PROFESSIONAL SUMMARY

Senior full stack engineer with 8+ years building secure, high-performance web platforms across finance and capital markets. Experienced architecting scalable integrations, modernizing legacy services, and shipping React and Vue experiences on robust PHP and Node backends. Drives technical alignment across distributed teams, mentors engineers through code review, and champions automated testing, Docker workflows, and database performance in production systems handling sensitive transactional data.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Owned end-to-end delivery of a **distribution-style integration platform** connecting internal portfolio systems to external data providers, eliminating manual reconciliation across daily trading operations.
- Architected and refactored **legacy monolithic services** toward containerized microservice boundaries using Docker, improving deploy independence and enabling faster release cycles for critical reporting features.
- Built responsive **React and Vue dashboards** for analysts and operations teams, standardizing shared component libraries that improved UI consistency across six internal applications.
- Designed **secure REST APIs** for financial transaction workflows with role-based access controls, encryption in transit and at rest, and audit logging aligned with regulatory expectations.
- Optimized **PostgreSQL and MySQL** query performance through composite indexing and execution-plan tuning, reducing p95 read latency on high-volume reporting tables by over 40%.
- Established **unit, integration, and end-to-end test suites** within CI pipelines, increasing deployment confidence and catching regressions before production releases.
- Led **technical design reviews** with product, compliance, and engineering stakeholders to align on architecture for new platform capabilities across a globally distributed remote team.
- Mentored **three junior engineers** through pair programming and structured code reviews, raising team standards for documentation, testing, and pull request quality.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **PHP and Java backend services** supporting trade settlement and client reporting pipelines processing thousands of daily transactions across global banking operations.
- Implemented **React interfaces** for internal operations tooling, streamlining exception-queue monitoring and settlement-status workflows for front-office analysts.
- Contributed to **microservices decomposition** of legacy batch systems, defining service contracts and phased migration sequencing that minimized downtime during production cutovers.
- Hardened applications handling **PII and financial records** through input validation, secrets management, and security remediation ahead of internal compliance audits.
- Improved **relational database performance** via schema redesign, composite indexing, and query refactoring that accelerated monthly regulatory report generation.
- Containerized development and staging environments with **Docker**, standardizing onboarding and reducing environment drift across a 12-person engineering pod.
- Partnered with business analysts and QA to deliver **automated integration tests** covering critical payment and reconciliation paths, lowering production incident frequency.
- Facilitated **cross-team architecture discussions**, translating complex backend constraints into actionable requirements for non-technical stakeholders.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **JavaScript and React features** for a document verification product, improving onboarding flow completion for restaurant compliance customers.
- Implemented **REST API integrations** between mobile clients and backend services, enabling real-time status updates for field inspectors.
- Wrote **unit and integration tests** for authentication and document upload modules, increasing coverage on business-critical user paths.
- Collaborated with senior engineers on **code reviews and production debugging**, contributing fixes that restored service availability during peak usage periods.
- Documented **API contracts and deployment steps**, supporting smoother handoffs between engineering and customer success teams.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive web pages** for a nonprofit outreach site using HTML, CSS, and JavaScript, improving mobile accessibility for community program listings.
- Integrated a **content management workflow** allowing non-technical staff to publish updates without engineering support.
- Optimized page load performance through **asset minification and caching**, delivering faster experiences on low-bandwidth connections.
- Partnered with designers to implement **accessible UI components** consistent with brand guidelines across key landing pages.
- Supported **deployment and DNS configuration** for production releases, ensuring stable uptime during fundraising campaign traffic spikes.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, Vue.js, JavaScript, TypeScript, HTML5, CSS3, Responsive Design, Component Architecture

Backend: PHP, Laravel, Node.js, Java, REST APIs, Microservices, Event-Driven Patterns, API Security

Databases: PostgreSQL, MySQL, SQL, Indexing & Query Optimization, Schema Design, Full-Text Search

Cloud & DevOps: Docker, Kubernetes, AWS, Terraform, CI/CD, Containerized Workflows, Git

Monitoring & Tools: Grafana, Datadog, Logging & Alerting, PHPUnit, Jest, Cypress, Postman

Workflow & PM: Agile/Scrum, Jira, Technical Design Reviews, Cross-Functional Collaboration, Mentorship
