

Ryan Cho

Senior Full Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full stack software engineer with 8 years building customer-facing web applications and lending platform features across fintech and enterprise environments. Experienced delivering end-to-end features across React frontends, API services, and microservice backends with emphasis on conversion flows, performance tuning, and experimentation. Partners effectively with product and design to ship measurable improvements in application completion, latency, and reliability at scale.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led end-to-end delivery of **borrower onboarding and funding application flows** serving thousands of monthly applicants, partnering with product and design to improve **form completion and submission rates** across multi-step journeys.
- Built and maintained **customer-facing React and TypeScript applications**, optimizing bundle size, code splitting, and render performance to reduce **page load latency** on high-traffic rate-check and document upload screens.
- Designed and implemented **RESTful microservices** in Node.js and Python powering quote, verification, and submission APIs; applied caching and connection pooling to keep **P95 response times** stable under peak lending traffic.
- Partnered with data and operations teams to ship **A/B tests and feature-flagged experiments** on conversion-critical paths, enabling controlled rollouts that validated measurable lift in **application funnel metrics**.
- Owned on-call health for assigned services; introduced **structured logging, dashboards, and alerting** on error rates and latency SLOs, reducing **mean time to detection** for production incidents.
- Refactored tightly coupled monolith modules into **independently deployable microservices**, improving release cadence and fault isolation across lending and portfolio workflows.
- Integrated third-party **KYC and credit data providers** through secure API connections, balancing regulatory data-handling requirements with sub-second user-facing response windows.
- Mentored engineers on **full-stack development patterns**, performance profiling, and code review standards, raising team throughput on cross-functional feature delivery.
- Collaborated with stakeholders to define **technical specifications** for platform funding forms supporting multiple product lines, aligning architectural direction with long-term scalability goals.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **customer-facing trading and portfolio dashboards** in React and JavaScript for institutional clients, prioritizing usability, real-time accuracy, and performance across regulated banking products.
- Implemented **Java and Python microservices** supporting trade lifecycle and reporting APIs; contributed to service decomposition that improved **deployment independence** across engineering teams.
- Built internal tooling APIs consumed by multiple frontends; standardized **authentication and authorization** patterns across services in a **high-availability financial environment**.
- Monitored production systems for **latency spikes and error-rate anomalies**, triaging incidents and coordinating remediation with infrastructure and application teams during on-call rotations.
- Partnered with product managers and business analysts to translate **compliance and regulatory requirements** into technical designs for client-facing financial workflows.
- Optimized SQL queries and data access patterns on **PostgreSQL** stores backing reporting features, reducing report generation time for operations and client-facing analytics.

- Participated in **Agile cross-functional delivery**, shipping iterative enhancements to web platforms used by global banking clients across frontend and backend layers.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Contributed to a **React-based customer portal** supporting digital receipt and inventory workflows, implementing responsive UI components aligned with design specifications.
- Assisted in building **Node.js REST endpoints** for mobile and web clients, writing unit and integration tests to improve **API reliability** across core product features.
- Resolved frontend performance bottlenecks by reducing unnecessary re-renders and optimizing asset loading on **high-traffic listing pages**.
- Collaborated with senior engineers during **code reviews**, adopting full-stack conventions and deployment practices in a fast-paced startup environment.
- Documented API contracts and component usage patterns, helping onboard new contributors to the **shared component library**.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built responsive **landing pages and donation flows** using HTML, CSS, and JavaScript, improving mobile readability across donor-facing campaign content.
- Integrated **third-party payment widgets** into the organization website, enabling secure contribution processing with minimal checkout friction.
- Maintained content updates and **cross-browser compatibility** fixes across the public site, supporting nonprofit marketing initiatives during the engagement.
- Collaborated with stakeholders to implement **analytics event tracking** on key user actions, providing visibility into visitor engagement on fundraising pages.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Responsive Design, Performance Optimization, A/B Testing, Feature Flags

Backend: Node.js, Python, Java, REST APIs, Microservices, GraphQL, Authentication & Authorization

Databases: PostgreSQL, Redis, MongoDB, SQL Query Optimization

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD Pipelines, Infrastructure as Code

Monitoring & Tools: Datadog, Grafana, Structured Logging, Error Tracking, Latency & SLO Monitoring, Git

Workflow & PM: Agile/Scrum, Cross-Functional Collaboration, Jira, Technical Specification, On-Call Operations
