- Participated in sprint planning, standups, and retrospectives while coordinating with business stakeholders to translate requirements into **deliverable platform enhancements**.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Implemented **JavaScript and React features** for a document workflow product, integrating REST endpoints that streamlined customer onboarding and status tracking across remote operations.
- Built reusable **UI components** with consistent styling and validation, improving form completion consistency across desktop and mobile browsers.
- Wrote **unit tests with Jest** for critical client modules, increasing confidence in refactors and supporting faster iteration during internship sprints.
- Collaborated with senior engineers on **code reviews and Git workflows**, adopting team conventions for branching, pull requests, and deployment readiness.
- Assisted in debugging production issues by analyzing API responses and client logs, helping restore **service stability** for customer-facing workflows.
- Contributed to **Agile ceremonies** including standups and grooming sessions, translating user stories into scoped front-end tasks with clear acceptance criteria.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Delivered **responsive web pages** with HTML, CSS, and JavaScript for nonprofit programs, ensuring accessible layouts across modern browsers and mobile devices.
- Integrated lightweight **REST API consumption** for event and donation displays, enabling content updates without manual site maintenance.
- Optimized page load performance through **asset bundling and caching**, improving engagement on content-heavy landing pages.
- Partnered with stakeholders to translate program requirements into **iterative site enhancements** within a focused delivery window.
- Maintained version-controlled source with **Git**, documenting changes for handoff to foundation volunteers and future contributors.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: TypeScript, JavaScript, Angular, HTML5, CSS3, RxJS, Responsive Web Design, Cross-browser Compatibility, React

Backend: Node.js, Express, RESTful APIs, Microservices, API Design, ASP.NET, Java

Databases: MongoDB, Elasticsearch, Firebase, SQL, Data Aggregation Pipelines, Indexing Strategies

Cloud & DevOps: Google Cloud Platform (GCP), Kubernetes, Docker, CI/CD, Load Balancing, AWS, Container Orchestration

Monitoring & Tools: Jest, Mocha, Cypress, Git, Performance Instrumentation, Chrome DevTools, Nock

Workflow & PM: Agile/Scrum, Sprint Planning, Technical Documentation, Code Review, Stakeholder Collaboration, Estimation
