

Ryan Cho

Senior Full Stack Software Engineer

Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Software engineer with 7+ years delivering full-stack SaaS and enterprise systems using Angular, TypeScript, C#, ASP.NET Core, and PostgreSQL. Shapes scalable API and event-driven service design, guides architecture for performance and reliability, and mentors developers through reviews and design discussions. Combines strong OOP foundations with hands-on ownership from feature design through production release across capital markets and fintech platforms.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered **Angular and ASP.NET Core** features for a portfolio analytics SaaS platform serving **200+ institutional users**, owning design through production release across scheduling, reporting, and client onboarding workflows.
- Designed **RESTful APIs and event-driven services** that decoupled trade capture, reconciliation, and notification flows, reducing cross-module coupling and improving release independence across three product teams.
- Led **PostgreSQL schema and query optimization** for high-volume reporting pipelines, cutting average dashboard load times by **40%** through indexing strategy, materialized views, and careful transaction boundaries.
- Drove **architecture discussions** on service boundaries, caching, and fault tolerance with engineering leadership, influencing platform standards adopted across **12 microservices**.
- **Mentored two junior engineers** through pair programming, structured code reviews, and design doc feedback, accelerating their ability to ship independently within two quarters.
- Implemented **TypeScript** frontend modules with reusable component libraries and strict typing, improving UI consistency and reducing regression defects in shared admin surfaces.
- Partnered with product and operations stakeholders to translate **complex business rules** into maintainable domain models, delivering billing and compliance features on aggressive quarterly roadmaps.
- Established **CI/CD pipelines** and automated integration tests for API contracts, improving deployment confidence and reducing production hotfixes during peak reporting cycles.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Built **C# and .NET Core** services supporting capital markets reporting and internal workflow tools used by **150+ analysts** across fixed income and equities desks in New York.
- Developed **Angular** dashboards and internal web applications for real-time risk exposure views, integrating **REST APIs** backed by relational databases with role-based access controls.
- Contributed to **service-oriented architecture** initiatives that standardized API contracts and middleware patterns across technology groups, improving interoperability between legacy and modern stacks.
- Optimized **SQL query performance** for nightly batch reconciliation jobs processing **millions of transaction records**, reducing runtime through execution plan tuning and partition strategies.
- Collaborated in **design reviews and code reviews** with senior engineers, applying OOP principles and design patterns to improve testability and long-term maintainability of shared libraries.
- Delivered **event-driven notification pipelines** linking trade lifecycle events to downstream systems, improving data freshness for compliance and operations monitoring teams.
- Supported production **incident response and root-cause analysis** for critical banking applications, documenting fixes and preventive controls that lowered repeat outages over two release cycles.

- Coordinated with cross-functional stakeholders including business analysts and QA to ship **regulatory reporting features** on fixed deadlines, balancing scope with technical debt reduction.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Developed **JavaScript and HTML/CSS** features for a hospitality SaaS web application, improving checkout flow usability and reducing form abandonment through iterative UX refinements.
- Integrated **REST API** endpoints with frontend components for order management screens, handling validation, error states, and loading patterns consistent with production standards.
- Wrote **unit and integration tests** for shared utility modules, increasing coverage on payment-related logic and catching edge cases before sprint releases.
- Participated in **Agile sprint ceremonies** and code reviews, incorporating feedback on TypeScript typing practices and component structure from senior engineers.
- Refactored legacy jQuery views into **modular JavaScript** components, simplifying maintenance for a small engineering team and enabling faster feature iterations.
- Documented API usage and deployment steps for staging environments, supporting smoother handoffs between intern rotations and full-time developers.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built responsive **HTML, CSS, and JavaScript** pages for a nonprofit web presence, ensuring accessibility and mobile compatibility across donor and program content sections.
- Implemented CMS-driven layouts and content updates, enabling non-technical staff to publish announcements without developer intervention.
- Optimized page load performance through **asset minification and lazy loading**, improving Lighthouse performance scores for key landing pages.
- Collaborated with stakeholders to gather requirements and iterate on design mockups, delivering the site within a **10-week** engagement window.
- Configured basic **analytics and form capture** integrations to track visitor engagement and newsletter sign-ups for foundation outreach campaigns.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: Angular, TypeScript, JavaScript, HTML5, CSS3, RxJS, Responsive Design

Backend: C#, ASP.NET Core, REST APIs, SOA, Event-Driven Architecture, OOP, Design Patterns

Databases: PostgreSQL, SQL Server, Relational Modeling, Query Optimization, Stored Procedures

Cloud & DevOps: Azure, Docker, CI/CD, GitHub Actions, Infrastructure as Code, Linux

Monitoring & Tools: Application Insights, Serilog, Postman, Swagger, Git, Visual Studio

Workflow & PM: Agile/Scrum, Jira, Technical Design Docs, Code Review, Mentorship
