

Ryan Cho

Senior Full Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Senior full stack engineer with 7+ years building production SaaS and fintech products, real-time data pipelines, and cloud-native services on AWS. Proficient across Node.js, Python, Java, Vue.js, and React with strong API design and relational/non-relational data modeling. Partners with product and design to prototype quickly, ship incremental value, and communicate system trade-offs clearly. Mentors through code review and pairing, and uses AI development tools to raise team velocity and quality.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Owned end-to-end delivery of a **real-time portfolio analytics platform** processing market and position updates for 200+ institutional users, reducing dashboard refresh latency from minutes to **sub-second updates** across exposure views
- Designed and built **Vue.js** frontends and **Node.js APIs** that let portfolio managers configure alerts, drill into holdings, and export reconciled positions without operations handoffs
- Architected **event-driven ingestion pipelines** on AWS using SQS, Lambda, and DynamoDB streams to normalize vendor feeds and persist auditable snapshots for downstream risk workflows
- Partnered with Product and Design to **prototype and validate** allocation workflow changes in focused spikes, converting high-risk concepts into production releases with measurable adoption
- Modeled **PostgreSQL and MongoDB** schemas for holdings, transactions, and reference data, balancing query performance, migration safety, and reporting flexibility across tenant boundaries
- Led **code reviews and pairing sessions** for a six-engineer squad, improving pull request turnaround and catching pricing regressions before release windows
- Documented **system design decisions** for pricing engines and caching layers, enabling faster onboarding and reducing repeated architecture debates during planning
- Integrated **AI-assisted development workflows** into daily delivery for test generation, refactors, and documentation while maintaining strict review standards
- Built observability with **CloudWatch metrics and structured logging** to trace pipeline failures, cutting mean time to diagnose ingestion incidents during market hours

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Built **Java and Python microservices** exposing REST APIs for trade lifecycle, settlements, and regulatory reporting used by front-office and operations teams across global markets
- Developed **real-time market data consumers** that ingested pricing feeds, normalized symbology, and published enriched ticks to internal distribution buses serving downstream risk systems
- Implemented **SQL Server and Oracle** data models for trade repositories, enforcing referential integrity and audit trails required for SOX-controlled reporting workflows
- Partnered with cross-functional stakeholders to **break down complex initiatives** into incremental releases, demoing progress in sprint reviews and adjusting scope based on compliance feedback
- Prototyped **Python tooling** to automate reconciliation exceptions, replacing manual spreadsheet checks and accelerating analyst review during month-end close
- Contributed to **cloud migration assessments** for legacy batch jobs, identifying containerized AWS workload candidates and documenting dependency risks for architecture review

- Participated in **blameless retrospectives** and incident reviews, proposing test coverage and monitoring improvements that reduced repeat production defects in allocation services
- Mentored **summer analysts** through pairing on API integrations and SQL tuning, helping them deliver first production contributions within onboarding timelines

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Shipped **full-stack features** for a restaurant payment platform using JavaScript, enabling hosts to reconcile guest checks against POS exports in near real time
- Built and consumed **REST APIs** connecting mobile clients to inventory and tab management services, adding validation and error handling for unreliable network conditions
- Implemented **MySQL-backed persistence** for ticket metadata and audit logs, supporting paginated queries used by operations dashboards
- Collaborated with product stakeholders in **weekly demos**, iterating UI flows based on feedback from venue pilots across NYC locations
- Wrote unit and integration tests around **payment state transitions**, preventing regressions as the team expanded supported hardware integrations
- Refactored legacy jQuery views toward **component-style JavaScript**, improving maintainability for engineers joining mid-release cycles

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Delivered a **responsive nonprofit web presence** with donation flows and event pages, supporting a year-end fundraising campaign with stable checkout completion
- Integrated **third-party payment APIs** with server-side validation, keeping PCI-sensitive handling out of client-side scripts
- Optimized page load performance through **asset bundling and caching**, improving mobile performance scores for content-heavy landing pages
- Coordinated with foundation leadership to **translate program requirements** into publishable content structures editors could update without engineering support
- Established **CI deploy hooks** to staging, reducing manual FTP releases and preventing partial uploads during content launches

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: Vue.js, React, JavaScript, TypeScript, HTML5, CSS3, Responsive UI, Component Architecture

Backend: Node.js, Python, Java, REST APIs, Event-Driven Processing, Microservices

Databases: PostgreSQL, MySQL, MongoDB, Redis, SQL Server, Oracle, Schema Design, Data Modeling

Cloud & DevOps: AWS (Lambda, SQS, S3, EC2, DynamoDB), Docker, CI/CD, Infrastructure as Code

Monitoring & Tools: CloudWatch, Structured Logging, Git, AI-Assisted Development, Postman

Workflow & PM: Agile/Scrum, Cross-Functional Collaboration, Technical Documentation, Jira, Prototyping
