PROFESSIONAL SUMMARY

Product-minded full-stack engineer with deep experience across fintech and SaaS platforms. Owns features from stakeholder conversations through React and Node.js delivery, testing, deployment, and production validation. Skilled at context-switching across domains, using data to drive decisions, and leveraging AI-assisted workflows to ship faster with higher rigor. Thrives in remote, high-ownership environments where outcomes matter more than tickets.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Owned **end-to-end feature delivery** across investor-facing portals and internal operations tools, scoping requirements directly with portfolio managers and validating business impact after each production release.
- Built **React storefront experiences** and Node.js services for account onboarding, document workflows, and self-service reporting used daily across the investment platform.
- Designed **third-party integrations** for market data, identity verification, and payment providers with resilient retry handling, idempotency guards, and structured error surfacing for operations teams.
- Architected **event-driven data pipelines** that synchronized portfolio positions and cash activity across services, cutting stale-data incidents and improving reconciliation turnaround for finance staff.
- Shipped **internal admin tooling** that replaced spreadsheet-driven workflows with searchable dashboards and bulk actions, reducing manual processing effort across multiple business lines.
- Adopted **AI-assisted engineering workflows** with Cursor and agentic tooling to parallelize implementation, generate tests, and tighten review cycles without lowering production standards.
- Instrumented production services with **feature flags, metrics, and alerting**, enabling rapid rollback and data-backed validation of pricing and UX experiments after launch.
- Diagnosed complex production issues by tracing requests through **distributed logs and SQL analysis**, restoring critical customer paths during high-volume trading periods.
- Mentored engineers on **full-stack design patterns**, deployment hygiene, and outcome-focused delivery, strengthening team velocity while keeping release quality high.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Delivered **full-stack applications** supporting trade lifecycle, treasury reporting, and risk workflows relied on by capital markets teams across global desks.
- Built **React interfaces** and Node.js microservices for internal treasury tools, improving report generation performance through query tuning, caching, and API contract refinement.
- Owned features from business analyst intake through deployment and **post-production verification** in a regulated environment with strict change-control requirements.
- Implemented **REST APIs** bridging legacy batch systems and modern web layers, giving analysts near-real-time visibility into positions without disrupting upstream settlement flows.
- Created **automated reconciliation checks** that flagged data mismatches before downstream processing, reducing manual exception handling for operations teams.
- Drove **shared authentication middleware** adopted by multiple internal product teams, standardizing access control and reducing duplicated security logic.
- Analyzed production telemetry and database query plans to isolate bottlenecks, shipping targeted fixes that improved API responsiveness under peak load.

- Partnered with compliance and security stakeholders to deliver capabilities meeting **audit and regulatory expectations** while maintaining predictable release cadence.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Contributed to **full-stack SaaS features** for restaurant compliance software using JavaScript, React, and Node.js across customer and administrative surfaces.
- Implemented **REST API endpoints** for inventory and inspection modules with unit and integration coverage on business-critical paths.
- Refactored legacy UI into **reusable React components** and shared hooks, reducing duplication and simplifying maintenance across multiple application screens.
- Integrated **webhook handlers** for payment and notification providers with idempotent processing and clear failure recovery for production reliability.
- Participated in code reviews and agile ceremonies, shipping incremental improvements on a **two-week release cadence** directly to production.
- Resolved customer-reported defects by analyzing application logs and database records, restoring expected behavior within agreed support windows.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive public web pages** for a nonprofit foundation using HTML, CSS, and JavaScript aligned to accessibility and mobile usability goals.
- Built **content update workflows** enabling non-technical staff to publish program information without developer assistance.
- Improved **page load performance** through asset optimization and lazy loading on high-traffic landing pages during fundraising periods.
- Collaborated with program stakeholders to translate outreach goals into **iterative site improvements** based on user feedback and analytics review.
- Maintained hosting configuration and deployment steps to keep the public site stable during time-sensitive campaign launches.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, JavaScript, TypeScript, HTML5, CSS3, Redux, Next.js, Responsive UI, Component Architecture

Backend: Node.js, Express, REST APIs, GraphQL, Microservices, Event-Driven Architecture, Webhooks, API Design

Databases: PostgreSQL, MongoDB, Redis, SQL Server, Query Optimization, Data Modeling, Migrations

Cloud & DevOps: AWS, Docker, CI/CD, GitHub Actions, Serverless, Infrastructure as Code, Environment Management

Monitoring & Tools: Datadog, Sentry, Structured Logging, Feature Flags, APM, Production Debugging, Git

Workflow & PM: Stakeholder Scoping, Agile Delivery, Jira, End-to-End Ownership, AI-Assisted Development, Cursor, Cross-Functional Collaboration
