PROFESSIONAL SUMMARY

Full stack engineer with 7+ years building enterprise SaaS platforms across Java/Spring Boot services and React frontends on AWS. Owned end-to-end delivery from architecture through production for multi-tenant financial applications, including secure ERP integrations, workflow automation, and relational data systems on PostgreSQL and SQL Server. Experienced provisioning cloud infrastructure, CI/CD pipelines, and AI-assisted development workflows that accelerate iteration without sacrificing reliability.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered **multi-tenant SaaS modules** on **AWS** using **Java**, **Spring Boot**, and **React**, supporting document intake, validation, and approval workflows for finance operations teams.
- Designed **cloud-native infrastructure** across **EC2**, **RDS**, **S3**, and **IAM**, implementing VPC segmentation, secrets management, and **high-availability** patterns that sustained production stability during peak processing windows.
- Built **REST API** and **event-driven integrations** connecting internal platforms with external ERP and accounting systems, standardizing validation rules and reconciliation flows across tenant boundaries.
- Developed responsive **TypeScript/React** interfaces with **Tailwind CSS** and **Bootstrap**, partnering with product stakeholders to refine usability for complex approval and exception-handling scenarios.
- Optimized **PostgreSQL** and **SQL Server** schemas, indexing strategies, and query plans for high-volume transactional workloads, improving report turnaround for operations analysts.
- Established **CI/CD pipelines** with **Docker**, **Jenkins**, and automated test gates, enabling repeatable deployments and faster rollback during incident response.
- Led **L3 production support** using **CloudWatch** dashboards, structured logging, and runbooks, diagnosing performance bottlenecks and resolving cross-service failures across Linux-hosted services.
- Mentored engineers on **full stack ownership**, code review standards, and **AI-assisted development** practices that improved delivery throughput while maintaining architectural consistency.
- Embedded **AI tooling** into engineering workflows and product features to accelerate data extraction, classification, and developer productivity across greenfield service builds.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Delivered **enterprise Java** applications on **Spring Boot** for capital markets and operations tooling, supporting secure data exchange across regulated banking environments.
- Implemented **React** and **JavaScript** dashboards consumed by technology and business analysts, translating compliance requirements into intuitive operational views.
- Provisioned and maintained **AWS** resources including **EC2**, **S3**, and **CloudWatch** for internal platform services, applying least-privilege **IAM** controls and environment isolation.
- Designed **relational database** models in **PostgreSQL** and **SQL Server**, supporting audit trails, batch reconciliation, and regulatory reporting pipelines.
- Built **RESTful services** and file-based interfaces integrating upstream trading, risk, and finance systems with consistent validation and error-handling contracts.
- Contributed to **CI/CD** automation and deployment runbooks that reduced release friction across development, UAT, and production promotion stages.
- Supported **production troubleshooting** and performance tuning for Linux-hosted services, collaborating with infrastructure teams on incident resolution and capacity planning.

- Participated in **Agile** delivery using **Jira**, breaking down cross-team initiatives and communicating technical tradeoffs to product and operations stakeholders.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Developed **React** and **JavaScript** features for a document verification platform, improving form validation and responsive layouts for mobile reviewers.
- Built **Java/Spring Boot** API endpoints supporting authentication flows and metadata persistence backed by **PostgreSQL**.
- Assisted in configuring **AWS S3** storage and environment-specific deployment settings for staging and demo releases.
- Wrote unit and integration tests and contributed to **Docker**-based local development setup used by the engineering team.
- Collaborated in **Agile** ceremonies, translating bug reports into scoped fixes with mentorship from senior engineers.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built **JavaScript** and **HTML/CSS** web pages for a nonprofit foundation site, implementing responsive layouts and content updates requested by stakeholders.
- Integrated lightweight **backend scripts** and form handling to capture visitor inquiries and route submissions to operations staff.
- Configured hosting and basic **CI** steps to publish static assets and monitor uptime for campaign launches.
- Partnered with designers to align typography, spacing, and navigation patterns for accessibility across desktop and mobile browsers.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, Tailwind CSS, Bootstrap, Thymeleaf, HTML5, CSS3, Responsive Web Design

Backend: Java, Spring Boot, Python, REST APIs, Event-Driven Architecture, Microservices

Databases: PostgreSQL, SQL Server, Relational Schema Design, Query Optimization, AWS RDS/Aurora

Cloud & DevOps: AWS (EC2, RDS, S3, IAM, VPC, CloudWatch, Secrets Manager), Docker, Jenkins, CI/CD, Linux, Windows

Monitoring & Tools: CloudWatch, Structured Logging, Git, GitHub Copilot, AI-Assisted Development, Incident Response

Workflow & PM: Agile, Scrum, Jira, Cross-Functional Collaboration, Technical Mentorship, Architecture Ownership
