

Ryan Cho

Senior Full Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full stack software engineer with 4+ years building production Python services and React applications for financial and enterprise platforms. Experienced delivering LLM-assisted workflows, REST and GraphQL APIs, and AWS-hosted infrastructure. Owns features end to end—from backend integration and data modeling through accessible, design-system-aligned UI—and collaborates closely with product and UX in agile environments.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led **full stack ownership** of Python services and React applications supporting portfolio operations tooling used daily by investment, compliance, and reporting teams.
- Architected **REST and GraphQL API layers** with OAuth/OIDC authentication and RBAC, standardizing secure access patterns across multiple internal and partner-facing product surfaces.
- Integrated **LLM-assisted document processing** into production pipelines using Python and cloud-hosted model APIs, with prompt validation, guardrails, and human-in-the-loop review controls.
- Implemented **event-driven ingestion workflows** with queue-backed workers and idempotent handlers, improving reliability for high-volume financial data synchronization across 15+ upstream systems.
- Delivered **design-system-aligned React interfaces** from wireframes and component specifications, wiring API state, form validation, and accessible interaction patterns for complex operational UIs.
- Provisioned **AWS infrastructure with Terraform** and hardened CI/CD release gates across four environments, enabling repeatable deployments and reducing release lead time from days to hours.
- Drove **cross-team technical design** with product and UX stakeholders, breaking down ambiguous requirements into iterative backlog increments tracked in Jira and delivered through two-week sprints.
- Established **observability standards** with structured logging, metrics dashboards, and integration tests spanning backend services and frontend behavior, shortening production incident diagnosis cycles.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Built **production Python services** supporting capital markets analytics, replacing brittle batch scripts with maintainable APIs consumed by downstream reporting and risk applications.
- Developed **REST/JSON integration endpoints** connecting internal trading, reference data, and risk systems, reducing manual data handoffs between operational groups across three business lines.
- Designed **relational data models** and optimized SQL queries for regulatory reporting datasets spanning millions of records with audit-friendly change tracking and reconciliation checks.
- Contributed to **React and JavaScript dashboards** for analyst-facing workflows, pairing responsive UI implementation with backend API contracts, pagination, and export capabilities.
- Participated in **agile delivery cycles** with sprint planning, estimation, and peer code reviews, shipping incremental value for technology modernization initiatives over consecutive release trains.
- Implemented **authentication and authorization checks** aligned with enterprise security policies, including service-to-service tokens and least-privilege access controls for sensitive market data.
- Supported **cloud migration efforts** toward AWS-hosted shared services, containerizing legacy components and validating performance under production load profiles before cutover.
- Documented **API specifications and integration runbooks** for partner engineering teams, improving onboarding speed and reducing recurring support escalations during release windows.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Developed **JavaScript and React features** for customer-facing web applications, implementing UI components from design mocks with consistent styling and client-side validation.
- Assisted in building **Python backend endpoints** for user account and transaction workflows, pairing unit tests with REST contract documentation shared across the engineering team.
- Integrated **third-party API connections** for payment and notification services, handling error states and retry logic in development and staging environments.
- Collaborated with senior engineers in **code reviews and sprint demos**, gaining exposure to agile backlog grooming and iterative feature delivery practices.
- Improved **frontend test coverage** with component and integration tests, catching regressions before releases to production-like staging environments.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built **responsive web pages** with HTML, CSS, and JavaScript for nonprofit outreach campaigns, ensuring cross-browser compatibility and mobile-friendly layouts.
- Implemented **content management updates** and form integrations, enabling staff to publish event information without developer intervention.
- Optimized **page load performance** through asset minification and lazy loading, improving visitor engagement on foundation landing pages.
- Coordinated with stakeholders on **wireframe revisions** and specification gathering, translating feedback into incremental site updates within tight deadlines.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, JavaScript, TypeScript, Vue.js, AngularJS, HTML/CSS, Tailwind CSS, Responsive Design, Component Libraries, Accessibility

Backend: Python, REST APIs, GraphQL, JSON, FastAPI, Node.js, OAuth/OIDC, RBAC, Event-Driven Architecture, LangChain

Databases: PostgreSQL, SQL, NoSQL (MongoDB, DynamoDB), Redis, Data Modeling, Query Optimization

Cloud & DevOps: AWS (ECS, Lambda, Bedrock, S3), Docker, Kubernetes, Terraform, CI/CD, GitHub Actions, Container Orchestration

Monitoring & Tools: CloudWatch, Datadog, Structured Logging, Distributed Tracing, Unit/Integration Testing, Postman

Workflow & PM: Agile, Jira, Specification Gathering, Cross-Functional Collaboration, Code Review, Technical Documentation
