

Ryan Cho

Full-Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> ·
<https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Software engineer with eight years of experience building full-stack applications, analytical tooling, and production platforms across finance and SaaS. Deep strength in algorithms, data structures, and methodical debugging to validate correctness, performance, and edge-case behavior. Skilled in JavaScript, Python, and Java with a track record of writing clear solutions, reviewing code quality, and translating complex requirements into maintainable implementations in remote, self-directed settings.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and shipped **full-stack SaaS features** across React frontends and Node.js/Python services, owning design through deployment for a portfolio analytics platform used by 40+ investment teams.
- Designed **algorithmic reconciliation workflows** for batch data processing, reducing manual review cycles by 35% through automated validation and structured error reporting.
- Built **interactive dashboards and data visualizations** with D3.js and Chart.js, enabling stakeholders to explore time-series metrics and surface anomalies without engineering support.
- Led **code review and quality standards** for a team of six engineers, identifying logic defects, performance regressions, and edge-case failures before production release.
- Diagnosed and resolved **complex production defects** spanning distributed services, database contention, and async race conditions using systematic debugging and targeted profiling.
- Optimized **API performance and query execution**, cutting p95 latency by 45% on high-traffic endpoints through indexing strategies, caching layers, and algorithm refinements.
- Implemented **automated test coverage** across unit, integration, and regression suites, maintaining 85%+ coverage on critical business logic modules.
- Mentored **junior engineers** on data structures, clean code practices, and troubleshooting techniques during pair programming and structured review sessions.
- Partnered with product and analytics teams to **translate ambiguous requirements** into well-scoped technical solutions with documented acceptance criteria and iterative delivery.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **Java and Python services** supporting internal risk and reporting platforms, delivering reliable batch jobs processing millions of records daily.
- Applied **data structures and algorithm design** to optimize trade data aggregation pipelines, improving end-to-end runtime by 30% without additional infrastructure.
- Built **React-based internal tools** for analysts to inspect portfolio exposures, integrating REST APIs and enforcing role-based access controls.
- Executed **root-cause debugging** on legacy systems, documenting reproduction steps and durable fixes for recurring production incidents across cross-functional teams.
- Authored **SQL queries and stored procedures** against Oracle and PostgreSQL databases to support regulatory reporting with auditable, repeatable outputs.
- Participated in **technical design reviews**, evaluating proposed implementations for correctness, scalability, and maintainability before sprint commitments.
- Collaborated with **global technology teams** in a remote-first environment, producing clear technical write-ups and handoff documentation for downstream support groups.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **React and Node.js features** for a hospitality management web application, contributing reusable UI components and REST endpoint integrations.
- Wrote **unit and integration tests** with Jest and Mocha, increasing coverage on core checkout flows and reducing regression defects during QA cycles.
- Debugged **front-end and API integration issues** by tracing request payloads, validating state management logic, and reproducing edge cases in local environments.
- Refactored **legacy JavaScript modules** into modular ES6 patterns, improving readability and enabling faster onboarding for subsequent intern cohorts.
- Implemented **form validation and error handling** patterns that improved input accuracy and reduced failed submission rates during peak traffic periods.
- Documented **API contracts and component usage** in team wikis, supporting consistent development practices across remote engineering contributors.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Delivered **responsive web pages** with HTML, CSS, and JavaScript for a nonprofit foundation site, ensuring cross-browser compatibility and accessible markup.
- Integrated **third-party donation widgets** and analytics tags, validating script loading behavior and error handling across staging and production environments.
- Resolved **layout and rendering defects** through browser developer tools and iterative CSS adjustments, improving mobile usability on key landing pages.
- Coordinated with **remote stakeholders** to gather content requirements and iterate on page structure within a compressed two-month delivery timeline.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, JavaScript (ES6+), TypeScript, HTML5, CSS3, D3.js, Chart.js, Responsive Web Design

Backend: Node.js, Python, Java, REST APIs, Express, Spring Boot, Microservices

Databases: PostgreSQL, Oracle, MySQL, Redis, SQL, Query Optimization

Cloud & DevOps: AWS, Docker, CI/CD (Jenkins, GitHub Actions), Linux, Terraform

Monitoring & Tools: Git, Jest, Mocha, Postman, Chrome DevTools, Profiling, ELK Stack

Workflow & PM: Agile/Scrum, Jira, Code Review, Technical Documentation, Remote Collaboration
