PROFESSIONAL SUMMARY

Full stack software engineer with seven years of experience building web applications with React, Python, and modern JavaScript. Strong background in API and data model design, automated testing, and agile delivery for both consumer-facing and enterprise platforms. Proven technical leadership through architecture ownership, code review standards, and mentoring engineers on maintainable, scalable systems.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered a **React-based investor portal** for portfolio managers across multi-asset workflows, improving dashboard responsiveness through lazy loading, code splitting, and client-side caching.
- Owned **REST API and PostgreSQL data model design** for portfolio valuation services, enabling analysts to reconcile positions and generate reports without manual spreadsheet workflows.
- Built **Python services** for document ingestion and automated compliance validation, replacing error-prone manual review steps in recurring reporting cycles.
- Established an **automated testing strategy** spanning Jest unit tests, React Testing Library integration coverage, and Playwright end-to-end suites that increased release confidence across critical user paths.
- **Mentored junior engineers** through structured code reviews and pairing sessions, raising standards for component reuse, accessibility, and test discipline across the team.
- Partnered with product and compliance stakeholders to ship **responsive, accessible UI components** aligned with evolving client-facing and regulatory requirements.
- Led migration of shared frontend modules from legacy JavaScript to **TypeScript**, reducing production defects tied to untyped data contracts between UI and service layers.
- Improved deployment reliability by extending **CI/CD pipelines** in GitHub Actions with staged rollouts, automated smoke tests, and rollback safeguards for production releases.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Delivered **React analytics dashboards** for fixed-income trading desks, surfacing risk and P&L metrics used in daily operational decision-making.
- Contributed to **web application server architecture** consolidating internal APIs with Python and Node.js services behind a unified gateway layer.
- Designed **API schemas and relational data models** for trade reporting workflows, supporting high-volume ingestion with validation at service boundaries.
- Implemented **component-driven frontends** with modern CSS patterns that standardized UX across internal tools adopted by multiple product teams.
- Wrote **performance and regression tests** for settlement and reporting paths, catching data contract breaks before they reached production environments.
- Collaborated with business analysts in **agile two-week sprints** to refine requirements, estimate work, and deliver incremental feature releases.
- Conducted **code reviews** and documented engineering standards for REST conventions, error handling, and logging adopted during analyst onboarding.
- Optimized **SQL query patterns** and caching for frequently accessed portfolio summary endpoints, reducing latency on high-traffic reporting views.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **React components** for customer-facing checkout flows, improving form validation feedback and mobile layout consistency across key conversion screens.
- Integrated **REST API calls** between frontend screens and payment services, handling edge cases in transaction status polling and error recovery.
- Wrote **unit tests** for shared utility modules and UI states, helping stabilize releases during active feature development cycles.
- Participated in **agile standups and sprint planning**, translating design mockups into implemented screens with CSS aligned to brand guidelines.
- Refactored legacy **JavaScript modules** for readability and reuse, reducing duplicate logic across admin and customer-facing views.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive web pages** for nonprofit fundraising campaigns using HTML, CSS, and JavaScript aligned to stakeholder brand requirements.
- Integrated **third-party donation APIs** into site flows, enabling secure payment capture with client-side validation and clear error messaging.
- Improved **page performance** by optimizing image assets and minifying static resources for faster load times on mobile connections.
- Collaborated with foundation leadership to iterate on **donation form UX** based on usability feedback from pilot campaign launches.
- Maintained **Git-based workflows** for feature branches and pull requests while coordinating updates with a distributed remote team.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Redux, React Testing Library, Responsive Design, Accessibility

Backend: Python, Django, Node.js, REST APIs, Microservices, API Design, Data Modeling

Databases: PostgreSQL, MySQL, Redis, SQL Query Optimization

Cloud & DevOps: AWS, Docker, Kubernetes, GitHub Actions, CI/CD, Infrastructure as Code

Monitoring & Tools: Datadog, Sentry, Git, Jira, Shortcut, Playwright, Jest

Workflow & PM: Agile/Scrum, Sprint Planning, Code Review, Technical Documentation, Cross-functional Collaboration
