

Ryan Cho

Senior Full Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full stack software engineer with eight years building production web applications for financial services and investment platforms. Owns React and Node.js features end to end—from API design and microservices integration through AWS serverless deployment, observability, and release automation. Experienced with PostgreSQL, SQL Server, and DynamoDB at scale, DevSecOps pipelines in Azure DevOps, and cross-team delivery of secure, high-availability systems.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Owned **end-to-end feature delivery** for investor-facing portfolio dashboards using **React** and **Node.js**, coordinating with product and compliance from requirements through production release.
- Architected **microservices-backed REST and GraphQL APIs** on **AWS Lambda** and API Gateway, reducing coupling between reporting, trade capture, and notification services across the platform.
- Designed and maintained **CI/CD pipelines** in Azure DevOps with automated testing, security scanning, and staged deployments that accelerated release cadence for multiple production teams.
- Resolved **performance bottlenecks** in PostgreSQL query paths and API response layers, improving load times for high-traffic portfolio views used by institutional clients.
- Hardened application security by addressing **OWASP vulnerabilities**, implementing input validation, and integrating secret management for services handling sensitive financial data.
- Built **serverless data ingestion** workflows with DynamoDB and S3, enabling near-real-time synchronization of market data feeds into downstream analytics components.
- Partnered with infrastructure and architecture groups to align new services with **enterprise architecture standards**, documenting service contracts and integration patterns for shared platform use.
- Mentored two junior engineers on **full stack development practices**, code review standards, and production debugging techniques during sprint delivery.
- Led cross-functional troubleshooting of **production stability issues**, establishing runbooks and enhanced CloudWatch alerting that shortened incident recovery time.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Delivered **Java and Node.js services** supporting trade processing and risk reporting workflows within a regulated banking environment, adhering to enterprise release controls.
- Implemented **RESTful and SOAP integrations** between internal platforms and third-party market data providers, standardizing payload schemas and error handling across teams.
- Optimized **SQL Server stored procedures** and application queries tied to daily batch reporting, improving reliability of time-sensitive end-of-day processes.
- Contributed to **microservices decomposition** of a legacy monolith, extracting bounded contexts behind API gateways while preserving backward-compatible client contracts.
- Automated build and deployment stages through **DevSecOps pipelines** with unit, integration, and static analysis gates integrated into Azure DevOps release workflows.
- Collaborated with business analysts and QA to translate regulatory requirements into **testable software specifications** and traceable delivery milestones across agile sprints.
- Developed internal tooling in **Python** to streamline data reconciliation and exception tracking, reducing manual effort for operations teams during month-end close.

- Participated in **cross-functional design reviews** for API security, authentication flows, and data protection controls aligned with internal cybersecurity policies.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **React components** for a customer-facing inspection management portal, improving form validation and state management patterns under senior engineer guidance.
- Developed **Node.js REST endpoints** connected to PostgreSQL for inspection records, following team conventions for routing, middleware, and error responses.
- Wrote unit and integration tests with **Jest**, increasing coverage on critical API paths prior to production deployment.
- Assisted with **CI pipeline configuration** for automated linting and test execution on pull requests.
- Refactored legacy UI modules to improve **accessibility and responsive layout** across desktop and tablet breakpoints.
- Documented API contracts and local development setup to support **onboarding of new contributors** to the codebase.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive web pages** for a nonprofit fundraising site using HTML, CSS, and JavaScript, delivering layouts aligned with stakeholder branding requirements.
- Integrated a **third-party donation widget** and contact forms, validating submissions and routing leads to backend mail handlers.
- Optimized **page performance and SEO basics** through asset minification, semantic markup, and metadata configuration ahead of a public launch deadline.
- Coordinated with remote stakeholders through iterative reviews to ship **production-ready content updates** within a compressed two-month engagement window.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript (ES6+), HTML5, CSS3, Redux, Next.js, Responsive Design

Backend: Node.js, Java, Python, Express.js, GraphQL, RESTful APIs, SOAP, Microservices

Databases: PostgreSQL, SQL Server, DynamoDB, Redis

Cloud & DevOps: AWS (Lambda, API Gateway, S3, CloudFormation), Serverless Computing, Docker, CI/CD, DevSecOps

Monitoring & Tools: CloudWatch, Datadog, SonarQube, Jest, Postman, Git

Workflow & PM: Azure DevOps, Agile/Scrum, Jira, Cross-functional Collaboration
