PROFESSIONAL SUMMARY

Full stack engineer with 7+ years delivering enterprise web and mobile systems in finance and capital markets. Skilled in Java Spring Boot microservices, React, React Native, and AWS deployments supporting high-volume transactional workloads. Applies AI-driven development practices and prompt engineering daily to improve velocity, code quality, and architectural decisions. Strong record building RESTful APIs, scalable cloud platforms, and cross-functional solutions with product owners and stakeholders.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered **React and React Native** client applications for portfolio analytics and operations workflows, enabling cross-platform access for distributed investment teams across web and mobile surfaces.
- Built and maintained **Java Spring Boot microservices** exposing RESTful APIs for trade lifecycle, reporting, and account management, supporting modular deployment and independent service scaling across production environments.
- Designed **AWS cloud infrastructure** spanning EC2, RDS, S3, and Lambda for application hosting, data persistence, and event-driven processing, reducing manual deployment steps and improving release reliability.
- Integrated **AI-assisted development workflows** into daily engineering through structured prompt engineering, accelerating feature delivery, test generation, and code review cycles without compromising production quality standards.
- Led **RESTful API design** and contract governance across frontend and backend teams, establishing versioning conventions and OpenAPI documentation adopted by three downstream consumer services.
- Optimized **MySQL query performance** and schema design for high-volume financial data retrieval, cutting average report generation latency and improving dashboard responsiveness under peak load.
- Collaborated directly with product owners on **daily delivery targets**, translating business priorities into sprint-ready technical scope and providing transparent progress updates to stakeholders.
- Mentored two junior engineers on **microservices patterns**, React component architecture, and cloud deployment practices, raising team throughput and reducing recurring code review feedback cycles.
- Implemented **CI/CD pipelines** with automated testing and staged rollouts, enabling safer production releases and faster recovery from deployment issues across the platform.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **Java Spring Boot services** for internal banking platforms processing transactional workflows, contributing to reliable back-office operations across multiple business units.
- Built **React-based dashboards** for risk and operations teams, surfacing real-time portfolio and compliance data through responsive interfaces consumed by analysts across global offices.
- Designed and documented **RESTful APIs** connecting legacy mainframe systems with modern web applications, enabling incremental modernization without disrupting critical production pipelines.
- Contributed to **microservices decomposition** of monolithic reporting modules, improving deployment independence and reducing cross-team release coordination overhead.
- Deployed application components to **AWS and Azure** cloud environments, configuring networking, identity access, and environment-specific parameters for staging and production tiers.
- Resolved **full stack production issues** spanning SQL query tuning, API error handling, and frontend state management, restoring service availability during time-sensitive trading windows.

- Automated **regression test suites** for API and UI layers, increasing release confidence and catching integration defects earlier in the development cycle.
- Partnered with senior engineers and business analysts on **technical design reviews**, presenting architecture proposals and incorporating feedback before implementation across quarterly roadmap initiatives.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Implemented **React frontend features** for an inventory management web application, delivering responsive UI components aligned with design specifications and product requirements.
- Developed **Node.js Express REST endpoints** supporting CRUD operations and authentication flows, enabling seamless data exchange between client and server layers.
- Wrote **SQL queries and schema migrations** for MySQL-backed data models, ensuring consistent data integrity across application releases and feature updates.
- Participated in **Agile sprint ceremonies** and code reviews, incorporating senior engineer feedback to improve code quality and development practices throughout the internship.
- Assisted in **AWS deployment configuration** for staging environments, gaining hands-on experience with cloud-based application hosting and environment management.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built **responsive web pages** for a nonprofit foundation site using HTML, CSS, and JavaScript, delivering accessible layouts compatible across desktop and mobile browsers.
- Integrated **third-party content APIs** to dynamically populate event listings and donation information, reducing manual content updates for foundation staff.
- Configured **version control workflows** with Git for collaborative development, enabling structured code reviews and organized feature branching across the small engineering team.
- Optimized **page load performance** through asset minification and lazy loading techniques, improving visitor engagement metrics during the organization's primary fundraising campaign.
- Collaborated with stakeholders to **translate design mockups** into production-ready web components, ensuring visual consistency and functional accuracy before public launch.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, React Native, JavaScript, TypeScript, HTML5, CSS3, Responsive Web Design

Backend: Java, Spring Boot, Python, Node.js, Express, RESTful APIs, Microservices Architecture

Databases: MySQL, PostgreSQL, SQL, Redis, Schema Design, Query Optimization

Cloud & DevOps: AWS (EC2, Lambda, S3, RDS), Azure, Docker, Kubernetes, CI/CD, Infrastructure as Code

Monitoring & Tools: Git, Jenkins, Postman, Swagger/OpenAPI, AI Development Tools, Prompt Engineering

Workflow & PM: Agile/Scrum, Jira, Code Review, Technical Mentorship, Stakeholder Collaboration
