

Ryan Cho

Senior Full Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full stack software engineer with 8+ years delivering scalable web applications, APIs, and internal platforms across fintech and enterprise environments. Deep expertise in React, TypeScript, Node.js, and Python with production experience across PostgreSQL, Redis, MongoDB, Docker, Kubernetes, and AWS. Led architecture decisions, CI/CD improvements, and R&D; prototypes—including AI-assisted features—while mentoring developers and partnering with product and design to ship secure, high-performance software.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered **full stack platform capabilities** spanning React/TypeScript front ends, **Node.js and Python services**, and **PostgreSQL schemas** supporting portfolio analytics workflows used daily by investment teams.
- Led **RESTful API design** and GraphQL service evaluation for internal data platforms, establishing **versioning, authentication, and rate-limiting** patterns adopted across multiple engineering squads.
- Modernized **CI/CD pipelines** with Docker, **Kubernetes deployments on AWS**, and automated **unit, integration, and end-to-end tests** that shortened release cycles while improving deployment reliability.
- Spearheaded **R&D prototyping** for AI-assisted document parsing and workflow automation, translating validated proofs-of-concept into **production-ready features** integrated into the client-facing platform.
- Optimized **application performance** across front-end bundles and back-end query paths by profiling bottlenecks, introducing **Redis caching**, and refining database indexing for data-heavy dashboards.
- Conducted **architecture and code reviews** enforcing **OWASP security practices**, encryption standards, and maintainable service boundaries; mentored **junior and mid-level engineers** through pair programming and knowledge-sharing sessions.
- Partnered with **product managers and designers** during sprint planning and discovery to shape technical solutions, producing **architecture diagrams** and internal documentation for distributed services.
- Supported **on-call rotation** and incident response, strengthening observability with structured logging and monitoring to restore service quickly and prevent recurrence.
- Evaluated **event-driven** and **WebSocket-based real-time** notification patterns for market data updates, delivering a scalable microservices approach for high-throughput data flows.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Built **full stack internal applications** with **React and JavaScript** front ends and **Java and Node.js** back-end services supporting trade operations and compliance reporting for global markets teams.
- Developed **RESTful APIs** integrating **PostgreSQL and MySQL** with downstream analytics systems, ensuring **data integrity** and audit-ready logging for regulated financial workflows.
- Implemented **automated test suites** with unit and integration coverage within **Agile/Scrum** squads, improving release confidence for mission-critical banking applications.
- Contributed to **cloud migration** proof-of-concepts on **AWS**, containerizing legacy services with **Docker** and documenting deployment runbooks for operations handoff.
- Partnered with senior engineers on **security reviews** applying authentication controls, role-based access, and encryption for sensitive client and transaction data.
- Prototyped **R&D evaluations** of modern front-end frameworks and API gateway patterns, presenting findings to engineering leadership to inform the technology roadmap.

- Accelerated feature delivery by configuring **Git branching workflows** and **CI/CD build pipelines** adopted by cross-functional product teams.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Developed **React components** and **Node.js API endpoints** for a SaaS checklist management platform, improving UI responsiveness and consistency across customer workflows.
- Wrote **unit and integration tests** for back-end services and front-end state management, increasing coverage for core authentication and data submission flows.
- Assisted in **PostgreSQL schema updates** and migration scripts supporting new feature rollouts while preserving backward compatibility for existing tenants.
- Participated in **Agile sprint ceremonies** and code reviews, refining API contracts and shared component libraries used across the engineering team.
- Integrated **third-party REST APIs** for document handling and notifications, implementing error handling and retry logic for reliable asynchronous processing.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built responsive **web pages** and interactive UI components for a nonprofit foundation site using **HTML, CSS, and JavaScript**, improving accessibility and mobile layout consistency.
- Implemented **CMS integrations** and content workflows enabling non-technical stakeholders to publish updates without developer intervention.
- Configured **Git-based version control** and deployment scripts to streamline handoffs between volunteers and the core development team.
- Collaborated with designers to translate wireframes into **production-ready front-end implementations** aligned with brand guidelines.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Redux, Vue, responsive UI design

Backend: Node.js, Python, Java, Express, RESTful APIs, GraphQL, WebSockets, microservices

Databases: PostgreSQL, MySQL, MongoDB, Redis, schema design, query optimization

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD, Terraform, Git, serverless patterns

Monitoring & Tools: Datadog, Prometheus, Grafana, Jest, Cypress, Postman, performance profiling

Workflow & PM: Agile, Scrum, Jira, Confluence, technical documentation, code review, mentoring
