PROFESSIONAL SUMMARY

Full stack software engineer with 15+ years building scalable cloud-native applications and RESTful services for storage, geospatial, and enterprise platforms. Owns reliability, security, and test coverage from design through deployment using TypeScript, Node.js, React, PostgreSQL, and AWS. Skilled in production debugging, query optimization, and AI-assisted development while collaborating with product, design, and engineering leaders in agile, cross-functional teams.

WORK EXPERIENCE

Software Engineer

Dec/2018 - Jun/2021

Thermopylae Sciences + Technology

Onsite | Chantilly, Virginia

- Led full stack delivery of **React and Node.js mapping applications** used by federal and commercial clients, translating geospatial requirements into reusable UI components and maintainable service layers.
- Designed and maintained **RESTful APIs backed by PostgreSQL**, applying indexing and query tuning that reduced report generation latency for large spatial datasets across production workloads.
- Built **automated unit, integration, and end-to-end test suites** that increased release confidence and cut regression defects during iterative feature delivery in an agile release cadence.
- Owned **production incident response and root cause analysis** for distributed geospatial services, implementing durable fixes that improved uptime and reduced repeat customer-impacting failures.
- Partnered with product managers, designers, and engineering leads to **refine feature scope, estimates, and acceptance criteria** for customer-facing platform enhancements.
- Deployed and operated services on **AWS infrastructure**, collaborating with operations stakeholders to strengthen deployment workflows, configuration management, and environment reliability.
- Championed **code review standards and secure coding practices**, mentoring teammates on testable design, API consistency, and performance-conscious implementation patterns.
- Integrated **AI-assisted development tools** into daily workflows to accelerate prototyping and refactoring while applying engineering judgment to validate generated code before merge.

Software engineer

Jul/2013 - Nov/2018

SolidFire, Inc.

Onsite | Boulder, Colorado

- Developed **backend services and RESTful APIs** for an all-flash storage management platform, enabling administrators to provision, monitor, and scale clusters serving enterprise production workloads.
- Engineered **high-throughput data access layers** with careful attention to concurrency, caching, and query efficiency to support reliable operations across distributed storage nodes.
- Implemented **comprehensive automated test coverage**, including unit and integration suites, that protected core control-plane behavior through frequent releases and platform upgrades.
- Diagnosed and resolved **complex production defects** through structured root cause analysis, log correlation, and targeted fixes that improved system stability for customer deployments.
- Drove **performance and reliability improvements** by profiling service bottlenecks, eliminating hot paths, and hardening failure handling across critical management workflows.
- Applied **security best practices** across authentication, authorization, and input validation layers to reduce exposure in externally reachable management interfaces.
- Contributed to **cross-team architectural discussions** on service boundaries, API versioning, and backward compatibility for a platform integrating storage, networking, and monitoring subsystems.
- Mentored engineers through **constructive code reviews** and pairing sessions, raising team standards for readable, testable, and maintainable backend code.

- Supported **continuous delivery practices** by improving build pipelines, deployment validation, and release checklists that shortened feedback loops for engineering and QA partners.

Software Engineer

Mar/2009 - Jun/2013

Spatial Corp

Onsite | Broomfield, Colorado

- Built **full stack features for 3D modeling SDK products**, delivering geometry processing tools and customer-facing workflows used by CAD and engineering software partners.
- Developed **RESTful service endpoints and client integrations** that exposed modeling capabilities to downstream applications while preserving backward compatibility across product releases.
- Optimized **compute-intensive geometry algorithms** to improve responsiveness for large assemblies, reducing processing time on representative customer models through profiling and targeted refactors.
- Created **reusable UI and service components** that accelerated feature delivery for multiple product lines and reduced duplicated implementation across engineering teams.
- Authored and maintained **automated regression tests** covering core modeling operations, helping the team catch integration defects before customer-facing milestone releases.
- Investigated **customer-reported production issues**, reproduced failures in controlled environments, and delivered fixes with clear validation steps for support and QA stakeholders.
- Collaborated in **agile, cross-functional delivery** with product and QA partners to prioritize enhancements, clarify requirements, and ship incremental improvements on predictable schedules.

Application Developer

Mar/2006 - Feb/2007

Verizon Business

Onsite | New York

- Implemented **web application features** for enterprise business services, contributing clean, maintainable code aligned with team coding standards and internal development guidelines.
- Supported **REST-style service integrations** and backend data access layers that connected customer-facing workflows to operational databases and legacy enterprise systems.
- Participated in **code reviews and debugging sessions**, learning established patterns for error handling, logging, and defect isolation within a distributed application portfolio.
- Wrote **unit and integration tests** for newly developed modules, helping maintain release quality as the team iterated on customer-requested enhancements.
- Coordinated with **senior developers and business analysts** to clarify requirements, estimate tasks, and deliver incremental updates in a structured agile workflow.

EDUCATION

University of Colorado Colorado Springs

Bachelor of Science, Computer Science

(

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, State Management, Component Architecture, Performance Optimization

Backend: Node.js, TypeScript, Java, Spring Boot, Kotlin, RESTful APIs, Microservices, Distributed Systems

Databases: PostgreSQL, SQL, Query Optimization, Indexing, Schema Design, Data Modeling

Cloud & DevOps: AWS, EKS, ECR, S3, SSM, Docker, CI/CD Pipelines, Cloud-Native Deployment

Monitoring & Tools: Production Debugging, Root Cause Analysis, Logging, Observability, Git, GitHub Copilot, Cursor, Claude Code

Workflow & PM: Agile/Scrum, Code Review, Technical Estimation, Cross-Functional Collaboration, Mentorship, AI-Assisted Development
