PROFESSIONAL SUMMARY

Full stack software engineer with 8+ years delivering TypeScript, React, Next.js, and Node.js applications across fintech and enterprise settings. Built REST APIs, SQL data layers, and AWS-backed services while collaborating through GitLab on deadline-driven releases. Applies algorithmic problem-solving and vertical-slice delivery to ship reliable full stack features from design through production.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected **full stack trading workflows** in TypeScript, React, and Next.js, delivering vertical slices from UI prototypes through production releases for portfolio operations teams.
- Built and maintained **RESTful Node.js and Express services** with PostgreSQL persistence, using Postman collections to validate contracts before each deployment cycle.
- Deployed **AWS-backed production builds** with containerized services, improving release reliability for time-sensitive financial reporting under tight deadlines.
- Led **cross-team design sessions** to brainstorm optimization strategies for portfolio reconciliation, translating algorithmic requirements into maintainable service boundaries.
- Integrated **Python analytics scripts** with SQL query pipelines to retrieve, store, and audit market data safely across distributed back-end components.
- Mentored two engineers on **GitLab-based collaboration** practices, including merge request reviews, branch strategies, and clear deadline communication with stakeholders.
- Refactored legacy monolith modules into **horizontal API slices**, reducing coupling and enabling parallel feature delivery across front-end and back-end squads.
- Implemented **mobile-responsive web interfaces** and shared component libraries that standardized UX patterns across multiple investor-facing dashboards.
- Established **CI validation gates** for TypeScript builds and API regression checks, catching integration defects before production handoff.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **full stack internal tools** with React, Node.js, and Express, supporting trading and risk teams across three business units in a regulated enterprise environment.
- Designed **RESTful APIs** for trade lifecycle data, documenting endpoints and debugging failures with Postman during iterative release cycles.
- Wrote **Python and SQL modules** to extract, transform, and persist settlement records while enforcing safe parameterized access patterns.
- Shipped **vertical feature slices** from requirements workshops through production deployment, coordinating deadlines and blockers with distributed teammates.
- Researched **algorithmic optimization approaches** for batch reconciliation jobs, reducing processing complexity through smarter scheduling and indexed query design.
- Collaborated via **GitLab workflows** on shared codebases, participating in design reviews and group brainstorming sessions for new engineering solutions.
- Built **Next.js dashboards** that surfaced operational metrics, helping analysts monitor pipeline health and respond to production incidents faster.

- Automated **AWS deployment scripts** for staging environments, enabling repeatable production build promotion with environment-specific configuration.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Contributed to **React and TypeScript web features** for restaurant payment workflows, implementing UI components aligned with design specifications and API contracts.
- Assisted in building **Node.js REST endpoints** backed by SQL databases, learning safe data retrieval and storage patterns under senior engineer guidance.
- Participated in **GitLab merge requests** and daily standups, communicating progress, deadlines, and blockers clearly with the development team.
- Tested API integrations using **Postman**, documenting edge cases discovered during QA and supporting faster debugging cycles.
- Supported **production build deployments** to staging environments, helping validate full stack changes before customer-facing releases.
- Explored **algorithmic improvements** for check-splitting logic, proposing approaches discussed in team innovation sessions.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built **responsive web pages** with HTML, CSS, and JavaScript for nonprofit program outreach, improving accessibility across mobile and desktop browsers.
- Implemented **client-side forms** connected to back-end endpoints, enabling safe submission handling for community registration workflows.
- Collaborated with teammates on **tight deadline deliverables**, tracking tasks and communicating needs during a fast-paced remote engagement.
- Applied foundational **computer science concepts** to structure page logic and optimize simple data rendering patterns.
- Participated in **group brainstorming sessions** to explore new presentation approaches for foundation initiatives and donor content.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: TypeScript, React, Next.js, JavaScript, HTML5, CSS3, Responsive Web Design, Component Libraries

Backend: Node.js, Express, Python, RESTful APIs, Microservices, Server-Side Rendering

Databases: PostgreSQL, SQL, Query Optimization, Parameterized Queries, Data Modeling

Cloud & DevOps: AWS, Docker, CI/CD Pipelines, Containerized Deployments, Environment Configuration

Monitoring & Tools: Postman, GitLab, API Testing, Debugging, Build Automation

Workflow & PM: Agile Delivery, Vertical Slices, Cross-Functional Collaboration, Code Review, Mentorship
