PROFESSIONAL SUMMARY

Full-stack software engineer with 4+ years building customer-facing web applications in fintech and investment platforms. Experienced delivering end-to-end features across React frontends and API-driven backends, with focus on performance, reliability, and metrics-driven iteration. Strong cross-functional collaborator with Product and Design on high-traffic application journeys. Background in regulated financial services, microservices architecture, and production monitoring at scale.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led **full-stack delivery** of client-facing onboarding and funding workflows serving thousands of monthly applications, improving completion rates through iterative UX refinements and **frontend performance optimization**
- Built **React and TypeScript** interfaces optimized for Core Web Vitals, maintaining sub-second load times across high-traffic account application surfaces used by retail and institutional clients
- Designed **RESTful APIs and microservices** in Node.js and Python supporting multi-product application flows with audit-ready data consistency across regulated investor platforms
- Partnered with Product and Design on **A/B experiments and feature flags** to validate funnel changes on onboarding steps before broad rollout across three product surfaces
- Implemented **observability with Datadog** tracking latency, error rates, and SLA adherence for owned services, reducing mean time to detection during on-call rotation
- Architected **reusable form and validation components** adopted across multiple product lines, eliminating duplicated frontend logic and accelerating new flow delivery
- Mentored junior engineers on **code review standards**, testing practices, and incident response protocols for customer-facing web applications
- Drove **monolith-to-microservices migration** for account servicing endpoints, improving deploy independence, rollback safety, and long-term platform scalability
- Collaborated with **compliance and legal stakeholders** to ship regulated features on investor-facing platforms without compromising release velocity or system reliability

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **client-facing and internal web applications** on Java, Spring Boot, and React stacks supporting trading, risk, and operations teams across global capital markets
- Built **API integrations** connecting front-office applications to market data and risk systems with strict availability requirements during core trading hours
- Improved **application performance** through database query optimization, caching strategies, and frontend bundle reduction across legacy operational dashboards
- Delivered **end-to-end features** with business analysts and product owners on regulated banking workflows spanning frontend forms, backend services, and data validation layers
- Participated in **on-call rotation** monitoring production latency and error rates, resolving incidents affecting trading-hour availability across distributed services
- Implemented **automated testing and CI/CD pipelines** reducing regression risk for monthly release cycles across multiple deployment environments
- Contributed to **microservices decomposition** initiative migrating batch processing workloads to event-driven architectures with improved fault isolation

- Authored **runbooks and technical documentation** enabling faster onboarding for rotating analyst teams and reducing handoff friction during production incidents

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **customer-facing web features** in React supporting restaurant check management and payment tracking workflows used by venue staff daily
- Implemented **Node.js backend endpoints** connecting mobile-responsive UI components to PostgreSQL data stores with input validation and error handling
- Collaborated with design team to translate wireframes into **accessible, mobile-first interfaces** meeting usability standards across iOS and Android browsers
- Wrote **unit and integration tests** improving coverage for core checkout submission paths and reducing regressions during sprint releases
- Participated in **agile sprint delivery**, shipping incremental improvements to user onboarding flows based on stakeholder feedback and usage patterns

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive marketing and program pages** using HTML, CSS, and JavaScript for nonprofit outreach and community engagement initiatives
- Integrated **CMS-backed content workflows** enabling non-technical staff to publish campaign materials independently without developer intervention
- Optimized **page load performance** through asset compression and lazy loading, improving mobile visitor experience across low-bandwidth connections
- Coordinated with stakeholders on **accessibility and cross-browser compatibility** requirements for public-facing program registration pages

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Redux, Next.js, Webpack, Core Web Vitals optimization, responsive design, A/B testing

Backend: Node.js, Python, Java, Spring Boot, REST APIs, GraphQL, microservices, event-driven architecture

Databases: PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD, Terraform, GitHub Actions

Monitoring & Tools: Datadog, New Relic, Grafana, Sentry, Prometheus, Git

Workflow & PM: Agile/Scrum, Jira, cross-functional collaboration, feature flags, experimentation, stakeholder management
