

Ryan Cho

Software Engineer — Platform & Cloud Systems

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> ·
<https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Software engineer with 6+ years delivering scalable, maintainable systems across financial services and enterprise platforms. Skilled in full-stack development, cloud deployment on GCP and Azure, and automated CI/CD workflows. Combines rigorous testing practices—including integration and performance validation—with clean, well-documented code. Collaborates effectively across teams, mentors peers through code reviews, and monitors production systems to resolve issues before they impact users.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected **cloud-native microservices** on GCP supporting portfolio analytics workflows used daily by investment teams across multiple business units
- Built **CI/CD pipelines** with GitHub Actions and Docker, cutting release lead time from multi-day cycles to same-day deployments with rollback-safe promotion gates
- Led **system integration testing** across frontend, API, and data layers, establishing regression suites that blocked defects before production releases
- Designed **RESTful APIs** and event-driven processing for high-volume financial data pipelines requiring consistent throughput and fault-tolerant retry behavior
- Conducted **code reviews** and mentored junior engineers on testing standards, secure coding practices, and maintainable service boundaries
- Implemented **proactive production monitoring** with centralized logging and alerting, improving incident detection and shortening recovery cycles for critical services
- Authored and maintained **system design documentation**, API specifications, and deployment runbooks referenced by engineering, QA, and operations stakeholders
- Refactored legacy reporting modules into **modular, testable services**, raising automated test coverage and reducing recurring production defects in downstream consumers

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed and maintained **enterprise banking applications** supporting trade operations, regulatory reporting, and internal tooling across global markets infrastructure
- Integrated **Azure cloud services** with on-premise systems to enable secure, auditable data exchange between upstream trading platforms and downstream consumer applications
- Automated **CI/CD workflows** using Git and Jenkins, standardizing build, test, and release processes across multiple development squads
- Executed **system integration and performance testing** for payment and reconciliation systems ahead of scheduled release windows and change-advisory approvals
- Administered **Linux and Windows server environments**, diagnosing network, OS, and database connectivity issues in multi-tier production and staging deployments
- Optimized **SQL queries and database indexing** for batch reconciliation jobs, reducing runtime on large transaction tables without altering business logic contracts
- Collaborated with **cross-functional teams** including QA, infrastructure, and business analysts to deliver features aligned with compliance and operational requirements
- Produced **technical documentation** for system architecture, deployment procedures, and incident response playbooks adopted by operations and support teams

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **full-stack web features** with React and Node.js for a restaurant technology platform serving venue partners nationwide
- Wrote **unit and integration tests** using Jest and Cypress, expanding frontend coverage and catching regressions during active feature development
- Participated in **code reviews** and pair programming sessions, contributing feedback on API contracts and reusable UI component design
- Implemented **REST API endpoints** for order-management workflows backed by PostgreSQL, following established schema and validation conventions
- Deployed updates through **Git-based CI pipelines** with branch protection, peer review, and automated test gates before merge to main
- Documented **API contracts and local setup guides** in Confluence to accelerate onboarding for new engineering contributors

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive web pages** for a nonprofit foundation site using HTML, CSS, and JavaScript aligned to brand and accessibility guidelines
- Integrated **third-party donation APIs** to streamline online contribution flows for community fundraising campaigns
- Performed **cross-browser testing** and defect fixes to ensure consistent layout and behavior across desktop and mobile viewports
- Collaborated with **remote stakeholders** to gather requirements and iterate on content management and publishing workflows
- Managed source changes with **Git version control**, using feature branches and descriptive commits for all deliverables

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Responsive Design, Component Architecture

Backend: Python, Java, Node.js, REST APIs, Microservices, Event-Driven Architecture

Databases: PostgreSQL, MySQL, MongoDB, SQL, Query Optimization, Schema Design

Cloud & DevOps: Google Cloud Platform, Microsoft Azure, Docker, Kubernetes, Git, GitHub Actions, Jenkins, CI/CD

Monitoring & Tools: Centralized Logging, Application Monitoring, Performance Profiling, Grafana, Alerting

Workflow & PM: Agile, Scrum, Jira, Confluence, Technical Documentation, Code Review, Cross-Functional Collaboration
